# INTRODUCTION

This project is funded in part by a grant from the National Park Service's Emergency Supplemental Historic Preservation Fund and managed and administered by the Texas Historical Commission (THC). Through the grant, the THC aims to fund projects that promote preservation planning and the documentation and rehabilitation of historic resources in areas affected by Hurricane Harvey. As part of this effort, the THC awarded the Jefferson County Historical Commission a grant to prepare a historic resources survey plan, historic resources survey, and a historic preservation plan.

Jefferson County has a long history of damage from hurricanes and floods, including Hurricane Harvey in 2017 and Hurricanes Ike (2008) and Rita (2005). Hurricane Harvey alone caused an estimated $2.2 billion of damage, flooding over 15,000 homes and wiping out critical infrastructure across Jefferson County. Future climate projections anticipate more frequent, stronger storms and floods in coming decades. Though hurricane damage in 2017 was widespread across the county, this project focuses on the areas outside of Beaumont and Port Arthur, where historic preservation efforts have been limited. Historically, much of the preservation work in the county has focused on Beaumont and Port Arthur, both designated Certified Local Governments. As a result, historic resources in the county's smaller cities and unincorporated and rural areas have largely gone undocumented, leaving them in danger of being lost. The goals of this project are to document as many above-ground historic-age properties in these areas of Jefferson County as possible, to assess the damage of past storms, and to integrate this information into a preservation plan that will help Jefferson County respond to future storms' impact on historic resources.

# HISTORIC CONTEXT OF JEFFERSON COUNTY

The goal of this historic context is to create a framework for evaluating the significance of historic-age resources for their associations with broad historic themes and trends. The context within is structured chronologically by era. Within each era, selected significant contextual themes are discussed. This historic context will be used to evaluate the potential significance of the resources surveyed during the historic resources survey phase of this project. Because the survey area does not include Beaumont and Port Arthur, this historic context does not delve deeply into development within these cities. Instead, the historic context focuses only on broad trends associated with these cities, concentrating on the historic context and development of small towns and unincorporated areas in Jefferson County. The contextual themes selected represent the trends most commonly associated with historic resources in Jefferson County based on research to date, although future research may bring additional significant trends to light.

# GEOGRAPHIC SKETCH

## GENERAL DESCRIPTION

Jefferson County lies in southeast Texas in the Coastal Plains (Figure 1). The Gulf of Mexico forms the county's southern border, Pine Island Bayou its northern border with Hardin County, and the Neches River, Sabine Lake, and Sabine Pass separate the county from Orange County and Louisiana to the east. Only Jefferson County's western border, with Liberty and Chambers counties, is a solid landmass (Figure 2). Jefferson County encompasses approximately 937 square miles.[1] As of 2021, the county had a population of around 251,000.[1] More than half of the population lives in the county's two largest cities: Beaumont and Port Arthur. Both cities are in the eastern section of the county; Beaumont is on the Neches River in the northeast portion of the county, and Port Arthur on Sabine Lake is in the southeastern portion. Smaller cities and areas of development occupy the area between Beaumont and Port Arthur, while the rest of the county is rural, characterized by unincorporated areas and small cities with populations fewer than 2,500 people. The southern section of the county is the least populated and is generally defined by parks and wildlife refuges including Sea Rim State Park, McFaddin National Wildlife Refuge, Texas Point National Wildlife Refuge, Candy Cain Abshier Wildlife Management Area, Big Hill Bayou Wildlife Management Area, and J. D. Murphee State Wildlife Management Area. Interstate Highway 10 traverses the northern section of the county northeast-southwest, US Highways 90 and 96 run through the northern section of the county, and State Highway 73 serves the central part of Jefferson County. In eastern Jefferson County, the main thoroughfares include State Highway 347, US Highway 69, and State Highway 87. A network of county and local roads service the southern third of the county.

[1] Historical records provide larger numbers, including 1,000, 956, and 945 square miles. The decrease in size may be due to measuring errors or differences, or possibly a loss of land due to rising waters over the years.

# GEOGRAPHY AND TOPOGRAPHY

## Topography

Jefferson County falls within the Coastal Plains region of Texas. Land is relatively flat, and the elevation ranges from sea level along the coast to around 50 feet above sea level in the northern part of the county.[2] Though generally flat, abrupt elevation increases up to around 15 feet are produced by protruding salt domes at and near Spindletop and Big Hill. Salt domes are mounds seeped with sulfur and natural gas. Other areas of slight elevation include bluffs and sloping banks found along the county's myriad waterways.

## Waterways

The principal waterways in Jefferson County are the Neches River and Sabine Lake, both on the eastern border and emptying into the Gulf of Mexico. The Neches River starts approximately 416 miles northwest of Jefferson County in Van Zandt County. Before feeding into Sabine Lake, the river in Jefferson County cuts through flat terrain. The river is between 20 and 40 feet deep and has gentle banks, lined with trees in some areas. Both the Neches River and the Sabine River (flowing from the northeast) feed into Sabine Lake near Port Arthur. Sabine Lake lies half in Texas and half in Louisiana. The lake is approximately 14 miles long and 7 miles wide. Land along the lake is a mixture of sandy and marshy.[3] Sabine Pass connects the lake with the Gulf of Mexico. Together, the Neches River, Sabine River, Sabine Lake, and Sabine Pass are known as the Sabine-Neches Waterway (Figure 3). The waterway—a network of interconnected manmade canals, channels, and turning basins protected by jetties in places—is the result of interventions dating from the nineteenth and twentieth centuries. The efforts created over 40 miles of navigable waterways up both the Neches and Sabine rivers and supported port development in both Jefferson and Orange counties in Texas.[4]

Figure 3. The confluence of the Sabine-Neches Canal and the Neches River with the Rainbow Bridge in the top left. Taken some time after 1936. Source: J. C. Watkins Photography, University of North Texas Libraries, The Portal to Texas History, crediting the Port Arthur Library, accessed December 23, 2021, https://texashistory.unt.edu/ark:/67531/metapth79112/.

Feeding into the principal waterways are a myriad of tributaries, both streams and bayous, that historically ran snake-like through the county. One of the principal tributaries emptying into Sabine Lake is Taylor Bayou, which begins at a fresh-water marsh in the western part of the county and flows east

into the lake. Despite its freshwater source, the bayou has tide water that flows upstream to a point near the center of the county. Tributaries of Taylor Bayou include North Fork and South Fork. Hillebrandt Bayou also drains into Sabine Lake, rising northwest of Beaumont and flowing through the city before converging with Taylor Bayou (Figure 8). The northern course of Hillebrandt Bayou is less wild, having been dredged and channeled to improve drainage in Beaumont.[5] Pine Island Bayou is another primary bayou. Forming the northern border of the county, the bayou flows east through flat to rolling terrain before entering the Neches River approximately six miles north of Beaumont.[6] Hardwood trees and conifers line the bayou's banks. Pine Island Bayou flows through the region dubbed the Big Thicket, a historically heavily forested section of southeast Texas. In 1974, the National Park Service established the Big Thicket National Preserve, protecting discontiguous areas in Jefferson, Liberty, Hardin, Polk, Tyler, Jasper, and Orange counties that largely follow the bayous and streams. In Jefferson County, Pine Island Bayou and a small area in Beaumont fall within the preserve (Figures 4-5). Over the years, many of Jefferson County's waterways have been dredged and/or channelized. In addition to improving drainage, farmers used the waterways for irrigation, channelizing them and building pump stations along their banks.

A series of small marsh lakes are found in the southern half of the county, near the Gulf of Mexico. Among the lakes connected via the Salt Bayou include Little Lake, Clam Lake, Keith Lake, and Salt Lake. The Gulf Intracoastal Waterway, the manmade channel completed through Jefferson County in the 1930s, separated these marsh lakes from the mainland and cut off the fresh water supply to the marshes, allowing saltwater to invade. To provide fresh water to the lakes, rice crops, and cattle to the north, some property owners built levees, dams, and pumping stations south of the channel. Further inland, small, river-like lakes include Lovell Lake and Boyt Lake. At Lovell Lake, rice farmers built pumping stations and embankments for irrigation.[7]

The vast canal system in the county is also used for transporting municipal water. Pumped through the canals, water from the Neches River and two reservoirs north of the county (Lake B. A. Steinhagen and Sam Rayburn Reservoir) provide raw water to municipalities, industrial businesses, and farms.

## Soils and Vegetation

The county can roughly be broken into three distinct geographical zones: the marshy southern section, the middle coastal prairie, and the northern timbered section. Different soils are found throughout each section, though a heavy clay—Beaumont Clay—underlies the entire county (Figure 6).

The marshy lands in the south are covered in salt and wire grasses and dotted with salty marshes rimmed by cheniers (beach terraces). The soil is largely alluvium clay, except along the beaches, where sandy loam and fine sand are found. The area is covered in salt-tolerant vegetation and is hospitable to a variety of wildlife and waterfowl. In the 1970s and 1980s, much of this land was purchased by the state and federal governments and turned into protected park and refuge land (Figure 7).

Jefferson County has an abundance of underground natural resources. Among them include fresh water, natural gas, oil, sulfur, and ceramic clays.[8] The middle and largest section of the county is open prairie with patches of trees. The soil is dark and sandy loam over heavy clay and is generally difficult to till and naturally poorly draining. This area, due to the nature of the soil and the abundant prairie grasses, is best adapted for livestock and flood-tolerant crops like rice.

The northern section, particularly the northwest corner and along Pine Island Bayou, has sandy soils and is the most heavily timbered of the sections. Patches of dense trees and brush are also found west of Fannett in an area known as the Gilbert Woods and south of Beaumont along Hillebrandt Bayou (Figure 8). Pine trees dominate, though water oak, live oak, post oak, cypress, and palmetto are among the other tree species found in the county.

## Climate

Jefferson County has a subtropical climate with hot summers and mild winters. Average high temperatures range from the low 90s in July and August and the low 60s in December, January, and February. Average low temperatures fall to the low 70s in summer and mid-40s in winter.[9] Moisture from the Gulf of Mexico contributes to high humidity in summer, while the Gulf's warm waters keep winters mild. The county receives, on average, 59 inches of precipitation. Though rain generally falls evenly throughout the year, the month of May is the wettest and April the driest.[10]

Due to its location on the Gulf of Mexico, Jefferson County is susceptible to hurricanes during hurricane season – roughly July through November. More than 10 hurricanes and tropical storms have hit Jefferson County since the mid-nineteenth century. Among the most devastating hurricanes to strike the county include Hurricane Audrey (1957), Hurricane Carla (1961), Hurricane Bonnie (1986), Hurricane Rita (2005), Hurricane Ike (2008), and Hurricane Harvey (2017), each causing significant property damage.

# PRE-1861: EXPLORATION AND EARLY SETTLEMENT

## PREHISTORIC INHABITANTS

Inhabitation of present-day Jefferson County dates back to the Paleo Indians, who traversed and occupied the area over 13,000 years ago.[1] Spearheads and ceramics are among the artifacts found belonging to these inhabitants, who hunted giant sloth, mammoth, and saber-toothed tigers that lived in the coastal plains, as evidenced by fossilized teeth and bones found at McFaddin Beach in Port Arthur.[2] Archaeologists have also discovered artifacts dating to the Archaic Period (c. 10,000 – 2,000 years ago). Ceramics, human and animal bones, shells, and spears are among the artifacts found at Black Hill Mound south of Beaumont.[3] Originally believed to be a natural mound, more recent studies suggest the area was used for ceremonial purposes by Native inhabitants.[4] Around 2,000 years ago, the Atakapa tribe inhabited the area. Ethnohistoric records indicate the tribe had two villages near present-day Beaumont on the Neches River and one at Sabine Pass.[5] Archaeologists have also found shell middens (piles of shells) and pottery shards believed to be left by the Atakapa.[6] The Atakapa occupied the area as late as the early nineteenth century, during which time they traded with the Europeans in the area. Diseases brought by Europeans greatly diminished the Atakapa and, by 1908, only nine descendants were known to occupy the area.[7]

## EUROPEAN COLONIAL EXPLORATION AND TRADE (1528–1821)

For a portion of the three centuries spanning the mid-sixteenth to mid-nineteenth centuries, the Spanish and French vied for control over a larger region that encompassed present-day Southeast Texas. Throughout the period, the two disputed ownership over the region, and while they both maintained a level of presence, neither succeeded in colonizing nor settling the area.

The Spanish first laid claim to the region after Álvar Núñez Cabeza de Vaca led an expedition along the Gulf Coast in 1528. Sent by the King of Spain to colonize the area between Florida and the Rio Grande River, de Vaca and several Spaniards spent around six years trading and living among the region's Native Americas (presumably the Atakapa tribe) before departing for Mexico. During this period, disease took a number of de Vaca's men as well as Native Americans.[8] Throughout the sixteenth century, the Spanish monarchy further strengthened its claim to this region of the New World, authorizing subsequent expeditions, including ones led by Hernando de Soto and Luis de Moscoso Alvardo.[9]

For over a century, Spain mostly ignored its claim to this territory, known as the El Atascosita District—an area encompassing present-day Chambers, Hardin, Jasper, Jefferson, Liberty, Newton, Orange, Polk, San Jacinto, and Tyler counties—focusing instead on its more mineral-rich territories. Spanish interest in the region grew, however, when the French arrived in the territory in the late seventeenth century. Sent with over 100 colonists, French explorer Sieur de La Salle landed at Matagorda Bay in present-day Victoria County in 1685. La Salle's settlement, Fort St. Louis, lasted approximately two years before the remaining colonists deserted and killed La Salle. Despite the settlement's failure, La Salle and the French successfully established trade with some of the region's tribes, igniting further tensions with the Spanish. In return, Spain established San Francisco de los Tejas Mission on the upper Neches River in present-day Houston County in 1690.[10]

Throughout the eighteenth century, the French and Spanish sent more men to Southeast Texas to strengthen trade with Native Americans and take control of the area. While much of the Spanish and French interests focused further inland, the Spanish maintained a post just west of present-day Jefferson County, and the French continued trading with tribes in the region. At least one Frenchman, with enslaved men, operated "rancherias" on the east side of the Sabine River in the mid-eighteenth century.[11] As the French continued expanding their reach in the region, in 1756 Spain established two

missions, Nuestra Senora de la Luz and San Agustin de Ahumada Presidio, in neighboring present-day Chambers County (Figure 9). Disease, a hurricane, lack of food and supplies, and a general failure to convert Native tribes plagued both missions, which were essentially abandoned following France's cession of its Louisiana territory to Spain in 1763.[12]

Figure 9. Map showing the original boundaries of Jefferson County after its organization in 1838. At the time, it included all of present-day Orange County (independently organized in 1852), most of present-day Hardin County (independently organized in 1858), and part of Chambers County (independently organized in 1858). Source: HHM.

Despite Spain's control of the region in the late eighteenth century, the French continued their trade, and by the 1770s, the English even manned a ship on Sabine Lake, where they traded goods with the Atakapa.[13] During this period the region became a haven for smuggling. Beginning in the 1810s, pirates, including the notorious Frenchman Jean Lafitte, preyed on ships in the Gulf of Mexico and used the region's waterways, including Sabine Lake and the Neches and Sabine rivers, to move enslaved people and contraband between Point Bolivar on Galveston Bay into Louisiana. After Lafitte died in 1821, these activities reportedly experienced a lull until 1836, when social upheaval in the wake of the Texas Revolution and Texas's independence from Mexico renewed the need for smuggling enslaved peoples; though slavery was legal in the Republic of Texas, the importation of enslaved people from Mexico was illegal. By this time, the majority of smugglers were Americans, though the usage of the waterways remained the same, with Sabine Pass and Brig Landing serving as popular docking sites for ships.[14]

### Spanish Cattle Grazing and Drives

In 1821, the Treaty of Cordova transferred ownership of the region from Spain to Mexico, beginning the era of permanent Anglo settlement in the region. Despite Spain and France's failure at colonizing Southeast Texas, this period of European exploration significantly impacted the future of Jefferson County. In the early 1700s, wild horses and cattle grazed the land, thanks to earlier Spanish expeditions. Throughout the eighteenth century, the number of cattle grew, as the Spanish drove cattle from Mexico into the region for their missions. In addition to cattle, the Spanish also raised sheep, goats, horses, and chickens at their missions in present-day Texas.[15] As the number of cattle in present-day Texas multiplied, the Spanish began driving cattle into their Louisiana territory in the 1770s. Driving cattle from the region, the Spanish used old mission trails, including the Atascosita Trail, which traveled from the Brazos River to the southwest through Southeast Texas and onto the Opelousas Road (later named the Beef Trail) and then into Louisiana (see Transportation discussion).[16] Though the Spanish cattle drives were short-lived, continuing only into the 1780s, the cattle-raising traditions established at the missions and subsequent drives laid the foundation for the forthcoming development of Jefferson County's stock-raising industry and renewed cattle drives.

## EARLY NON-NATIVE AMERICAN SETTLEMENT AND LAND-USE PATTERNS (1821–1860)

Early non-Native American settlement in Jefferson County can be broken into three different periods of rule: Mexican rule, Texas rule, and American statehood. Land grants offered by all three countries encouraged settlement and resulted in the emergence of early industries and agriculture. The formation of county government, communities, and expanded transportation also attracted residents. Despite this early growth, by 1860, Jefferson County remained sparsely populated, with just shy of 2,000 residents.

### Settlement Under Mexican Rule (1821–1835)

Permanent settlement in the region began in earnest under Mexican control in the mid-nineteenth century. To encourage settlement, the Republic of Mexico offered individual homestead land grants for approximately 4,428 acres (a league), as well as larger "empresario" grants to entities colonizing at least 200 families, who in turn received between 177 acres (a labor) and 4,605 acres (a league and a labor), depending on the usage of the land.[17] Despite the empresario grant system, for the first decade under Mexican rule, the region, far removed from any major city, was largely self-governed and settled haphazardly, with little government oversight or legal worries on behalf of the settlers.[18] During this period, settlers "squatted" on land along the Neches and Sabine rivers, raising livestock and subsistence farming. In 1826, settlers in the Municipality of Atascosita (roughly the same as the Spanish-controlled El Atascosita District) voted to merge with Stephen F. Austin's nearby San Felipe Colony. Though the merger never occurred, the vote revealed that Anglo Americans made up the majority of residents in the district: 331 "free" [White] citizens and 26 enslaved people.[19] Among the early settlers in present-

day Jefferson County were Noah and Nancy Tevis and their five children. The family settled at Tevis Bluff on the Neches River (present-day Beaumont) in 1824.

Settlement increased slightly after 1829 when Lorenzo de Zavala was awarded an empresario grant for the settlement of 500 families (Figure 10). Lorenzo de Zavala, along with empresarios of neighboring grants, Joseph Vehlein and David G. Burnet, transferred interests in their grants to the Galveston Bay and Texas Land Company, assigning them with colonizing the land.[20] The Galveston Bay and Texas Land Company, a real estate promotion firm founded in New York, helped settlers obtain land titles within the three grants upon completing Mexican colonization law requirements.[21] Between 1830 and the Texas Revolution (1835-1836), settlers—a mix of merchants, farmers, and other entrepreneurs—continued trickling into the region. Settlers came from all over, including the Midwest and South. Many migrated from Louisiana, St. Landry Parish in particular, and the period saw small numbers of Cajuns, or Acadians, begin entering Texas.[22] Despite the abolition of slavery in Mexican territories in the late 1820s, the law was largely ineffective at preventing settlers from migrating with enslaved peoples. The ban also indirectly encouraged the smuggling of enslaved peoples along the coast and in Jefferson County.[23] Though the majority of African Americans arriving in this period were enslaved, at least four free Black men—the Ashworth brothers—arrived between 1831 and 1835 (see sidebar for more information).

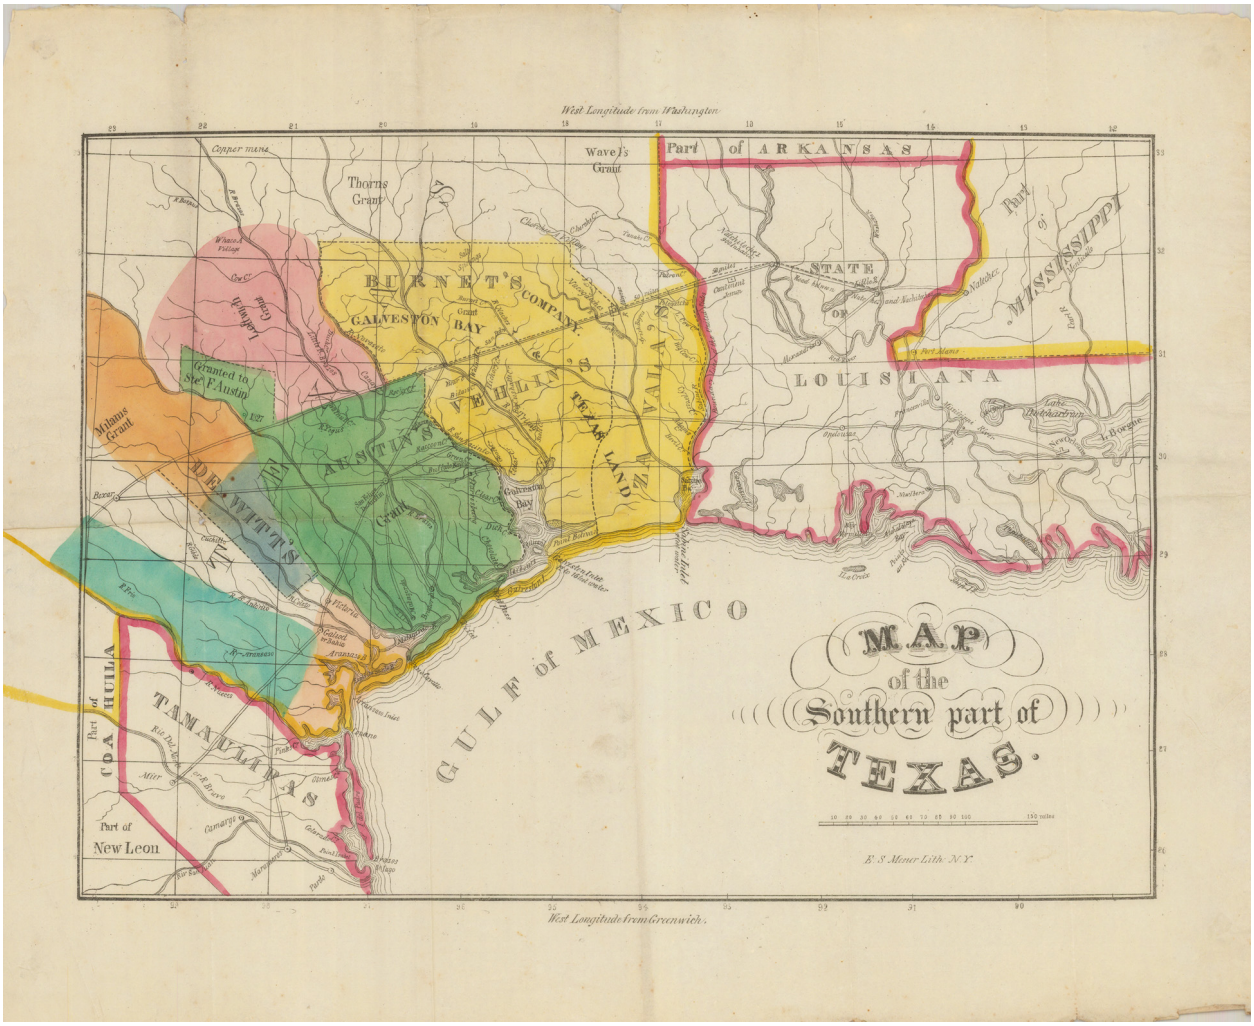

Figure 10. Map showing the land acquired by the Galveston Bay and Texas Land Company around 1830, including the Lorenzo de Zavala empresario grant that encompasses present-day Jefferson County. Source: Barry Lawrence Ruderman, Antique Maps Inc., accessed December 12, 2021, https://www.raremaps.com/gallery/detail/50971/map-of-the-southern-part-of-texas-mesier.

**Ashworths in Jefferson and Orange Counties**

Between 1831 and 1835, the biracial Ashworth brothers—William, Aaron, Abner, and Moses—arrived in present-day Jefferson County from South Carolina via Louisiana.[24] Three of them had obtained land grants from the Mexican government, though before claiming their land, war broke out. Despite opposition to the immigration of free Black people into present-day Jefferson County, William acquired a franchise from the county in 1838 to operate a ferry across Sabine Like and up the Neches River to Beaumont.[25] In 1840, the Texas Congress ordered all free Black people to leave Texas or be sold into slavery. White residents, including some prominent officials in Jefferson County, petitioned Congress for an exemption for the Ashworths, leading to the passage of the Ashworth Act later in 1840.[26] The bill exempted the Ashworths and other free Black residents who had been in Texas prior to the signing of the Texas Declaration of Independence from leaving the Republic.[27] The 1850 census lists 63 free Black residents (presumably all biracial) in Jefferson County (presumably within present-day Orange County), 38 with the name Ashworth.[28] Both Aaron and William Ashworth are listed as farmers and property owners, as well as owners of enslaved people.

Settlers generally claimed land along the waterways for the fertile soil and abundant timber, and they used trails, rivers, and bayous for transportation.[29] Taylor Bayou was popular among settlers, and small population nodes also developed at Santa Anna on the Neches River (present-day Beaumont) and Grigsby's Bluff (present-day Port Neches). By 1834, more settlers had arrived at Tevis Bluff, including two brothers from Michigan, Henry and Dr. D. J. Otho Millard, who opened a store in the small community.[30] A year later, John Jay French, a merchant from New York, also opened a store in the settlement. Also in 1835, Henry Millard, along with partners Joseph Pulsifer and Thomas B. Huling, purchased land from Nancy Tevis in Tevis Bluff and in nearby Santa Anna. They laid out a townsite—the first in present-day Jefferson County—and named it Beaumont.[31]

## The Republic of Texas Settlement (1836–1845)

**Jefferson County and Texas War for Independence (October 1835 – April 1836)**

Though no battles occurred in the county during the War for Independence, Jefferson County played a role in the formation of the Republic of Texas. Residents generally favored independence from Mexico leading up to and during the war, and residents supported the cause militarily and politically. At least one military company under Captain B. J. Harper formed in Beaumont. The company, made up of around 28 men, was called to the Alamo for relief but arrived after its fall. Though they missed the fight, several other men from Beaumont were among the "old 300" who helped take San Antonio from the Mexicans.[32] Politically, several residents of Jefferson County served as representatives at the Convention of 1836 that established the Republic of Texas, and several men served on the General Council, the provisional governing body of the Republic of Texas in early 1836.[33] Lastly, residents and property were not left unscathed during the war. After Antonio Lopez de Santa Anna and Mexico took the Alamo and Texas troops led by Sam Houston retreated toward the Sabine River, residents between the Rio Grande and the Brazos River fled east toward Galveston and Louisiana in what is known as the "Runaway Scrape."[34] In Jefferson County, some refugees reportedly stole from residents, while some likely fled into Louisiana via Sabine Lake and the Neches River.[35]

At the end of the War for Independence, the area that would encompass Jefferson County had approximately 250 free residents.[36] By 1845, the population topped 1,000. The Republic's continued land grant policy, as well as the organization of the county, contributed to growth during the decade.

In December 1837, the Republic of Texas's First Congress established the county system, and Jefferson County was among the first counties organized. At the time of organization, Jefferson County encompassed an area larger than its present-day boundaries and included all of present-day Orange County (independently organized in 1852), most of present-day Hardin County (independently organized in 1858), and part of Chambers County (independently organized in 1858) (see Figure 9). In 1838, Beaumont was named county seat.[37] That same year, the county erected its first building (not extant) – a jail and offices in Beaumont (the first courthouse was not built until 1854).

### LAND GRANTS AND SETTLEMENT PATTERNS

Similar to the Mexican system, the Republic of Texas offered land grants to promote settlement. It initially offered "headright grants" worth 1,476.1 acres for existing settlers, though the size of grants decreased gradually between 1837 and 1842, ranging from 320 to 1,240 acres. The Republic of Texas also gave land grants to veterans of the Texas War for Independence.[38] One veteran, Charles Cronea of Sabine Pass, was awarded 1,280 acres for his service.[39] Whereas merchants and traders made up a good portion of the earlier settlers, this period saw more homesteaders and ranchers arrive. The makeup of

arrivals generally mirrored that from the previous period, with most migrating from the lower South, including some Cajuns and French Acadians. Enslaved peoples also arrived in Texas legally, as the constitution of the Republic of Texas permitted slavery.

Settlers claimed land grants primarily along the county's waterways in the northern and eastern sections of the county, along Pine Island Bayou, the Neches River, Taylor and Hillebrandt Bayous, and Sabine Lake (Figure 11). Beaumont, as county seat and a commercial center, experienced modest growth. John Jay French, who had arrived earlier in the 1830s, purchased 300 acres just north of Beaumont and, in 1845, built one of the oldest extant buildings in the county, a two-story wood building that functioned as both a house and a trading post (present-day 3025 French Road, within the Beaumont city limits, Figure 12).[40] Grisby's Bluff (present-day Port Neches) also saw modest development after its original settler, Joseph Grigsby, acquired over 3,000 acres in the area in 1837. Grigsby, a Kentucky native, acquired the land from Thomas F. McKinney, a keelboat operator who had surveyed the land earlier for a townsite. Upon acquiring the land, Grigsby built a plantation and a boat landing for early port activities (not extant, see Figure 11 for location of Grigsby's property).

Outside of Beaumont and Grigsby's Bluff, other small nodes of settlements developed along Sabine Lake, as land speculators acquired property during this period for the purpose of townsite building. Despite some modest growth, for the most part, town planning failed during this period. Among the failed townsites are Aurora and Sparks (located in present-day Port Arthur, both abandoned before Port Arthur developed in 1895), and City of the Pass (located on the mouth of the Sabine River in the general location of Sabine Pass Battleground State Park). Developed By Dr. Stephen H. Everett, John Bevil, and Bevil's son John R. of Jasper County and laid out in April 1839, City of the Pass proved unsuccessful with few of the 2,500 lots sold. One of the developers built a two-story house at the townsite (not extant), but the town failed to materialize.[41] Sabine City (present-day Sabine Pass and part of present-day Port Arthur) on the other hand experienced more success. Founded by Sam Houston's Sabine City Company in 1839, Sabine City was meant to rival Galveston as a major port.[42] At least 2,060 platted lots sold for residential and commercial purposes, and by 1844, the town had around 10 "wooden shacks" and around 150 residents - a third of them sailors, a third of them businessmen, and a third of them stockmen and farmers (see the Port Development discussion).[43] The town name first changed to Augusta upon an 1856 citizen petition to incorporate and again changed in 1860 to Sabine Pass. Outside of eastern Jefferson County, no significant nodes of settlement occurred. Some landowners, however, did establish post offices, which operated on and off over the period in various locations. One such location was Pine Island. In 1839, landowner Thomas D. Yocum secured a post office at Pine Island, approximately two miles north of present-day Pine Island in what is called Westbury. The post office closed shortly after 1839 and reopened again for several decades in 1849.[44]

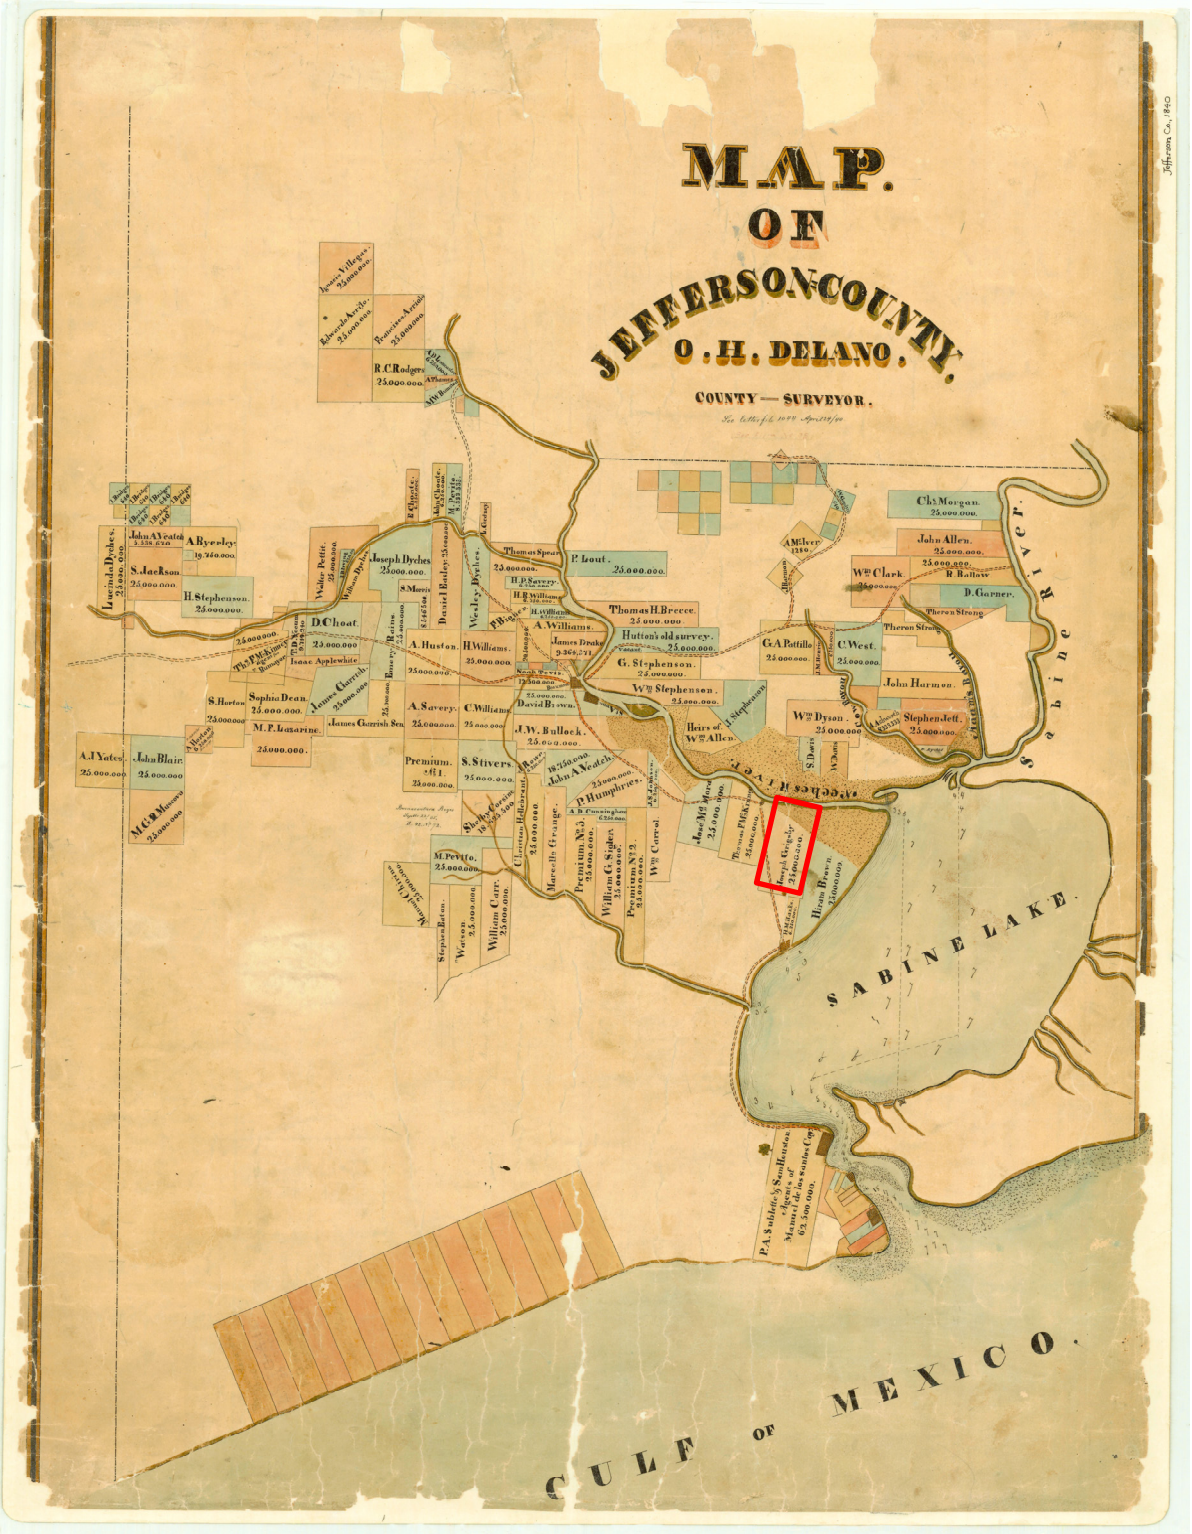

Figure 11. Map of Jefferson County in 1840. Note that much of the land outside of eastern Jefferson County and away from the waterways remained unclaimed. Also note the early development of a road network running through Beaumont. Also, Grigsby's property, where a plantation and mill were located in present-day Port Neches, is roughly outlined in red. ## Early Texas Statehood Settlement (1845–1860)

In December 1845, the United States annexed the Republic of Texas. The annexation occurred during a period when Americans embraced the doctrine of Manifest Destiny. Guided by the belief that American expansion was a duty, the government purchased lands, engaged in wars over territorial expansion, granted free land, and allowed slavery in some territories. Though the United States went to war with Mexico over parts of Texas, Jefferson County, in the far eastern part of the new state, was outside the disputed area and encountered no fighting on its soil during the Mexican-American War between 1846 and 1848. Entering statehood, Texas was by and large still sparsely populated, with around 150,000 residents in 1850.[45] To encourage settlement, the state continued the land grant policy after annexation, offering up to 320 acres to homesteaders between 1845 and 1853, and up to 160 acres between 1854 and 1898.[46] Slavery remained legal in Texas, and the state's enslaved population grew more than 300 percent between 1850 and 1860.[47] State leaders also encouraged immigration from Europe to help populate Texas, even creating a Department of Immigration in 1871 to promote the state and its agricultural and economic strengths.[48] Public land—around 20 percent of the state—was also granted to private entities charged with public infrastructure improvements including building railroads, irrigation canals, highways, and schools.[49] By 1860, these policies helped grow Texas's population by nearly 42 percent over the ten years since 1850 and drastically impacted development of land across the state.[50]

In Jefferson County, these policies resulted in modest population growth between 1850 and 1860 (Table 1).[1] The majority of residents in antebellum Jefferson County were White and native born, born in the American South, particularly Louisiana and Texas.[51] Cajuns from Louisiana continued settling in Jefferson County and Southeast Texas, and "most of the thousand or so ethnic French in Texas by 1850 lived in the far southeastern counties [Galveston, Harris, Jefferson, and Liberty] and bore typically Cajun surnames" (as discussed in the sidebar on the French Cajuns).[52] The foreign-born population grew from around 3 percent to around 10 percent over the decade, with Europeans from Germany, England, and Ireland accounting for the bulk of this sector of the population.[53] Enslaved African Americans accounted for around 15 percent of the county's population throughout the decade (see the sidebar on the Enslaved Peoples of Jefferson County).

*Table 1. U. S. Census statistics for Jefferson County showing population growth and demographic breakdowns between 1850 and 1860. Note that census statistics are subject to error, and census methodologies for recording race and ethnicity were inconsistent from decade to decade.*

| Year | Total | Growth Rate | White | | Black | | | | | | Foreign Born | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|

**French Cajuns in Jefferson County**

The French Cajuns from Louisiana began moving into the region in the 1830s and 1840s, and an ebb and flow of migration continued throughout the nineteenth and into the twentieth centuries. Throughout the late nineteenth century, Cajuns left Louisiana, where economic conditions suffered after the Civil War, and moved to Southeast Texas and Jefferson County to work on the railroad and in the rice fields. Among the first Cajun settlers in Jefferson County was the Hebert family who settled and farmed on Taylor Bayou in 1842. By the late nineteenth century, a Cajun middle class emerged in Jefferson County, and Cajuns played important roles in the county's economic development. One Cajun migrant, Joseph Broussard, established the Beaumont Rice Mills in 1892 and also helped organize the Beaumont Irrigation Company. The early twentieth century, however, saw the largest migration of Cajuns into Jefferson County after the discovery of oil at Spindletop in 1901. Throughout the twentieth century, during periods of increased labor demand—in rice fields, the industrial expansion during World War II, and shrimping in the postwar period—Cajuns came to Southeast Texas to meet the demands. By this time, so many Cajuns had migrated to southeast Texas that the region was dubbed "Cajun Lapland."

The integration of Cajuns into Jefferson County impacted the culture in a variety of ways: the food, music, and architecture. A former example of the Cajun influence on the architecture of Jefferson County was the Dugat-Hamshire House in Fannett. Built by Alcad Dugat in phases between 1876 and 1888, the house incorporates Acadian plantation architecture with Victorian-era architectural details (Figure 13). Dugat migrated with his parents from Louisiana around 1854. On the land he acquired from his parents, he raised sheep, farmed, and made furniture. This house was demolished around 2010.

[1] The exact population growth in Jefferson County between 1850 and 1860 is hard to determine due to differences in county size between the two years. In 1850, Jefferson County was a much larger county that included present-day Orange County, Hardin County, and Chambers County, but by 1860 they had formed their own counties, leaving Jefferson County with its present-day boundaries.

Figure 13. The Dugat-Hamshire House in Fannett was built between 1876 and 1888. Representative of early settlement outside of Beaumont and the Cajun heritage of early settlers, the house was a Jefferson County landmark. The house was demolished around 2010. **The Enslaved Peoples of Jefferson County**

In 1860, 311 African Americans lived in Jefferson County (Figures 14-15). Some had moved with their enslavers to Jefferson County, while others had been born into slavery to African Americans brought into the county in an earlier period. Many White Jefferson County residents owned enslaved people, and some only owned one. The largest number of enslaved peoples belonged to two men: John Stamps, a railroad contractor, had 26, and David Wingate, a steam mill operator, had 13.[54] One of the enslaved men was Henry Lewis. Born in 1835 at Pine Island (approximate location of the Thomas D. Yocum grant and present-day Westbury, north of US 90), Lewis participated in the Federal Writers' Project "Born in Slavery: Slave Narratives" in the 1930s, where he recalled his time in Jefferson County. His enslaver was Robert Cade, who Allen recalls as an Irishman who owned a plantation in Louisiana, where Allen's father was born.[55] In Pine Island, Allen recalled working in the woods and the fields with "100 slaves" and building Cade's house out of hand-sawed planks.[56] Allen shared a log cabin with a dirt floor, a mud-cat chimney (a chimney constructed from sticks and mud rather than bricks or stone), and mattresses made out of sacks. Allen remembered the slave traders who traveled through the county with a group of enslaved peoples who were forced up onto blocks to be sold. After Juneteenth 1865, Allen moved to neighboring Chambers County before returning to Beaumont, where he died at the age of 107 in 1943.[57] Allen was buried at Blanchette Cemetery, a historically all-Black cemetery in Beaumont.

Earlier established settlement patterns continued leading up to the Civil War. Much of the southern half of the county remained unclaimed, while the Texas and New Orleans Railroad and the state owned a majority of parcels in western Jefferson County. The construction of the Texas and New Orleans Railroad laid the foundation for future townsite development of several new communities, including China and Nome, though development of these communities would not occur until after the Civil War (see the Transportation section below for discussion of the railroad).

The middle, western, and northern sections of the county remained rural and sparsely populated. Their settlers, mostly ranchers and subsistence farmers, spread out on large parcels on the most fertile lands on and near the county's waterways (Figure 16). Among the early settlers who made this part of the county home in this period was the Broussard family. Migrating from Louisiana in the 1840s, the family built several (extant) houses—Hamshire House (10954 East Hamshire Road), Arceneaux House (end of Wilber Road, State Highway 73), and Boudreaux House (originally on Broussard Cemetery Road but moved to 10714 East Clubb Road in Fannett in 2010)—near Taylor Bayou in the late 1850s (Figure 17).[58] In addition to these houses, several small cemeteries across the county remain as some of the only resources associated with these early families and settlers.

Meanwhile, in eastern Jefferson County, the towns of Beaumont, Grigsby's Bluff, and Sabine Pass emerged as the leading commercial and industrial centers, home to the county's mills, ports, gins, hotels, stores, and post office. Beaumont and Sabine Pass also had their own newspapers. As such, these communities attracted the most settlers, including merchants, engineers, doctors, and lawyers. Beaumont also benefited from its role as county seat, boasting a courthouse in addition to the county jail and offices (Figure 18). Beaumont emerged as the social and cultural center of the county. Because residents had limited time outside of work and the county's crude transportation network restricted the development of a robust cultural and social scene, entertainment options were limited. Entertainment was generally confined to private celebrations and the occasional ball and dance. Excursion cruises were also offered on Lake Sabine.[59] Despite the limited spaces for entertainment, by the end of the period, Beaumont had a dance school and a dance instructor, who placed advertisements in the *Beaumont Banner* as a "teacher of fashionable dances."[60]

During this period, religious congregations, including Methodist, Catholic, and Baptist congregations, formed in Jefferson County. Prior to building churches, traveling missionaries, pastors, and ministers served these congregations. Sent from cities including Galveston and Nacogdoches, preachers traveled to Jefferson County as part of the "Alligator Circuit," which included Southeast Texas and neighboring parts of Louisiana. Services occurred in private homes, stores, and other buildings, and often were attended by followers of various sects. Though several attempts were made at building a church in Beaumont during the period, the only known building "devoted solely to religious services" was a Methodist church in Sabine Pass.[61]

Similarly, the county's education system was in its nascency. Early on and throughout the period, private instruction occurred across the county, in houses and even in several schoolhouses (in Sabine Pass and Green's Bluff in present-day Orange County, not extant).[62] Not long after the formation of Jefferson County, in 1854, the county court established school districts with appointed trustees.[63] By 1860, nearly 230 children in the county attended publicly funded schools in Beaumont and Sabine Pass, where school buildings had been built (none extant from this era).[64]

## EARLY INDUSTRY

Very little industry emerged during this period in Jefferson County, and what did develop centered around timber. The county's abundance of timber and its location on major waterways downstream from timber-rich counties contributed to the development of a robust logging and milling industry. The industry first emerged in the late 1830s, when Jefferson County exported its first shipment of handmade cypress shingles.[65] Using cypress from trees located along the Neches River and pine from the Gilbert Woods near Fannett and along Pine Island Bayou, settlers and shingle makers in Jefferson County contributed to the more than six million shingles shipped through Sabine Pass in 1850.[66] A large number of the shingles, though, were likely made at county sawmills from timber floated down the Neches River. The practice of floating timber downstream into Jefferson County began in the 1840s when hand-

powered shingle and sash mills opened along the Neches River. The county's first steam-powered sawmill opened in 1846 in Sabine Pass, and by 1860 several others operated in Grigsby's Bluff (not extant) and Beaumont. In addition to shingles, Jefferson County's mills also produced milled lumber, fence pickets, lathes, spokes, and staves.[67] Early shipbuilding was also closely associated with the county's sawmills, with shipyards opening in Beaumont and Sabine Pass on the water prior to the Civil War. At the shipyards, shipbuilders earned some of the highest wages in the county building and repairing steamships for merchants.[68]

## EARLY AGRICULTURE

Around half the heads of households in Jefferson County reported themselves as a farmer or rancher in the 1850 and 1860 censuses. Many residents participated in some form of agriculture during this period, often combining subsistence farming with other occupations. Outside of subsistence farming, early agriculture in Jefferson County was primarily dominated by cattle ranchers who also grew crops.

### Farming

Prior to the mechanization of farming, farmers in this period relied on human and animal labor to plant and harvest crops. Factored with the lack of irrigation, readily available information on new planting techniques and seeds, and reliable transportation, crops in this period were still largely grown on small plots and consumed at home and locally.[69] Among the crops grown in the county include corn, sweet potatoes, hay, sugar cane, rice, and cotton.

Crops, including corn, hay, and sweet potatoes, were typically grown by ranchers for cattle feed. During his travels through Southeast Texas in the 1850s, Frederick Law Olmstead recorded the "herdmen cultivating no other crop than corn, and of that, not enough to supply their own bread demand."[70] Sweet potatoes were also "characteristically wormy and inedible, suitable only as animal feed."[71] Sugar cane, while one of the crops with the largest harvests in weight in 1850, was, according to historian W. T. Block, only grown in significant amounts by one farmer, Stephen L. Smith.[72] On his 325-acre farm in present-day Port Arthur, Smith had livestock and grew corn, sweet potatoes, potatoes, and peas in addition to producing 25,000 pounds of sugar and  cane sugar in 1849.[73] After Smith's murder in 1852, the county had no grower of any significant amounts of sugar, as is reflected in the zero pounds of cane sugar reported in the 1860 agricultural census. Prior to its emergence as a commercially viable crop in the late nineteenth century, rice was grown in fluctuating numbers prior to the Civil War. Producing 18,900 pounds of rice in 1850, the second most in the state in 1850, the census reported 0 pounds for Jefferson County in 1860.[74] The decline in rice, perhaps a recording error, may also be attributed to higher cotton prices or crop failure. Rice from this period, dubbed "Providence Rice," depended on good weather and rain for its survival.[75]

Lastly, some cotton was grown in Jefferson County during this period, but unlike much of the Lower South, the county's agricultural economy was not based on cotton.[76] While some cotton was grown, the county was comparatively poor in cotton production, only producing 2 bales of ginned cotton in 1850 and 84 bales in 1860 (by comparison Harrison County produced 4,581 bales in 1850).[77] Though Jefferson County did not have a large cotton and plantation-based agricultural system, Joseph Grigsby maintained a large cotton plantation on the Neches River in present-day Port Neches. One of the earliest settlers, Grigsby came from Virginia, via Kentucky, where he had owned a 1,000-acre cotton plantation.[78] In Jefferson County, Grigsby, who built and operated his plantation with enslaved labor, opened the first horse-driven cotton gin in the area (see Figure 11 for location of Grigsby's property).[79]

### Cattle

When settlers arrived in Jefferson County, some wild cattle from the Spanish remained. Settlers also migrated with their own herds of cattle from Louisiana and elsewhere, letting them roam freely on the

range. Without fencing, herds of cattle could double in three years, even with the threat of predatory animals and theft.[80] As such, over the period of early settlement, the number of cattle in the county grew, reaching a high of 55,639 head in 1859, among the top counties in Texas.[81] Some individual ranchers in particular contributed to the growth of the cattle industry in the county. In 1839, 10 ranchers owned nearly 60 percent of the county's 6,846 cattle.[82] Danish immigrant Christian Hillebrandt, who settled near the bayou that now bears his name, owned 775 head of cattle on 21,000 acres, the most in the county.[83] By 1858, Hillebrandt, who migrated from Alabama with a herd of cattle, had landholdings stretching into Liberty and Orange counties and a herd of 9,000 cattle worth $60,000.[84] Other early ranchers, who settled along the county's interior waterways, included David Burrell, William and Aaron Ashworth, and James and William McFaddin, who founded what would become one of the county's largest ranches in the twentieth century, the McFaddin Ranch (see Figure 16 with property owners highlighted) (see Chapter 5: 1900-1940 for more information on the McFaddin Ranch).

Every year, ranchers rounded up their herds for transport to market in New Orleans. Throughout the period, the cattle drives followed the Opelousas Trail. In Beaumont, the herds swam across the Neches River at Collier's Ferry into Orange County. From there, the herds crossed the Sabine, Calcasieu, and Mississippi rivers down to New Orleans. In the early 1850s, around 40,000 cattle crossed the Neches River each year during the drive.[85] By the late 1840s, some ranchers adopted an alternative overseas route to New Orleans. While some ranchers drove their herds to Galveston or Indianola for shipping, Sabine Pass reported growing numbers of exported cattle in the 1850s: 4,531 in 1857 and 5,669 in 1859.[86] While resources associated with these cattle drives are no longer extant, Official Historic Texas Markers commemorate the ferry crossing at Collier's Ferry Park in Beaumont and the Opelousas Trail in China (Figure 19).

> ***Learn More!*** *Read about Collier's Ferry: https://co.jefferson.tx.us/Historical_Commission/pdfjs/web/viewer.html?file=files/markers/10502.pdf?Marker%20No.=10502*

During this period, cattle ranchers not only earned money selling cattle to market for meat, but they also made money off cattle hides and tallow. As a result, a robust leather industry, second only to lumber, developed in Jefferson County. Beaumont emerged as the center of the leather industry, with a slaughterhouse and several tanneries opening in the 1840s.[87] In the 1850s, a saddlery and shoe shops followed. By 1859, Jefferson County exported over 6,000 hides through Sabine Pass.[88]

Figure 19. Image of Collier's Ferry Park in Beaumont. Collier's Ferry was an important ferry crossing on the Neches River. Following historic Native American traces and trails used by early explorers and settlers, the crossing was part of the Opelousas Trail—the historic cattle drive trail—in the nineteenth century. # TRANSPORTATION

## Trails

Throughout this period, overland trails provided the primary means of transportation into and through Jefferson County. Native Americans, European explorers and traders, and early settlers all relied on these trails for travel in Southeast Texas. Forged first by the Native Americans, these trails later connected missions, trading and military posts, settlements, postal stops, and cattle markets. Developed over time, the series of trails established in this period became the foundation for the emerging road network that began at the end of this period.

In Jefferson County, a small network of dirt roads had developed by 1840 (Figure 11). Due to the marshes in the south, the primary routes to and through the county were further inland where the landscape was less of an impediment to travel. All roads intersected in the county's largest settlement, Beaumont. From Beaumont, roads ran north to Woodville in Tyler County and south to Grigsby's Bluff and Sabine Pass. The road running east-west was part of the larger road through Southeast Texas and Louisiana known as the Opelousas Trail, a route named for the Atakapan-speaking tribes who forged the trail between villages. County "reviewers of roads" oversaw the roads, but citizens were largely responsible for maintenance.[89] Due to the number of waterways in the county, ferries, and later bridges, became widely used. One of the primary ferries in the county crossed the Neches River in present-day Beaumont. Along the Opelousas Trail, Collier's Ferry operated between 1831 and 1950. The county also

oversaw the construction of some early bridges in this period, including ones over Cow Bayou, Adams Bayou, and Ashworth Bayou.[90]

## Port Development and Activity

Sabine Pass developed as the primary port in Jefferson County during this period. Dating back to the period of European exploration and trade, Sabine Lake served as a primary entrance to the interior and therefore became an important place of trade (see discussion on smuggling activities during the period of European settlement and occupation). Acknowledging the importance of the waterway, Mexico designated the mouth of the Sabine River at Sabine Lake a port in 1835. When the Republic of Texas obtained power from Mexico, they established a customs house on the lake in 1837, collecting duties and tonnage tax to help pay off their war debts and finance their new government (Figure 20).[91] In dispute over jurisdiction over the waterway, the U. S. government built a customs house on the opposite shore in Louisiana a year later. Tensions grew between the two governments, reaching a peak when U. S. merchant ships anchored off the Texas shoreline and sold goods onboard duty-free. The waterway was also increasingly used by people smuggling enslaved men into Texas and the United States. In response, President Sam Houston sent patrols to Sabine Lake and cannons to the Texas customs house, ordering warning shots be fired at vessels attempting to bypass the customs house.[92] Violence was ultimately averted once the United States annexed Texas and the customs house fell under the jurisdiction of the federal government. Several years later, in 1856, the Sabine Pass Lighthouse was erected by the U. S. government on the Louisiana shore of Sabine Lake (listed in the National Register of Historic Places).

Throughout the period, under Mexican, Texan, and American rule, the trade through Sabine Pass increased, despite the lack of improvements to the waterways and with minimal aid from any government. Beginning in the 1830s and continuing throughout the period, private individuals and companies operated the ships and wharves. They oversaw the arrival of manufactured goods and the departure of agricultural goods and products, livestock, and lumber. Imports arrived from New Orleans and New York, while exports typically went to New Orleans and Galveston. Steamboats came and left from Sabine Lake, while smaller keelboats and flatboats traversed the Neches River, as its fluctuating depth was too risky for larger ships. Despite lack of government aid, the early traders established a flourishing industry at Sabine Pass.

Cotton was among the first products shipped through Sabine Pass. Predominantly grown in cotton-producing counties upriver of Jefferson County, the number of bales shipped through the port between 1838 and 1859 grew from 84 to more than 18,000.[93] Other products grown out of county, including tobacco, were also shipped through the port. The increase in livestock and manufactured products from Jefferson County also contributed to the growing port economy. By the end of the period, Sabine Pass supported a robust shipping industry, exporting 5,669 cattle, 6,096 hides, 15 bales of deer skins, 12,000,000 shingles, 700 hoop poles, 97,000 barrel staves, and 1,099,000 board feet of lumber.[94] That same year, between 90,000 and 100,000 barrels of merchandise were imported through the port.[95]

## Early Railroad Efforts

Prior to the Civil War, several railroad companies began building in Jefferson County. Though the outbreak of war ultimately halted further development, these early efforts brought in more people to the county, boosted the economy with the shipment of materials to the county, and laid the foundations for future townsite development.

Though the government granted several charters to railroad companies in the early 1850s, only two completed tracks during the period. The first, the Eastern Texas Railroad, was completed with enslaved labor between Sabine Pass and Beaumont in 1859. High freight rates, the lack of integration into a larger rail network, and the removal of rails and crossties for construction during the war ultimately rendered

the railroad bankrupt in the early 1860s.[96] The second railroad, the Texas and New Orleans Railroad, completed 41 miles of track through northern Jefferson County from Beaumont to Liberty.[97] In 1861, the line was completed from Beaumont to Orange. The railroad built several water stops in Jefferson County, including sites that would later become China and Nome. Though the outbreak of war ended service for all but the Confederacy during the war, the Texas and New Orleans Railroad rebuilt and reestablished service in the late 1870s.

# THE LATE NINETEENTH CENTURY: 1861–1899

Over the relatively short period of time from the start of the Civil War to the turn of the twentieth century, Jefferson County underwent dramatic changes in population, agriculture, industry, and transportation. After the war, most economic, agricultural, and population gains were erased, and the county was largely left in disarray as it entered into a period of rebuilding. Over the next three decades, however, the county's population, industries, and agriculture rebounded, surpassing previous highs. Taking advantage of improved shipping and the frenzied post-war statewide railroad construction, Jefferson County built a prosperous economy around the region's natural resources: waterways, timber, and fertile soils.

## THE CIVIL WAR: 1861–1865

In 1860, Jefferson County's population was just shy of 2,000. Comprised mostly of subsistence farmers and ranchers, with a mixture of lumbermen, merchants, and tradesmen in the cities, the population was 84 percent White and 16 percent Black enslaved people. Though its economy was unlike the cotton plantation system—which was heavily reliant on enslaved labor—found through much of the South, anti-Republican sentiment, fueled by the election of Abraham Lincoln as President in 1860, permeated much of Texas, including Jefferson County. Following the secession of six states from the Union, the Texas legislature voted 166 to 7 in favor of leaving the Union in early 1861.[1] In a follow-up popular referendum, three-quarters of Texans voted in favor of joining the newly formed Confederacy. In Jefferson County, the vote was 256 for secession and 15 against.[2]

Immediately after seceding from the Union, men from Jefferson County joined and formed militia companies. In 1861, three companies, comprised of 29 to 55 men, formed in Jefferson County: Sabine Pass Guards, Jefferson County Mounted Rangers, and Ben McCullogh Coast Guards.[3] Members of these militias, as well as individuals, joined with the Texas Volunteers and other county militias, fighting in various battles in the South. By the end of the war, half of the families in Jefferson County had at least one Confederate soldier.[4] All sectors of the county's economy felt this loss in labor. On farms and ranches, work fell to the county's comparably small, enslaved population and remaining family members, many of them children. As a consequence, fields were left untended, and farms produced smaller crop yields. Similarly, the county's sawmills and gristmills manufactured and produced fewer products as a result of the shrinking population. The Union blockade compounded the loss of labor by cutting off imported dry goods, hardware, and foodstuffs. As a result, some residents resorted to making their own soap, carved utensils, and coffee from ground corn.[5] Some farmers in Sabine Pass even grew indigo and made their own ink. Though families with soldiers received weekly food rations, the focus of many families during the war was simply survival. The blockade also meant that cattle and many of the products made in the county, including corn meal, went to the Confederate war effort via Sabine Pass.

The Union blockade also contributed to several Civil War battles in Jefferson County. In June 1861, the Union Navy established its blockade of the Confederate coast with the aim of excluding "all commercial intercourse from the ports of the insurgent states."[6] Though the Navy's primary focus was on the Confederacy's principal ports—New Orleans, Mobile, and Galveston—Sabine Pass was also subject to the blockade and Union interest, as an exporter of cotton and entry point into Texas. Aware of its critical location, the Confederacy built four earthen defensive forts along the Neches River, Sabine Lake, and Gulf between 1861 and 1863: Fort Sabine (1861), Fort Grigsby (1862), Fort Griffin (1863), and Fort Manhassett (1863) (none extant).[7] Built by locals and enslaved men, Fort Sabine and Fort Griffin became sites of several Civil War incidents.[8]

In September 1862, Fort Sabine came under Union fire. Unable to effectively return fire and hit the attacking vessels, Confederate forces abandoned the badly damaged fort and Sabine Pass surrendered

to Union forces. Despite capturing the port, Union forces occupied the city for only a brief period of time. Faced with growing cases of yellow fever in the area and reports of a Confederate counter-attack, Union forces withdrew from Sabine Pass after several months.[9] Just one year later, though, in need of cotton and hoping to secure Sabine Pass and entry into Texas, the Union sent 4,000 soldiers on four gunboats from New Orleans to Jefferson County in September 1863.[10] In what became known as the Second Battle of Sabine Pass, Lieutenant Richard Dowling and 46 men disabled the attacking Union ships with the fort's cannons (Figure 21). The men captured 300 Union prisoners and two gunboats, and another ship retreated to New Orleans.[11] Afterward, the Confederacy reinforced the fort in anticipation of another attack. The fort, and Jefferson County, did not see any other skirmishes during the war, and troops abandoned Fort Griffin in May 1865.[12] Though the site saw no more battles in its history, subsequent wars highlighted Sabine Pass's strategic location in the defense of the coast (see sidebar on Spanish-American War).

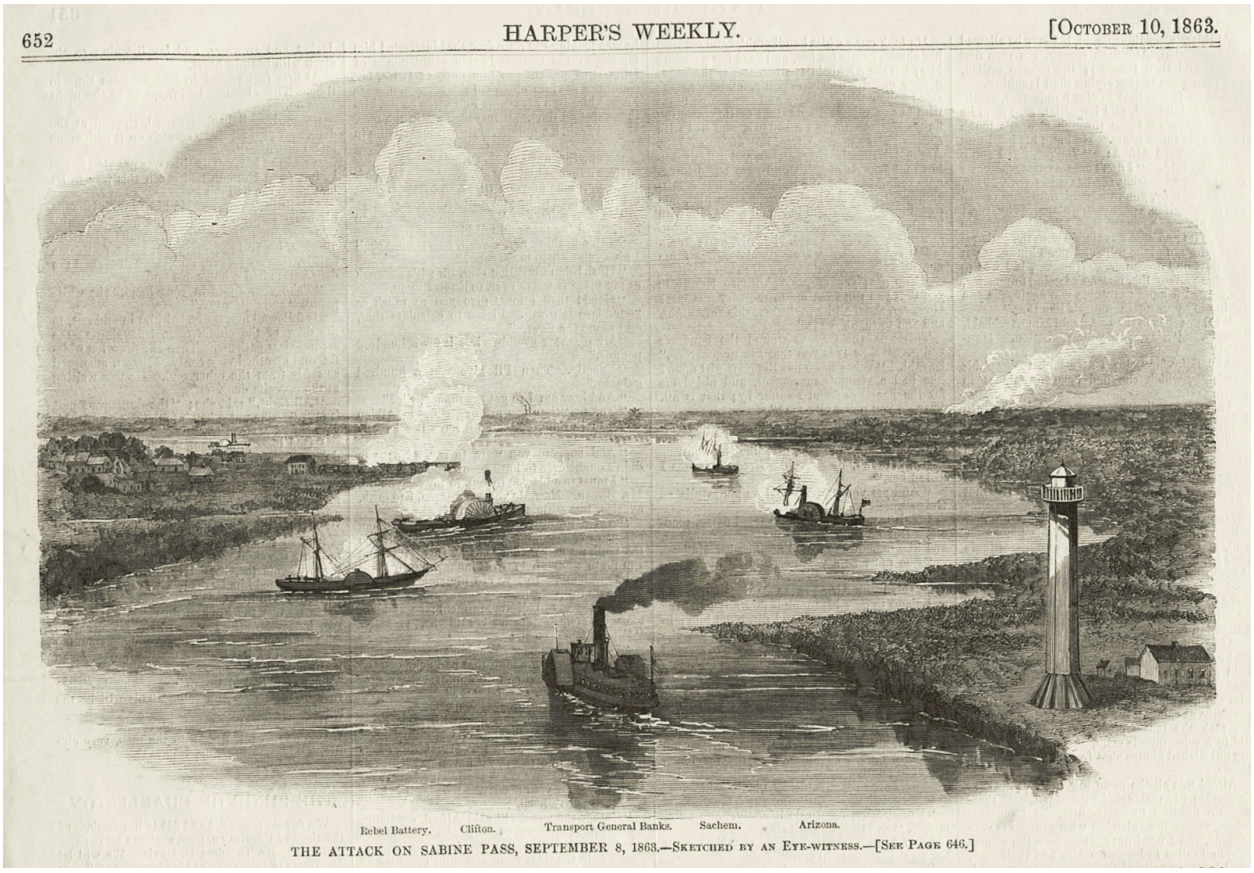

Figure 21. Depiction of the Second Battle of Sabine Pass in 1863. The right-hand side is Louisiana, and the left-hand side shows Sabine Pass. Source: Image available in accordance with Title 17 U. S. C. Section 107 from *The Handbook of Texas Online*, accessed January 11, 2022, https://www.tshaonline.org/handbook/entries/sabine-pass-battle-of.

**Sabine Pass and the Spanish-American War**

In the late 1890s, as tensions grew between the United States and Spain, the War Department included Sabine Pass in its defense plans. In May 1898, one month after the start of the Spanish-American War, construction began on two forts in Jefferson County on land granted by Augustus F. Kountze.[13] Locals and the government engineer completed the emplacements at Sabine Pass shortly after, though they never saw any military action. In December 1898, the U. S. and Spain signed the Treaty of Paris, ending the months-long war. In 1901, the U. S. abandoned plans for a permanent military installation at the site. Subsequent hurricanes have severely damaged the fortifications, and little evidence of them remains.

# RECONSTRUCTION AND POST-RECONSTRUCTION: 1866–1899

Between 1865 and 1867, the state government of Texas struggled to come to terms with the concessions required for reentry into the union of the United States – nullifying secession and ratifying the Thirteenth and Fourteenth Amendments to the U. S. Constitution. During this period, lawlessness prevailed across the state, and an estimated 379 murders of Black individuals by White individuals went largely unprosecuted. The First Reconstruction Act led the federal government to replace over 400 elected officials across the State of Texas with new officials who did not maintain secessionist views.[14] State representatives in Texas approved a new constitution that complied with federal requirements for readmission in November 1869.[15] The U. S. Congress officially readmitted the State of Texas on March 30, 1870.[16] Black male Texans then gained the right to vote and hold office (a right still denied to women of all races). When given the right to vote, Black men formed a political coalition with anti-secession White men (largely Republican at the time). This coalition elected 52 African-American men to serve in the Texas Legislature or as delegates at Texas Constitutional Conventions; none were elected from Jefferson County.[17] Despite these gains, by the late nineteenth century, the state's White majority adopted a series of discriminatory state and local laws that reversed Reconstruction policies that helped the freed Black population. As such, the economic successes of the period were not shared equally and benefited only the White population.

In Jefferson County, the Civil War reversed the county's population and economic gains from the 1840s and 1850s. Recording 94 fewer people in 1870 than in 1860, Jefferson County's loss of men and labor during the war had rippling effects on the county's agriculture and commerce. With population, crop yields, and manufacturing and commerce down immediately after the war, recovery was somewhat slow. Over the subsequent two decades though, the county's population and economy rebounded. Defined by prosperity in the lumber and milling industry, railroad building, and improvements to agriculture, by the end of the nineteenth century, Jefferson County boasted a robust economy, a growing population, and burgeoning cities and new towns.

## Population Demographics

After the drop in population between 1860 and 1870, Jefferson County steadily added residents in the 1870s and 1880s as it recovered from the war. The 1890s saw a dramatic increase in population, due in part to the railroad and lumber industry. Increasing more than 143 percent, the population of the county topped 10,000 for the first time (see Table 2). Across the state and in Jefferson County, the population grew more urban, with a majority of the county's residents settling in eastern Jefferson County. In 1890, 3,705 residents (63 percent of the county's total) lived in the county's two largest cities: Beaumont and Sabine Pass. By 1900, 10,690 (75 percent of the county's total) people lived in the county's three largest cities: Beaumont, Port Arthur, and Sabine Pass.[18]

*Table 2. U. S. Census statistics for Jefferson County showing population growth and demographic breakdowns between 1860 and 1900. Note that census statistics are subject to error, and census methodologies for recording race and ethnicity were inconsistent from decade to decade.*

| Year | Total | Growth Rate | White | | Black | | Foreign Born | | Hispanic Origin | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | No. | % | No. | % | No. | % | No. | % |
| **1860** | 1,995 | 8.6% | 1,684 | 84.4 | 311 | 15.6 | 136 | 6.8 | - | - |
| **1870** | 1,906 | -4.5% | 1,408 | 73.9 | 498 | 26.1 | 80 | 4.2 | - | - |
| **1880** | 3,353 | 75.9% | 2,290 | 68.3 | 1,199 | 35.8 | 186 | 5.5 | - | - |
| **1890** | 5,857 | 74.7% | 3,638 | 62.1 | 2,218 | 37.9 | - | | - | - |

While White men and women accounted for a majority of Jefferson County's population throughout the period, the newly freed African American population grew at a faster pace. While some African Americans stayed close to their former enslavers, working as farmers and sharecroppers, many others in the county sought new jobs working on the railroad and in industries like lumber. These jobs also brought in African Americans from outside the county. As a result, while the total African American population in Texas declined after the Civil War, Jefferson County's increased.[19] Because a majority of African Americans worked at the sawmills and freight facilities in Beaumont, by 1880 the city's population was 45 percent African American.[20]

Migrants from the South continued settling in the county, coming to farm and for jobs in the growing industrial sector and in newly developing cities. Migrants from Louisiana, including French Cajuns, continued to account for a large portion of the county's population growth. Because land was cheaper than in Louisiana, a number of rice farmers left the state, purchased land, and started rice farms in Jefferson County.[21] In what was dubbed a "grand march to the rice fields," farmers from Crowley came in droves beginning in 1892.[22]

A smaller number of European immigrants contributed to the county's growth in the late nineteenth century. While Galveston experienced rapid European immigration through its port, Jefferson County had fewer than 1,000 "foreign born" residents in 1900. Akin to the county's overall population growth, the "foreign born" population increased at its fastest pace in the 1890s. Among the immigrants to settle in Jefferson County were some Eastern European Jews. Fleeing persecution and oppression in Europe, they largely settled in Beaumont. Dutch immigrants accounted for another sliver of the immigrant population. Beginning in 1897, around 100 Dutch immigrants arrived and settled in Nederland as part of Arthur Stillwell's railroad and land development scheme. (See Land-Use Patterns and Community Development below for a discussion on the founding of Nederland).

## Agriculture

After the Civil War, farmers and ranchers slowly recovered. Pre-war farming trends generally continued under Reconstruction, as a majority of the county's farmers practiced subsistence farming. In the place of enslaved labor, some farmers adopted a system of sharecropping, allowing a tenant to work the land in return for a share of the crops. Farm owners could abuse the system though, providing scant wages or even withholding wages from tenants. Some freedmen and women entered sharecropping after the war, working for their former enslavers. While some African Americans remained sharecroppers or tenant farmers, census records from the period reveal that some Black residents in Jefferson County owned their own farms. The majority of farmers and ranchers though were White; according to the 1900 census, only 88 (14 percent) of the county's 630 farmers were Black.[23]

In the two decades following the war, farmers and ranchers slowly increased the amount of farm acreage in the county. Farmers grew a variety of crops including rice, corn, sweet potatoes, and some cotton, while cattle and milk cows accounted for much of the county's livestock. By the 1890s, though, agricultural practices began shifting as new technology and transportation systems aided farmers and ranchers. New steam-powered equipment, including tractors, threshers, and combines supplemented and replaced some animal-powered equipment, while railroads opened new markets (Figure 22). One of the biggest developments, though, was the advent of irrigation systems in the county, opening up more land for farming and improving existing farmland and crop yields. While all farmers and crops benefited from the system developed in the 1890s, rice farmers in particular saw an increase in their harvest yields.

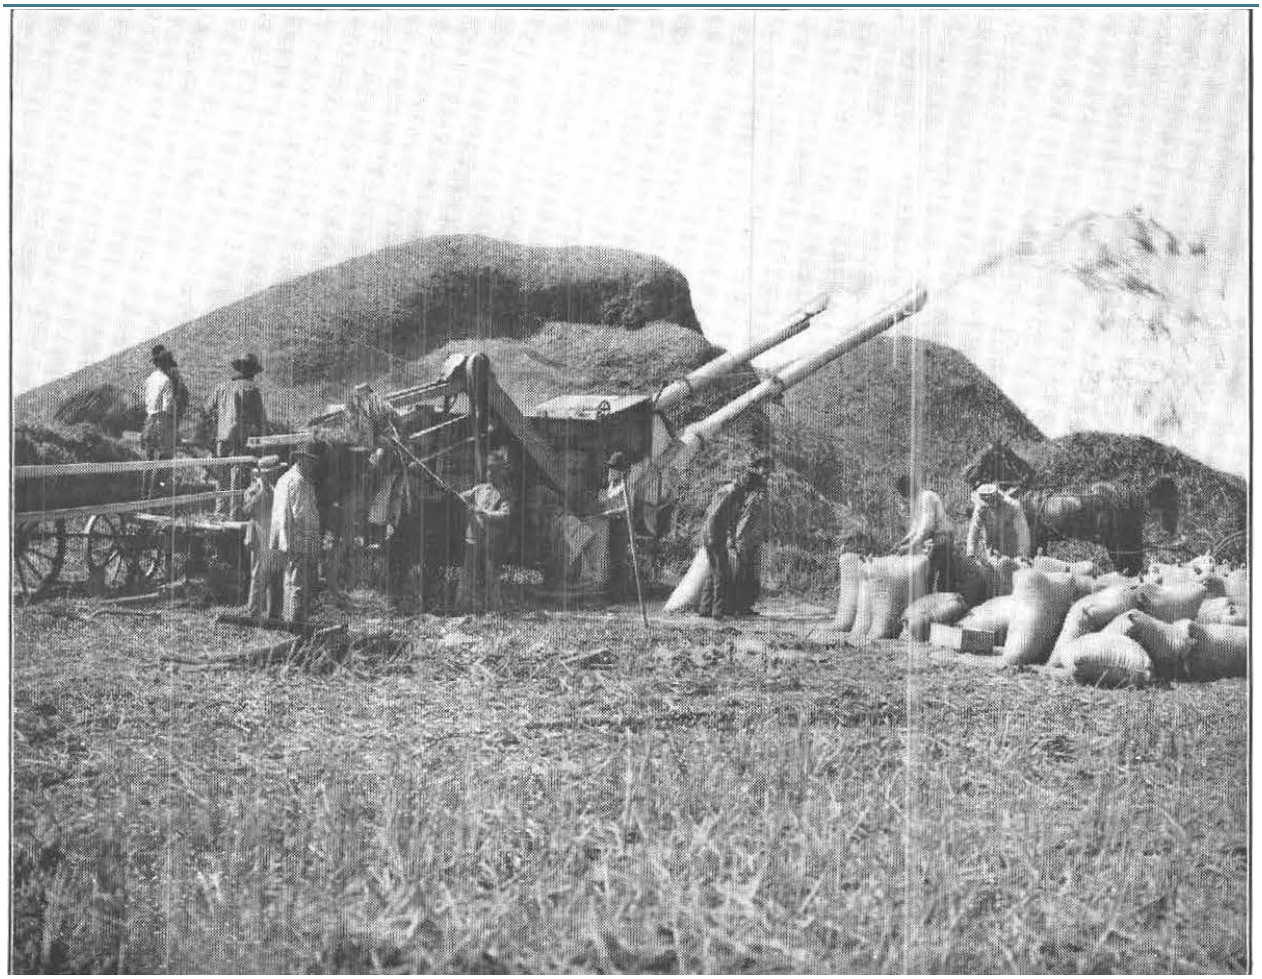

Figure 22. A rice thresher on the Port Arthur Irrigation Company's farm around 1902. The thresher was one of the advancements that farmers used in the late nineteenth century to increase crop yields. Source: Thomas U. Taylor, "Irrigation Systems of Texas," Department of the Interior, United States Geological Survey (Washington D. C.: Government Printing Office, 1902), 97.

**Real Estate Promotion and Agriculture**

In addition to railroads and town, irrigation, and port development, Arthur Stilwell was also involved in agriculture. As part of the promotion for the railroad and town development, Stilwell organized the Port Arthur Experimental Farm on 200 acres south of Nederland in 1895. The goal was to determine what crops and animals did well in the area and use that information to attract settlers to Nederland - the agricultural community he envisioned. A Dutch bulb grower and horticulturist came from the Netherlands to work on the farm and serve as a guide for the Dutch settlers. Among the various plants, vegetables, and fruit and nut trees grown on the farm, an 1897 report indicated success with cotton, rice, asparagus, tobacco, as well as pear, olive, and fig trees.[24] The farm also experimented with a variety of non-fruit-bearing trees and determined that umbrella china trees should be planted on the front lawns of the houses in Nederland.[25] Stilwell had a thousand trees brought over from Europe, though very few of these remain.

## RICE AND THE DEVELOPMENT OF IRRIGATION SYSTEMS

Farmers in Jefferson County had grown rice since the mid-nineteenth century, though yields fluctuated since the type of rice grown, dubbed "Providence Rice," relied on good weather and the right amount of rain. By the late 1880s, with the benefit of steam-powered equipment, farmers began producing larger, commercial rice yields grown on several hundreds of acres. Despite these larger yields, without a reliable source of water, farmers across the county were unable to realize the potential of rice as a commercial crop.

Between 1898 and 1902, private companies and individuals built hundreds of miles of main and lateral irrigation canals, primarily in eastern and southern Jefferson County (Figure 23). Pulling water from the

Neches River and its tributaries, Taylor Bayou, Hillebrandt Bayou, and Pine Island Bayou, the canal systems provided irrigation to roughly 44,380 acres in proximity to these waterways.[26] The systems consisted of canals, flumes, lifts, and one or multiple steam-powered pumping stations (Figure 24). Smaller, privately owned systems, like the Gill system on Taylor Bayou, irrigated between 400 and 600 acres and cost around $5,000.[27] Willard G. Lovell, using mules and manpower, dug his own system: three-and-a-half miles of main canal and three miles of lateral canals capable of irrigating 850 acres.[28] When he added a pumping system along the banks of Taylor Bayou, Lovell created Lovell Lake, one of several such reservoirs created as a result of the development of irrigation systems in the county (see Figure 23).

The irrigation companies had larger systems, costing up to $135,000 and irrigating between 2,000 and 12,000 acres.[29] In addition to the irrigation systems, the irrigation companies also owned rice farms serviced by their systems. Some companies, like McFaddin and Weiss, farmed their own land or sold it outright to settlers, while other companies entered into various rental agreements with settlers and farmers. The Jefferson County Rice Company sold its more than 10,000 acres of farmland south of Taylor Bayou to settlers on the crop-payment plan. Under this agreement, settlers paid $20 to $25 per acre-and-a-half and in return gave the company half their crop yield until the debt was erased.[30] Other companies, including the Port Arthur Rice and Irrigation Company and the Beaumont Irrigation Company—the largest in the county—rented land and charged for water. Under this system, the Beaumont Irrigation Company, which drew water from Pine Island Bayou, charged "2 sacks (162 pounds) an acre for water alone and 2 additional sacks where the company rents the land, making a total of 4 sacks an acre where both land and water are rented."[31] Though the full impact of the irrigation systems was not felt until the twentieth century, farmers and companies began seeing the benefit of irrigation by the end of the 1890s, putting Jefferson County rice farmers "first [in Texas] in extent of acreage and in successful cultivation."[32]

In areas outside the irrigation systems' reach, particularly in western and northwestern Jefferson County near Nome, Hamshire, and China, farmers relied on wells for watering crops. In Hamshire, farmers' steam-powered pumps drew from wells between 81 to more than 200 feet deep, irrigating between 120 to 300 acres.[33] Near China, a system of around five wells, owned by individual farmers, irrigated 875 acres of farmland.[34] Land in this part of the county, while producing lower crop yields, was also more affordable, selling for between $5 to $15 per acre, as opposed to $25 to $40 per acre serviced by the irrigation systems.[35]

In response to the rising rice harvests in the county—acreage rose from only 1,500 acres in 1891 to 43,000 acres in 1900—a thriving rice milling industry emerged.[36] By the turn of the century, Jefferson County was home to half of the state's rice mills. Often owned by the irrigation and farm companies, the mills opened in eastern Jefferson County. While the majority of the mills opened in Beaumont, other cities, including Port Arthur and Nederland, opened mills in the late nineteenth and early twentieth centuries (Figure 25).

## CATTLE

Recovering from a loss in cattle during the Civil War—when numbers dropped from 51,638 in 1862 to 40,163 in 1865—ranchers also faced several complications and changes during the period.[37] Ranchers contended with anthrax outbreaks, one in 1886 and one in 1899, as well as tick-borne diseases. While the tick-borne disease known as Texas Fever predominantly struck counties north of Southeast Texas, Jefferson County ranchers felt the repercussions as restrictions on cattle shipments from Texas limited out-of-state markets. Severe weather also impacted the livestock numbers in the county, with a storm in 1865 and the hurricane in 1886 inundating grazing lands along the coast and killing cattle.[38] One of the biggest impacts to ranching, though, was the decline in grazing lands due in part to the adoption of barbed wire and pasture fencing and the loss of land to rice farmers. Barbed wire, invented in 1874 and sold in Texas by John Gates (of Port Arthur fame), grew more popular in the state in the late nineteenth century, all but ending the era of the open range. As irrigation systems developed in the 1890s, rice farmers also increasingly sowed more acreage in the southern coastal areas historically used for grazing. These farmers became strong proponents of fencing as a means of keeping cattle out of the cultivated fields.

Despite the obstacles, ranching was not all complications during this period. Before the completion of the railroad network, ranchers continued the practice of driving cattle to market. Each year ranchers rounded up their cattle for branding before making the trek to Louisiana via the Opelousas Trail. Upon construction of the railroads in the county in the 1880s, ranchers began shipping their cattle to market via rail, losing fewer heads along the way. Ranchers also used barbed wire to subdivide their lands. This effort helped improve pastures after years of overgrazing caused areas of pasture depletion.[39] Considering the various factors associated with ranching in this period, ranchers increased the county's

cattle numbers steadily after the war, maintaining around 47,000 head of cattle during the late nineteenth century.[40]

One of the largest cattle owners in the period was William Perry Herring McFaddin. Despite selling some land to the Port Arthur Townsite Company (which became Port Arthur), McFaddin ultimately acquired additional ranch land. In the 1870s, McFaddin joined with the Weiss brothers and Obadiah Kyle of Beaumont and organized the Beaumont Pasture Company. The company purchased land in south Jefferson County with the intent of stocking it with cattle.[41] McFaddin ultimately acquired the land shortly after Kyle died and the Weiss brothers instead focused on milling.[42] In addition to the number of cattle he kept—3,000 in 1880—McFaddin was reportedly also the first rancher in the county to fence his land, erecting a fence from the Neches River to Rodair Gully (near FM 365 and Jade Avenue) in 1878.[43]

## Lumber and Sawmilling Industry

One of the first prosperous industries to emerge after the Civil War was the lumber and sawmilling industry. The industry began prior to the Civil War but entered into a period considered the "bonanza" era of lumber, in part fueled by demand for lumber and lumber products as a result of railroad construction, rebuilding after the war, and new town development in the county and Texas.[44] The booming industry not only served as an economic driver in the county, but it was also largely responsible for much of Jefferson County's population growth in the late nineteenth century.

**Lumber and the Emergence of a Black Community in Beaumont**

The booming sawmilling industry attracted an influx of workers to Jefferson County, many of them African American. By 1880, 55 percent of the sawmill labor force in the county was African American, many coming from farms in rural areas in and around Jefferson County.[45] As a result, Beaumont's Black population increased by 150 percent between 1860 and 1880, and new Black population nodes developed. Because a majority of the Black population worked at the sawmills, neighborhoods developed near the city's mills. Some companies, including the Reliance Lumber Company, had housing within their yard. Known as "Red Town" because the houses were painted red, a Black community developed within and along the roads to the yard in north and northwest Beaumont. In south Beaumont, near the Beaumont Lumber Company and Beaumont Sawmill, the South End Black (Charlton-Pollard neighborhood) community developed and would grow after the discovery of oil at Spindletop in 1901.[46] Additional Black neighborhoods developed in the twentieth century in Beaumont, but these early nodes formed the nuclei for the thriving African-American communities that contained their own business districts, medical facilities, schools, and churches. Outside of Beaumont, research did not reveal the emergence of similar Black lumber communities until the early twentieth century.

While new rail lines enabled more efficient shipping methods for moving timber to mills and lumber products to market, the pre-war practice of floating timber to mills downriver remained popular throughout the nineteenth century. Though Jefferson County had wooded areas along Pine Island Bayou and near Fannett, the lumber companies in this period primarily sourced their timber in counties to the north, including Jasper, Tyler, and Hardin. From the forests, companies shipped their lumber down the Neches River to mills in Jefferson County, where Beaumont emerged as the center of the industry. Other mills also operated sporadically in Port Neches and Sabine Pass during the period, but neither community rivaled Beaumont. By the turn of the century, six sawmills operated in and around Beaumont on the Neches River, cutting on average 300,000 board feet of wood, predominantly pine.[47] The county also had planing mills and sash and door plants. From the mills, wood products, including planed lumber, shingles, cross-ties, and bridges, were shipped out via rail and ship. By 1900, Beaumont ranked second in the state in the production of lumber products.[48]

## Transportation Networks

### RAILROADS

One of the most significant developments in Jefferson County after the Civil War was the construction of railroads. The two pre-war railroads had been abandoned or torn up for materials during the war, leaving the county without any railroad immediately after the war. By the end of the century, though, a network of railroads fanned outward from Beaumont in every direction (Figure 26).

The rebuilding of the railroad began in the late 1870s with the Texas and New Orleans Railroad. The first train ran on rebuilt track from Orange to Houston through northern Jefferson County in 1876, and by 1881, the line was extended east to New Orleans.[49] By 1883, with the completion of lines outside the county, the Texas and New Orleans Railroad became part of a major transcontinental route responsible for transporting both passengers and freight. The railroad added stops along the line in Buttfield (present-day Nome), Nashland (present-day China), Pine Island, and Amelia (within present-day Beaumont city limits).

The Texas and New Orleans Railroad expanded its holdings in 1882 by acquiring the Sabine and East Texas Railway. A year earlier, the company, originally named the East Texas Railway Company, completed lines between Beaumont and Sabine Pass and Beaumont and Kountze in Hardin County.[50] Railroad companies also built smaller, regional lines in the period. One such line was the Gulf, Beaumont and Kansas City, completed between 1896 between Beaumont and Kirbyville in Jasper County. The line, built by lumber baron John Kirby, was primarily a freight-lumber rail, but it also carried passengers into Beaumont.[51] Another regional line was the Gulf and Interstate Railway between Port Bolivar and Beaumont. Stops along this line included Hamshire, Fannett, and Cheek.

The Texas and New Orleans Railroad was not the only transcontinental railroad completed in the county during this period. Between 1895 and 1897, the Kansas City, Pittsburg and Gulf Railroad (KCP&G) (acquired by the Kansas City Southern Railway in 1900) completed its line from Kansas City, Missouri, to Port Arthur. The line was part of Arthur Stilwell's larger land- and port-development plan for Jefferson County. Stillwell, a spiritualist, author, railroad promoter, and town developer, arrived in Jefferson County from Kansas City, intent on establishing a shipping connection between the Midwest and the Gulf of Mexico. Using his railroad, the KCP&G, Stilwell aimed to connect Midwest farmers to a port on the Gulf Coast, opening new international markets for their goods. After a failed attempt at purchasing land from the Kountze family in Sabine Pass, Stilwell, under the corporate direction of the Port Arthur Townsite and Land Company, purchased 4,000 acres in 1895 for the new town and railroad terminus: Port Arthur.[52] Stilwell also ran his line through another townsite he helped develop: Nederland.

The rapid railroad construction of the late nineteenth century had immediate and long-term impacts on the growth of Jefferson County. As a result of the rail network, new markets opened, and existing ones were made more easily accessible, benefiting the county's agriculture, ports, and industries. The new transportation network also spurred the growth of existing communities, like Beaumont. Concentrated in and around the county seat and eastern Jefferson County, the railroads contributed to the city's importance and development as the county's commercial and industrial hub. The railroad also spurred the development of new communities in and outside of eastern Jefferson County (See the Land-Use Patterns and Community Development discussion).

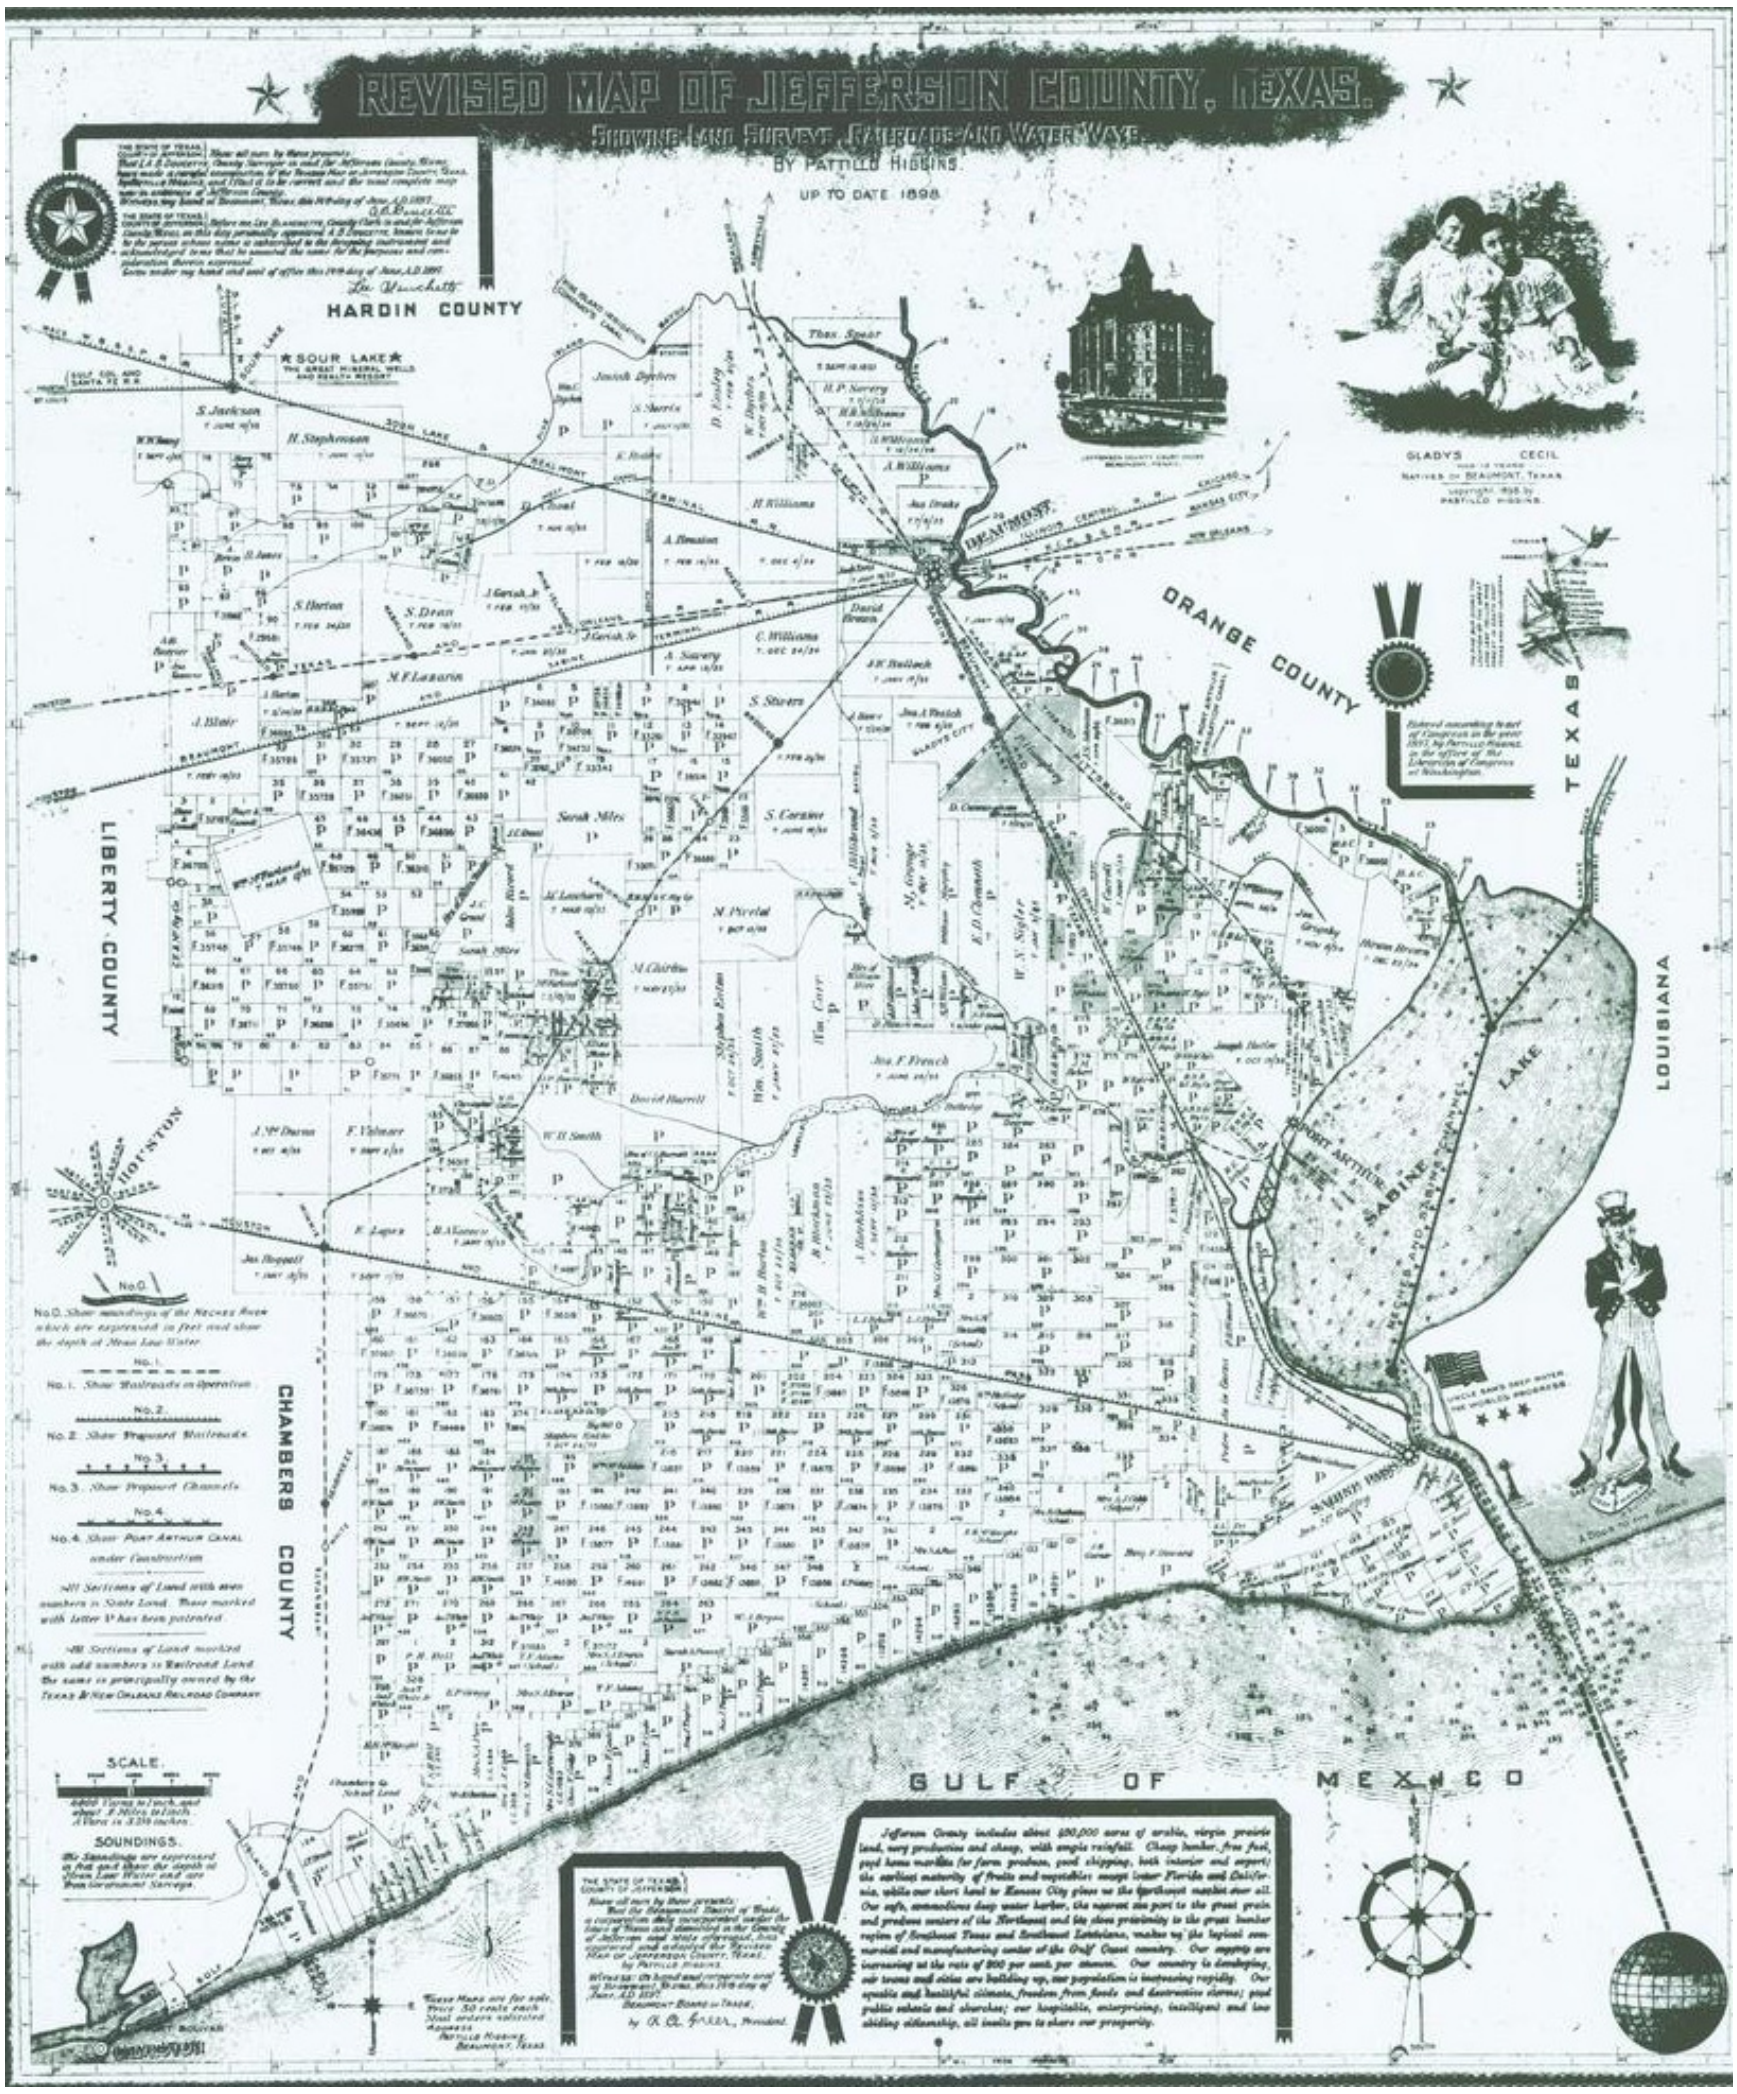

Figure 26. Map of Jefferson County in 1898 showing land division. Note the number of tracts patented to railroad companies, as well as the early development (through subdivision of parcels) of rural communities including Hamshire and Fannett. **Early Hunting and Sporting in Jefferson County**

With the opening of the railroads, previously hard-to-reach hunting lands in the county grew more easily accessible. Prior to the railroads, the southern marshlands, known for their abundance of waterfowl and muskrats, were mostly restricted to locals due to inaccessibility. Coinciding with a growing business class with leisure time, the completion of rail lines, first to Sabine Pass and then to Port Arthur, facilitated a growing hunting and outdoor culture as sportsmen from Houston and across Southeast Texas traveled to Jefferson County (Figure 27). A small industry developed around hunting, as hired guides took hunters from Port Arthur and Sabine Pass to the marshlands via boats. Though hunting clubs would not organize until the twentieth century in Jefferson County, a hunting lodge for visiting sportsmen at Keith Lake may have been the first such building in the county, built around 1897 (not extant).[53]

## PORT DEVELOPMENT

As early as the 1850s, government engineers recommended improvements to the Neches River and Sabine Lake to permit navigation of steamships. Despite the waterway's shallowness of depth in some areas, Sabine Pass emerged as an important port throughout the nineteenth century. Soft mud impacted early dredging attempts at Sabine Pass in the 1870s, but in 1882 the federal government approved the construction of jetties to protect the inlet and aid navigation.[54] Work on the jetties began

almost immediately and continued for roughly four decades, completed in the 1920s. At the time construction began, not only was Sabine Pass the county's second-largest city, but the completion of new rail lines and the jetty construction all suggested continued growth for the city and port.

The first blow to Sabine Pass was the hurricane of 1886. Hitting the city in October, the hurricane killed 86 people and destroyed all but two of the city's 77 residences.[55] The storm, in addition to its destruction, highlighted Sabine Pass's vulnerability to hurricanes and contributed to the town's decline. The second blow was the founding of Port Arthur. Originally wanting to end his rail line in Sabine Pass, Stilwell, unable to reach a deal with the Kountze family, settled on land to the north in what is now Port Arthur. From the new townsite emerged a port that rivaled Sabine Pass.

To develop Port Arthur into an official seaport and major shipping and commercial center, Stilwell realized the necessity of a deep-water canal. In 1899, the Army Corps of Engineers and Stilwell's KCP&G completed a 25-foot-deep channel along the west side of Sabine Lake from Taylor Bayou to Sabine Pass (Figure 28). The channel represented the first major improvement to the waterway and was a necessary first step in the development of Port Arthur and Beaumont as significant Texas port cities. The completion of the channel, opposed by citizens in Sabine Pass who argued the dredging for the project would impair their harbor, also shifted money and importance to Port Arthur and away from its southern neighbor. Sabine Pass maintained its port status through the end of the nineteenth century and into the twentieth century, though subsequent hurricanes in 1900 and 1915 and continued growth and investment in Port Arthur diminished its port activity and significance.

## Land-Use Patterns and Community Development

### EASTERN JEFFERSON COUNTY

Due to the prevalence of industry centered in and around Beaumont, the city experienced significant growth in the late nineteenth century. Already the government, commercial, and entertainment center of the county, industrial prosperity only strengthened its status as the county's principal city. As mills opened along the railroad lines and river between 1880 and the late 1890s, Beaumont's population rose from 1,600 to 9,000. Development mimicked the population growth as two postwar building booms, one in the 1870s and one in the 1890s, filled in downtown and residential areas.[56]

> ***Learn More!*** *Read about the development of Beaumont in the Beaumont Commercial Historic District National Register nomination and boundary and period of significance increase: https://atlas.thc.texas.gov/NR/pdfs/78002959/78002959.pdf and https://atlas.thc.texas.gov/NR/pdfs/07000892/07000892.pdf.*

The other large development of note was Port Arthur. Founded in 1895 by Arthur Stilwell, as part of his railroad and land development scheme, the city boasted 900 residents by 1900. In addition to its businesses, Port Arthur, by design, also had sites of recreation and entertainment, including Pleasure Pier, a 2,000-foot-long pier over Sabine Lake with restaurants and a natatorium. By the end of the century, John Gates, a Chicago businessman and barbed wire promoter, supplanted Stilwell as head of the railroad and oversaw the continued development of the bustling city.

> ***Learn More!*** *Read about the founding and development of Port Arthur in the Port Arthur Downtown Historic District National Register nomination: https://atlas.thc.texas.gov/NR/pdfs/100006046/100006046.pdf.*

Meanwhile, existing communities in eastern Jefferson County—Sabine Pass and Port Neches (Grigsby's Bluff)—remained relatively small. As previously discussed, Sabine Pass, despite early growth, suffered as a result of the 1886 hurricane and the founding of Port Arthur. With 460 residents in 1880, Sabine Pass only had 363 residents in 1900.[57] Port Neches maintained fewer than 100 residents throughout the nineteenth century. Bypassed by the railroads, Port Neches was rooted in agriculture and to a lesser extent milling, boasting a gristmill and shingle mill on the river at various times in the nineteenth century. A small commercial node with a grocery store was also established in what is known as Old Town Port Neches.[58]

Southeast of Port Neches, Arthur Stilwell's Port Arthur Townsite Company and the Port Arthur Land Company laid out the new community of Nederland around 1897. As part of the railroad promotion for Stilwell's KCP&G, he envisioned Nederland as a Dutch agricultural community. Named for the Dutch investors who provided Stilwell with capital for the construction of his railroad, Nederland was meant to stimulate development, population growth, and business along the new rail line while also creating money through the sale of land. The company promoted the town in the Netherlands, as well as in Dutch communities in Michigan and Iowa.[59] On present-day Boston Avenue, a three-story hotel, the Orange Hotel (not extant) opened along with two stores (not extant).[60] By the end of the nineteenth century, roughly 100 Dutch settlers arrived, most engaged in rice, truck, and dairy farming. The house at 505 North 12th Street—currently Broussard's Mortuary—is one of the few extant houses from the nineteenth century in Nederland (Figure 29). A two-story Classical Revival residence, the house was presumably one of the grander and larger homes built in Nederland during this period.

Despite their relatively small populations, both Port Neches and Nederland opened schools in the late nineteenth century. In Port Neches, a small school may have opened as early as 1860, but otherwise, education continued in private residences until the 1880s when small private schools opened first at Lee and Marion Streets and then on Sycamore Street.[61] In the 1890s, as the school grew crowded and in need of repairs, a local donated land for the construction of a new building (not extant, was located at the site of the First National Bank building). The building functioned as both a school and church, hosting

local Methodist and Baptist congregations (Figure 30).[62] In Nederland, a school was part of Stilwell's vision for the community, particularly since the majority of children needed to learn English. Behind the hotel, a one-room building served as the local school until 1900 when a hurricane destroyed the building.[63]

## RURAL JEFFERSON COUNTY

Outside of eastern Jefferson County, farmers and ranchers slowly continued settling in the sparsely populated lands. The 1862 map of the county shows that much of the land in the western half of the county, particularly removed from the waterways, remained in state control or had been patented to a railroad company for improvements (Figure 31). By 1898, very little change in regard to the division of land occurred, with the exception of railroad companies, in particular the Texas and New Orleans, having accumulated more patents (see Figure 26). While much of the land remained unsettled, the 1898 map does show the early development of several rural communities, while also providing insight into sites of future community development. Built around 1899, the property at 600 Blanch Road in China is an example of an early settler's homestead (Figure 32).

Directly associated with the new railroad lines in the county, small population nodes took root. Along the Gulf and Interstate, the nuclei of Fannett and Hamshire were both formed by 1898. As stops on the railroad, Fannett began after a general store opened near the tracks in the mid-1890s, while Hamshire's start began when it received a post office in 1897.[64] Cheek, another stop on the line, would be laid out in the early twentieth century. Similarly, along the rebuilt Texas and New Orleans line, the rural communities of China (originally named Nashland) and Nome (originally named Buttfield) were founded as water stops in the late nineteenth century.

For these communities, nineteenth-century development was generally limited to a post office and/or store, or nothing at all, though several newspaper accounts reveal an ice plant opened in 1898 in Hamshire in support of a local dairy farm.[65] Otherwise, farmers and ranchers living in and around these railroad stops remained fairly isolated. As in the early settlement period, education occurred in private residences and circuit priests and pastors primarily provided religious services. One exception was the Catholic church built in Hamshire around 1898. On one acre donated by local landowners Lovan and Azema Hamshire, the church served the area until it burned in 1960.[66] Despite the early formation of these rural communities, much of the community development and population growth occurred in the twentieth century. Typically, the only extant resources associated with early settlement include cemeteries.

Figure 31. Map of Jefferson County in 1862 showing land divisions and ownership. Note that much of the land in the western part of the county, particularly removed from the waterways, remained in state control or was patented to railroad companies. The southern marshy areas also remained unclaimed. # THE EARLY TWENTIETH CENTURY: 1900–1940

In 1900, Jefferson County had an established robust economy based on logging, agriculture, and transportation of goods via the railroad and ships. The discovery of oil at Spindletop in 1901, however, completely transformed the economy and development of the county. By World War II, Jefferson County was among the petrochemical leaders in Texas. Along with advances in agriculture and the expanded transportation network built over the period, Jefferson County experienced a period of rapid population growth that saw new nodes of development and urbanization. These locale-specific events were influenced by various national political shifts and events. Among these were immigration policies, the Good Roads Movement, World War I, and the Great Depression – each impacting the demographics and development of Jefferson County in various ways.

## POPULATION DEMOGRAPHICS

Between 1900 and 1940, Jefferson County experienced tremendous growth, adding over 130,000 new residents, a nearly 920 percent gain. The most significant growth occurred in the first decade of the twentieth century, after the discovery of oil at Spindletop. As the county's economy grew with rapid industrialization and increased agricultural production, each subsequent decade saw an increase in population, as new residents sought job opportunities in the county. Though the population growth significantly slowed during the 1930s and the Great Depression, Jefferson County still added over 10,000 residents over the decade.

*Table 3. U. S. Census statistics for Jefferson County showing population growth and demographic breakdowns between 1900 and 1940. Note that census statistics are subject to error, and census methodologies for recording race and ethnicity were inconsistent from decade to decade.*

| Year | Total | Growth Rate | White | | Black | | Foreign Born | | Hispanic Origin | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | No. | % | No. | % | No. | % | No. | % |
| **1900** | 14,289 | 144% | 10,290 | 72.0 | 3,942 | 27.6 | 947 | 6.6 | - | - |
| **1910** | 38,182 | 167% | 27,482 | 71.9 | 10,676 | 27.9 | 2,672 | 7.0 | - | - |
| **1920** | 73,120 | 91% | 49,687 | 67.9 | 19,580 | 26.8 | 3,081 | 4.2 | - | - |
| **1930** | 133,391 | 82% | 97,453 | 73.1 | 33,027 | 24.8 | 3,541 | 2.7 | - | - |
| **1940** | 145,329 | 9% | 107,933 | 74.3 | 33,821 | 23.3 | 3,519 | 2.4 | - | - |

White and Black residents contributed to the county's growth nearly evenly; the White population consistently accounted for around 70 percent of the county's total population, and the Black population consistently accounted for around 25 percent of the county's total population, many of them living in the county's largest cities, Beaumont and Port Arthur. Cajuns from Louisiana accounted for a considerable portion of the White growth, as they continued migrating to Jefferson County during this period. With fewer job opportunities in Louisiana, many came to Jefferson County for its many industry jobs in the oil fields, refineries, and shipyards. Some also left Louisiana and worked as farmers. So many Cajuns migrated to Jefferson County and Southeast Texas during this period that the region earned the moniker "Cajun Lapland."[1] Small numbers of second-generation European Americans also moved to Jefferson County. Among them were some Swedish Americans from the Midwest who settled outside the county's urban areas and engaged in farming.[2] Black residents also came to Jefferson County for work opportunities. The industrialization and urbanization in eastern Jefferson County provided a number of unskilled and manual labor jobs in the two largest cities. Black residents also worked in the lumber industry. Throughout the period, the majority—over 90 percent in 1940—of the county's Black population lived in Beaumont and Port Arthur.[3]

One small segment of the population, despite more than tripling in number, incrementally accounted for a smaller percentage of the county's population throughout the period. The percentage of foreign-born residents grew in the first decade of the twentieth century and declined over each subsequent decade until 1940. During the first decade of growth, small numbers of Dutch farmers continued trickling in and around Nederland in the first few years of the 1900s, as did some Jewish immigrants from Eastern Europe who primarily settled in Beaumont, where a small Jewish community was developing. As in the late nineteenth century, Russian and Eastern European Jewish immigrants in the early twentieth century fled Europe to escape persecution, oppression, and state-sponsored murder.[4] Small numbers of Mexicans also settled in Jefferson County as part of a larger wave of Mexican migration to the United States between 1910 and 1930, during and immediately following the Mexican Revolution. During this period the U. S. census did not report the number of "Hispanic" residents, but records reveal Mexicans in Jefferson County working as laborers on farms, as well as in plants like the Union Sulphur Company plant in Sabine.[5] Mexicans also worked in the refineries, replacing men drafted during World War I.[6]

The other foreign-born population of note is the Japanese, first arriving in Jefferson County in the early twentieth century for rice farming. Invited by the U. S. government and welcomed by municipalities and local chambers of commerce in Southeast Texas, Japanese men came to the region in search of economic advancement. (See the discussion that follows on the rice industry for more information). Though Texas was home to fewer than 400 Japanese individuals in 1910, growing xenophobia and nationalism at both the state and national level led to the passage of new laws that significantly curtailed immigration in the early 1920s. In 1921 Texas passed the Alien Land Law, prohibiting foreign-born Japanese people from purchasing or leasing any additional farmland.[7] The subsequent passage of the federal Immigration Act of 1924, which limited the number of immigrants allowed into the United States and particularly targeted the Japanese, essentially ended Japanese immigration to Jefferson County and contributed to the return of Japanese in the county to their home country. In Jefferson County, the number of Japanese was likely less than 100.

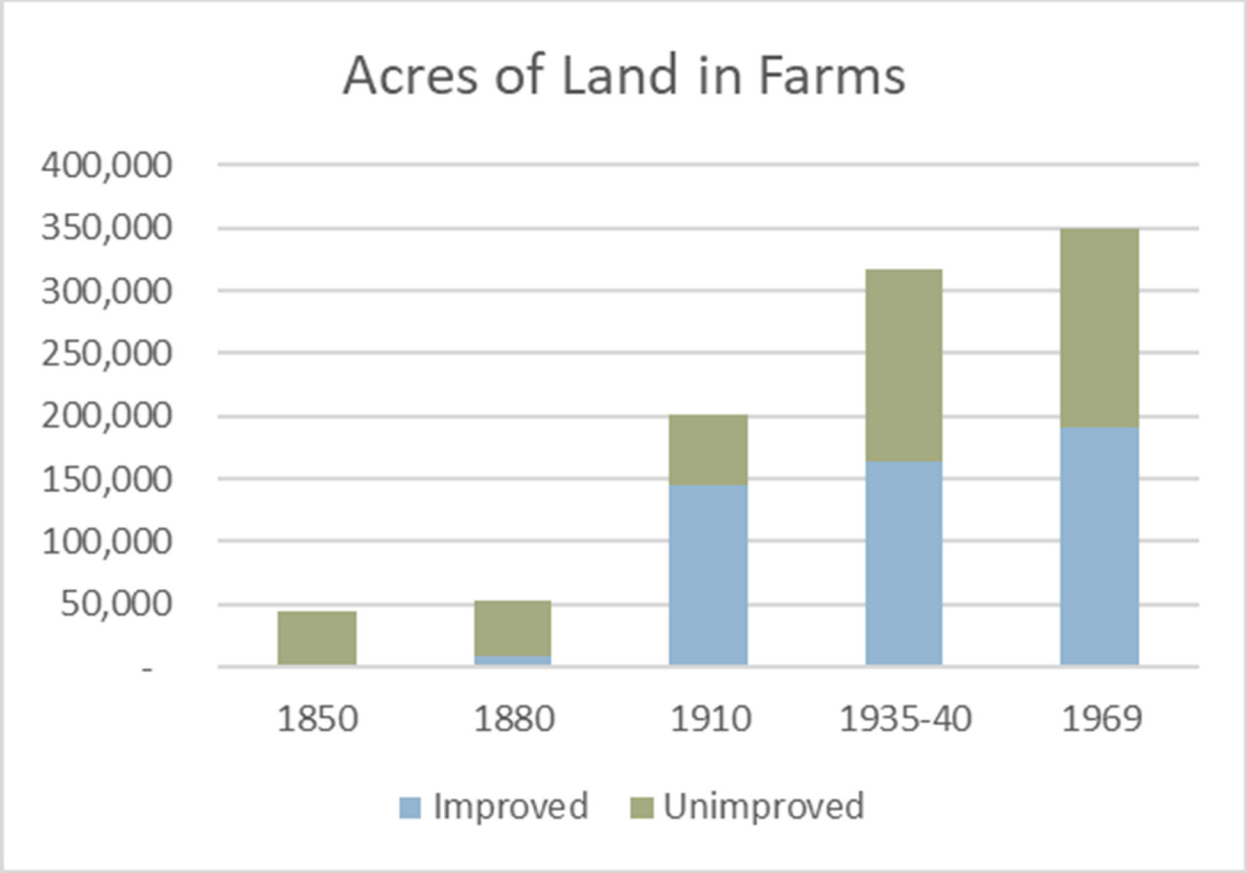

## AGRICULTURE

The twentieth century ushered in a new era of farming in Jefferson County. For much of the previous century, with several exceptions, farmers grew crops primarily for subsistence, and outputs were generally small. The groundwork laid in the late nineteenth century—including the completion of canals for irrigation and the opening of northern markets with the completion of the Kansas City Southern Railway—led to large-scale agricultural production in Jefferson County. Over the subsequent four decades, the growing population, mechanization of agriculture, and expanded transportation and irrigation and drainage networks created more agricultural lands, facilitating increased livestock and crop revenues. During this period, the number of farms and land devoted to agriculture increased in Jefferson County. As a result, productivity of livestock and many crops reached their historic highs (Tables 4-5).[8]

*Table 4. Table showing the increase in farms over the period. Source: U. S. Department of Agriculture Census of Agriculture Historical Archive, 1900-1940, https://agcensus.library.cornell.edu/.*

| Year | No. Farms |
|---|---|
| **1900** | 360 |
| **1910** | 586 |
| **1920** | 419 |
| **1925** | 651 |
| **1940** | 1,616 |

*Table 5. Chart showing the increase in agricultural land in Jefferson County between 1850 and 1969. Improved acreage in blue and unimproved acreage in green. Source: U. S. Department of Agriculture Census of Agriculture Historical Archive, 1850-1969, https://agcensus.library.cornell.edu/.*

The expanded agricultural production in the county also saw the opening of more mills—grain, corn, feed, and rice—along with gins, canneries, creameries, and produce dealers. While the farmers in Jefferson County generally lived in the central, western, northern, and eastern areas outside of the urban areas, the mills, gins, and dealers were by-in-large confined to Beaumont and Port Arthur. Outside those cities, Nederland at various times in the period was home to the Nederland Rice Company and the Nederland Grain Company.

As in the previous period, farm tenancy remained common in the early twentieth century. While tenancy dropped across much of the state during this period, tenancy fluctuated in Jefferson County, increasing significantly in the 1900s, before declining and increasing again during the Great Depression. Farm tenancy increased so much during the Great Depression that the number of owner-operated farmers and tenant farms were nearly equal.[9]

> ***Learn more!*** *Read about tenant farming in Texas: https://www.tshaonline.org/handbook/entries/farm-tenancy.*

## Truck and Fruit Farming

Though rice was the leading commercial crop grown in the county, farmers also grew a variety of crops both supplementally and independently of rice. Truck farming—small-acreage farms that grew a variety of fruits, vegetables, and nuts—was popular across the county until the late 1930s. Some produce—particularly cabbage and potatoes—was shipped to markets outside the state, but most was consumed in-county and sold at stores in Beaumont and Port Arthur.[10]

Throughout the period, and particularly during periods of decline in the rice industry, farmers also grew cotton, sugar cane, pecans, and figs, and experimented with crops including citrus plants. These crops, particularly cotton, sugar cane, and figs, proved important in the county's agriculture economy. Accounting for a significant portion of the county's crop output, historian W. T. Block, Jr. recalled fields of cotton lining present-day US 90 to the north and orchards of fig trees to the south between Amelia and China.[11] Citrus on the other hand was grown with varying degrees of success. Farmers first planted around 40,000 orange and tangerine trees in the county in 1910 on the recommendation of the U. S. Department of Agriculture after a period of decline in the rice industry.[12] Farmers continued planting citrus plants into the 1920s, though many were thwarted by periods of unseasonable cold before largely abandoning the orchards late in the period. Sugar cane proved more successful in Jefferson County. By the 1910s, Jefferson County produced enough sugar cane that around five small sugar mills opened in Port Neches and Nederland. By 1940 sugar was one of the county's top crops, with farmers having more than doubled the number of pounds of sugar cane grown since 1910.[13] Farmers also found success with fig trees. Around 1910, farmers planted approximately 50,000 fig trees in and around Amelia (present-day Beaumont), Cheek, and Hamshire, and by the late 1910s and early 1920s, Jefferson County had several fig canning plants.[14] Though Beaumont claimed most of the plants, one of the fig canning companies in the city also operated a cannery in Hamshire. Opened in 1924, the Beaumont-Hamshire Fig Company plant was owned by around 25 fig growers in the county and produced up to $120,000 worth of preserved figs throughout the 1920s (Figure 33).[15] Labeled "Texas Pride," the canned figs from the plant were primarily sent to cities on the East Coast.[16]

The Great Depression, combined with other factors including overproduction and blight, saw the decline of some crops, including figs and cotton – a trend that continued into the latter half of the twentieth century. Even so, by 1940, farming remained an essential economic sector in Jefferson County and employed a majority of the population outside of Beaumont and Port Arthur.

## Rice

In 1900, Jefferson County produced less than 10,000 pounds of rice and by 1940, near the industry's peak, farmers harvested over 100,000,000 pounds, or 2 million bushels.[17] Annually, farmers devoted 40,000 to 100,000 acres of land to rice, accounting for more than half of the county's improved farmland some years (Figure 34). Throughout the period, Jefferson County was among the state's top rice producing counties—the top in 1940—as well as one of the country's top rice producers.[18] Mechanization was a significant factor in the growth of the rice industry during this period. New technology, including the combine harvester-thresher, previously used only for wheat, made harvesting and separating rice more efficient. Another advancement was the rice dryer, a machine used to dry wet rice before storing or milling. In 1930, the Texas Public Service Company of Beaumont erected the county's first rice dryer in Nome (replaced in the postwar period) (Figure 35).[19]

Despite advances in technology that aided growth, the rice industry and its farmers faced a number of difficulties. Factors, including overproduction, salination of canal water caused by the dredging of the Neches River, World War I, and the Great Depression all contributed to periods of decline. As a whole though, the industry weathered these storms and rebounded, aided by the new technology, as well as new seed, immigration of workers, improved irrigation and drainage, and farmer organization.

### JAPANESE RICE FARMERS

One of the first significant factors was the arrival of Japanese immigrants in the county. Through a collaboration between the U. S. Department of Agriculture and the Japanese government, Japanese men arrived in Southeast Texas beginning in the early 1900s. Hoping the Japanese would invest in the state's rice industry, the U. S. government and local municipalities sought men with money—bankers, professionals, etc.—rather than farmers. These men would in turn hire Japanese farmers to come and work on their farms in the United States. The government hoped the rice seed brought over from Japan and the Japanese horticulture knowledge and experience would help Texas farmers, teaching them, among other things, how to grow rice in hurricane-prone areas (similar to typhoons in Japan).[20] The Japanese, believing Japan was on the verge of a food shortage caused by a population explosion, saw Texas as a refuge and possible source of food for Japan.[21] As a result, Japanese rice colonies popped up across Southeast Texas, including in Jefferson County (see Sidebar on Yoshio Mayumi). For nearly two decades, the Japanese rice colonies were largely successful, and the Houston chapter of the Japanese American Citizens League reported that the Japanese seed yielded two times as much rice in the first several years.[22] By the mid-1920s though, most of the Japanese farmers had returned to Japan, following the economic difficulties created by World War I and the immigration, naturalization, and property ownership restrictions placed on them by the Texas Alien Land Law and the Immigration Act of 1924.

**Yoshio Mayumi**

The historic rice industry present in Jefferson County attracted people from all over the world, including Japanese investor Yoshio Mayumi. On December 1, 1874, Yoshio Mayumi was born to the prominent Mayumi family in Tsukiji-machi, Tsu City, Mie Prefecture, Japan (Figure 36). Though the Mayumis' status as a powerful samurai family waned by the time of his birth, Yoshio was determined to become a successful businessman. At age 16, Yoshio traveled to Tokyo to attend Keio Gijuku, now known as Keio University, where he became specifically interested in overseas investments.

In the early twentieth century, Mayumi arrived in Texas from Japan after learning the potential of rice growing in the area. Mayumi surveyed different plots of land, eventually purchasing 1,734.43 acres of land in Fannett in Jefferson County. Mayumi then hired Japanese contract workers to farm the land, which proved to be difficult manual labor. His younger brother Yasuo joined him soon after, and together they solved labor issues and

improved efficiency. They built a large, three-story house with quarters for laborers and roads and irrigation pumps to match the machine-powered rice farms in Texas (no known buildings associated with Mayumi remain). By 1909, Mayumi's rice operation was the third-largest Japanese rice farm in Texas. Still, they initially faced some suspicion from the community in Fannett, most likely due to American anti-Asian sentiment at the time. To combat this, Yoshio and Yasuo made a concerted effort to be a part of the community by building a long, one-room dance hall where people from the area would come to socialize. The people of Fannett warmed to the Mayumi family and their hospitality, but the U. S. government would not mirror that welcome. Though the Mayumi farm survived the rice market collapse in 1920, the U. S. government became more and more hostile to Japanese immigrants, with the Texas legislature barring Japanese immigrants from buying land in 1921 and the U. S. Congress banning Japanese immigrants and foreign-born Japanese people from acquiring citizenship. Feeling that it was time to leave, Yoshio sold all 1,734.43 acres to brothers John Jay and George Burrell for $21,000. Yoshio left many of his furnishings and traditional Japanese kitchenware to his friends in Fannett. Until 2004, the road on which Mayumi lived was named Jap Road. Outside of Fannett, the 4.3-mile stretch of road was renamed Boondocks Road after advocacy groups, including the Japanese American Citizens League and the Anti-Defamation League, filed complaints.

## RICE FARMER ORGANIZATION AND COOPERATIONS

By 1905 and 1906, the rice harvest in Jefferson County's was so bountiful it resulted in an oversupply and subsequent drop in prices. The fall in rice prices caused the closure of several of the county's four rice mills, including the Nederland Rice Milling Corporation, organized just several years earlier.[23] Rice farmers were hurt further by the national recession in 1907 and increasing contamination of irrigation canals with salt water from deepening the Neches River, forcing some farmers out of the county or into other crops including cotton, figs, and sugar cane. Other rice farmers, in reaction to the setbacks of the early twentieth century, formed the Jefferson County Rice Farmers Association in 1906. The group met monthly, discussing "subjects of vital importance," including fertilizers, irrigation and cultivation

methods, and seeds.[24] In 1908, *The Standard Blue Book of Texas*, a who's who guide to Texas, called the association the "strongest independent organization of rice farmers in the United States."[25]

A reflection of their power, the county's rice growers, worried about increased dredging of the Neches River and saltwater encroachment in the canals, successfully attached a bond provision requiring the construction of a saltwater guard lock. If the City of Beaumont was to contribute to the project, they had to agree to a saltwater guard lock. One was constructed six miles above Port Arthur, and it worked for a time, but continuing work on the waterway proceeded to let saltwater into the canals. The lock was eventually removed in the 1950s. Despite its limited success, the investment in construction of the lock reflected the rice growers' influence and power.[26]

County rice growers could also join the Texas-Louisiana Ricer Farmers Association (organized in 1909), the Southern Ricer Growers Association (organized in 1910 with headquarters in Beaumont), and the American Rice Growers Cooperative Association (organized in 1921). These groups advised farmers on a variety of issues, including when to sell or hold on to crops. The rice growers' associations also worked with organizations including the U. S. Department of Agriculture and Texas A&M University, which opened a rice experiment farm in Amelia in 1909 (moved to a new location in Beaumont in 1945) (Figure 37). The experiment farm, which became Substation No. 4 of the Texas Agricultural Experiment Station, helped the association and county rice farmers develop a new seed, when the Honduran and Japanese seeds commonly used began producing increasingly smaller and deteriorated yields.[27] The organization and cooperation between farmers and the government proved crucial in helping the industry weather subsequent rice crashes following World War I and during the Great Depression.

Figure 37. Image of the Amelia Experimental Farm from around 1920. Researchers and farmers at the station worked on improving rice propagation and varieties. The farm operated at the site in Amelia until 1945 when it outgrew the facilities. At that time the farm relocated to Beaumont where it remains. Source: *The School Review of Jefferson County, Texas,* published for the Schools of Jefferson County (1921): 36.

### IRRIGATION AND DRAINAGE

One of the other critical pieces that benefited not only rice farmers, but all farmers in the county, was improved irrigation and drainage. In 1900, all the irrigation canals in the county were privately owned and primarily benefited farmers along Pine Island Bayou, Taylor Bayou, Hillebrandt Bayou, and the Neches River. Authorization by the Texas legislature in 1905 paved the way for the creation of publicly owned and operated drainage districts that would, among other things, open more land for irrigation and drainage, creating tillable land in areas previously untillable. In Jefferson County, the County Commissioners Court and voters agreed on the need for drainage districts for future development and agriculture in the county, establishing several districts during the period.[28]

The first drainage district in Jefferson County was Drainage District No. 3 in west central Jefferson County. A group of around 50 citizens in the Hamshire area petitioned the County Commissioners Court in 1912 to establish a drainage district, arguing the need for area farmers.[29] Voters approved the district in May 1912; it was only the third drainage district in the state.[30] Funded through the issuance of a bond and constructed in part with equipment borrowed from local farmers and ranchers, the drainage district widened and deepened area waterways and constructed ditches that improved drainage, reduced mosquitoes, and facilitated better farming (Figure 38).[31] A second drainage district, Drainage District No. 6, was established in 1920 in northern Jefferson County, encompassing Beaumont, China, Nome, Fannett, Cheek, and LaBelle.[32] The new drainage districts created new farmland across the county. In some instances, as demand for rice grew, some marshlands in the south were drained to make way for rice fields.

Water control in the county was further improved in 1933 with the establishment of the Lower Neches Valley Authority (LNVA). Created by the Texas legislature, the purpose of the LNVA was to store, control, and utilize the water of the lower Neches River. The water authority, which encompasses all of Jefferson, Hardin, and Tyler counties and parts of Jasper, Liberty, and Chambers counties, includes 400 miles of canals that supply water to towns, industries, and farmers in Jefferson County. The LNVA incorporated many of the privately owned canal systems from the late nineteenth century into their growing network and also built temporary saltwater barriers on Pine Island Bayou and the Neches River to stop the flow of saltwater into the irrigation canals (removed when a permanent barrier built in the 2000s).

Figure 38. Construction work on drainage ditches in Drainage District No. 3 in the 1910s. Source: Jefferson County Drainage District 3, accessed December 14, 2021, https://jcdd3.org/history/.

## Livestock and Dairy

Following patterns set in the nineteenth century, small numbers of livestock grazed on farms across the county, while the majority of dairy farms were located in and around Nederland, and the county's larger

ranches generally occupied the southern part of the county, where the land was well suited for grazing. During this period, livestock numbers and values experienced significant growth, similar to farming. The number of livestock in the county reached its peak between 1935 and 1940, with pigs, poultry, and cattle all reaching their highest numbers in the last decade before World War II. Cattle—beef and dairy—were by far the most significant livestock in the county and in 1936, the county claimed to have "a greater number of cattle per square mile than any area in the United States."[33] Cattle also remained the most profitable livestock in the county, valued at more than $1.2 million in 1940.[34]

### DAIRY FARMING

Dairy farming and dairy products were a significant part of the cattle industry in Jefferson County during this period. Growing in economic importance over the period, by 1940, dairy products earned more than beef cattle, bringing in around $750,000 annually.[35] Supporting the growing dairy industry were the dairy farms, mostly located in southeastern Jefferson County, that increased the number of dairy cows by around 30 percent between 1900 and 1940. Many of the farmers in the area first turned to dairying and ranching after the first rice collapse in the early 1900s, with others abandoning the crop and truck farming altogether in the 1910s and 1920 due to the profitability of the business.[36] Over the period, Nederland emerged as the de facto headquarters for the county's dairy industry, as it was "home to hundreds of head of the finest dairy cattle in the section of the country."[37] Its more than 35 dairy farms were among those that formed a dairy cooperative in the early 1920s.[38] Among its dairy farms was the Lohmann Brothers Dairy (became the Walling Jersey Farm in 1939), which in 1935 occupied the land encompassing Doornbos Park, Hillcrest Elementary School, and some of the neighboring subdivisions (Figure 39).[39] These area dairy farmers supplied their milk to creameries in Port Arthur and Beaumont, which produced a majority of the county's milk, butter, and other dairy products.

### BEEF CATTLE

Despite falling to the dairy industry in 1940, beef cattle was the county's most important livestock, in terms of income, for much of the period. The number of cattle in the county more than doubled over the first four decades of the twentieth century and brought in more than $500,000 in 1939.[40] Ranching practices from the late nineteenth century carried over—pastures remained fenced and cattle were shipped via rail to market—while ranchers adopted new methods of pasturing, breeding, sanitation, and pest control. During the twentieth century, ranchers replaced most of the longhorns with new breeds of cattle. The Brahma, first introduced in Jefferson County in the early 1900s, was well suited to the Gulf Coast and quickly became the leading breed in the county. Landowners also incorporated practices aimed at pasture improvement and conservation. Methods included planting grass and clover seed in pastures, as well as rotating fields annually between crops—particularly rice—and grazing.[41] These practices, along with the improved road network and cold storage facilities "transformed beef production into a highly specialized industry."[42]

In 1940, Jefferson County recorded around 44,000 beef cattle on approximately 350 farms and ranches. Smaller farms across the county often had cattle, but the majority of cattle in the county were raised on ranches with thousands of head of cattle in the southern part of the county. Some nineteenth century ranch families maintained their operations in the twentieth century, accounting for some of the largest numbers of cattle in the county. Among them were the nearly 30,000-acre Pipkin Ranch near Big Hill and the more than 100,000-acre McFaddin Ranch (partially in Chambers County), owned by W. P. H. McFaddin, Jr., a third-generation rancher and also president of the Coastal Cattle Association (Figure 40).[43] The property belonged to the McFaddin Trust when it was cut in two by the completion of the Gulf Intracoastal Canal in the early 1930s. Barbed wire fences were subsequently erected along the canal, and a new coastal ranching practice was adopted. To keep pastures in rotation, the herd of cattle spent winter south of the canal and the summer in pastures to the north, swimming across the Gulf Intracoastal Canal between the fields (Figure 41).[44] McFaddin, Pipkin, and other ranches also started the practice of opening and/or leasing their ranch lands for hunting and fishing, as they contained some of

the most diverse waterfowl habitats in the state (as further discussed in the Parks and Open Space section).[45]

# RANDOM SKETCHES

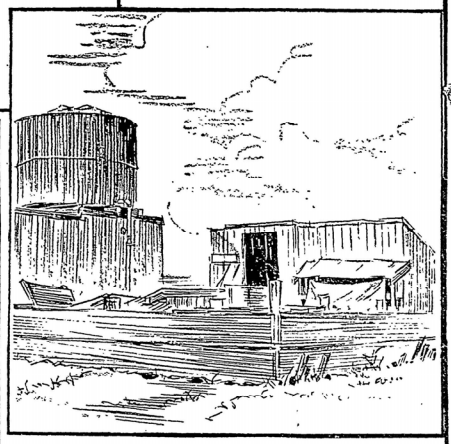

Out Around Big Hill

By Dennis McCarthy

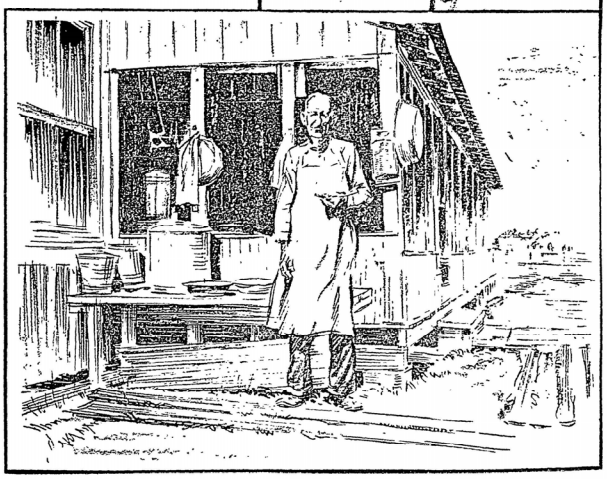

## Foreman, the Cook and the Ranch House

It's a gulf breeze-swept savanna of luxuriant marshland over which 3500 head of cattle graze throughout the 12 months of the year. The Pipkin ranch approximates 30,000 acres of level coastal soil stretching to the southern boundary of Jefferson county and has borne the Pipkin name for more than half a century.

Its infinitely flat terrain quite suddenly is broken at Big Hill, where a huge grassy and tree-fringed bubble of earth rises slowly to interrupt the endless monotony of the marsh tableland.

Pipkin ranch headquarters are at Big Hill. Here picturesquely knitted together is an intact group of ranch structures, so distinct in pattern and arrangement as to beggar a conventional architectural period, description, a past or contemporary motif.

Dominating the pens, corrals, bath house, saddle shack and minor adjoining units making up the Big Hill group, is the ranch house proper. A low-roofed, whitewashed, frame dwelling, its spacious screened facade faces the south and, in defiance of summer's parching breath along the marsh, a refreshing and constant breeze from the sea sweeps through the ranch house, its sleeping quarters, mess hall and kitchen.

When it's cow time out around Big Hill, the "Boss Man" over that way is Buckaroo Fred Burrell, a bronzed veteran cattle hand, sketched at upper left. Fred has been foreman at the Pipkin ranch 25 years or more. In fact, Fred has been in the employ of the Pipkin family since he was a 'teen age kid. At one time he worked around John Pipkin's Beaumont livery stable.

Fred was born at Burrell's cove—now Wingate ranch. He can't recall a time in his life when he wasn't around "critters." He started running cattle for Ben Hebert and Lovan Hamshire when he was 13.

Next in command at Big Hill headquarters is another Burrell—another veteran cattle hand—and Fred's brother, Mender. Mender has known many years of range life, but for the last 10 years has supervised the mess at the ranch house, preparing hearty and adequate dishes for a crew—during branding and dipping season—in excess of 15 cow hands.

Just the other day Steve Pipkin allowed Mender was a pretty good cook.

"Of course, you wouldn't expect him to hold down a chef's job in one of Beaumont's downtown hotels, but for dishing out good ranch grub, I'd say Mender would do a right smart job."

So Mender is tops as a ranch victual hand and is sketched herewith at right center.

The sketch at upper right indicates the general pattern of the ranch yard and shows a portion of the interminable stretch of wooden pens that surround the place. The structure in the foreground serves as saddle house.

The sketch at left center shows a corner of the ranch house. In the center sketch the bath house—for the hands, of course—is pictured. A soiled tarpaulin assures privacy; a full cistern assures ample water. There's a bar of kitchen soap there also. The plumbing arrangement? Oh, now let's not get too nosey.

At lower right, houseman Mender is featured, and, surrounded as he is with pots and pans, the worthy gentleman lends a thoroughly domestic tone to this portion of the ranch house.

# INDUSTRY

## Lumber

At the turn of the century, lumber was one of Jefferson County's primary industries. Beaumont served as the center of the industry, boasting six sawmills, as well as planing mills and sash and door woodworking plants in the early 1900s.[46] Due to a number of factors though, the industry's importance declined over the period. Despite this decline, the lumber industry was an influential factor in the economy and development of the county in the early twentieth century.

Whereas in the previous period lumber mills in Jefferson County opened on its waterways, in the twentieth century sawmills opened on the railroads. No longer reliant on the waterways for transportation, lumber companies opened mills closer to the source of lumber. While some lumber companies bypassed Jefferson County altogether and opened mills in more heavily wooded counties in East Texas, several lumber companies opened up sawmills in the county in the early twentieth century. Several mills operated for only a few years in the 1900s, including the Odelia Mill (1905–1908) on the Gulf and Interstate Railroad in the Gilbert Woods near Fannett.[47] The Forest Lumber Company and the Industrial Lumber Company also operated a sawmill between 1900 and 1905 north of Beaumont on the Gulf, Beaumont and Kansas City Southern Railway. The town of Helbig developed as a result of the opening of the mill.

The longest-tenured mill opened in Voth (located in present-day Beaumont city limits), south of Pine Island Bayou near the Texas and New Orleans and Gulf, Beaumont and Kansas City Southern railroads, with logs coming from Hardin and Tyler. Lumber baron J. Frank Keith opened the sawmill in 1902. Like many lumber companies operating in East Texas, Keith also built a company town with housing, a company commissary, and a post office.[48] The 1937 description of the town described it as "a typical sawmill town with its uniformly built houses, its general store, and office building."[49] African Americans continued to make up a majority of the workforce at the mills, therefore a Black community with a school developed in Voth. Kirby Lumber Company, which had other mills including several in Beaumont, acquired the property in the 1920s when Keith "had completed cutting all their timber adjacent to the mill and the long rail haul to other available supplies was making logging very expensive."[50] The Kirby Lumber Company had an ample supply of timber, having recently purchased land outside Jefferson County with "two billion feet of standing hardwood timber" that they would transport via rail to the Voth mill.[51] Kirby expanded the mill and, at its peak, produced in excess of 80,000 board feet per day, with much of it going to furniture manufacturers.[52] When it closed in 1952, the mill—the largest inland mill and last mill in operation in the county—had two large sawmills, a band resaw, a planer, dry kilns, a tram railroad, and ancillary buildings including a company commissary and post office (presumably there are remnants of the mill south of Pine Island Bayou off US 287 within present-day Beaumont city limits).

Despite an uptick in activity during World War I, when lumber companies worked with the U. S. government and shipbuilders to build wooden merchant ships, the industry steadily declined over the period, and by 1940 most of the county's mills had closed and/or left Jefferson County. In addition to the railroad, other factors contributed to the industry's decline. The rise of the automobile led to the decline of self-sufficient mill towns like Voth. Able to travel to and from work, millworkers no longer relied on company housing and stores. Due to the impacts of the automobile, combined with union efforts across the South, self-sufficient lumber towns all but disappeared. The depletion of timber was another major contributing factor in the county's declining lumber industry. By 1925, the Texas Almanac reported that "the formerly heavily timbered" northern portion of the county had "been cut away with the exception of along the river bottoms."[53] Conservation efforts, which resulted in the establishment of the Texas Forest Service in 1914, led to some reforestation efforts and contributed to logging changes in the state aimed at protecting the state's timber supply. By 1940, the county again produced some lumber commercially, "from pine, oak, magnolia and cypress, mostly second growth."[54] Even so, by the end of the period, the changes to the industry combined with the economic challenges presented by the Great Depression had all but ended the county's lumber "bonanza" that had started in the 1880s.[55]

## Oil

The discovery of oil at Spindletop in January 1901 was of little surprise, as geologists and oilmen had predicted for decades that the salt domes south of Beaumont contained oil. Though companies drilling in the area in the 1890s found little oil, Anthony Lucas, an expert on salt domes, signed a lease and persisted with help from John Galey and James Guffey, oil men from Pittsburgh, who brought in an experienced drilling team. When they hit oil at a depth of 1,139 feet on January 10, the Lucas geyser blew for nine days, blowing streams of oil over 100 feet tall and at an estimated 100,000 barrels a day, beginning the modern petroleum industry in Texas (Figure 42).[56] Afterward, despite several periods in which oil production declined, in part due to an overabundance of drilling, the petroleum industry remained the leading economic sector in the country throughout the period. With advances in technology that allowed for deeper drilling, the Spindletop oil field produced over 20 million barrels of oil a year at its peak in the late 1920s.[57]

The discovery of oil at Spindletop put eastern Jefferson County at the center of Texas's oil industry and contributed to a period of industrial and urbanized growth. Immediately after the discovery, oil companies, investors, and laborers arrived, adding more than 23,000 people to the population in the decade after the Spindletop discovery. Felt most strongly in Beaumont, the city's population rose from

10,000 to 50,000, and land prices around Spindletop rose more than 100 times their pre-1901 worth.[58] Throughout the period, oil companies built refineries, pipelines, and storage facilities in eastern Jefferson County. The largest companies to arrive in Jefferson County during this period included the Texas Company (Texaco), Gulf Oil Corporation, Magnolia Petroleum Company, and Standard Oil (Exxon). While Beaumont and Port Arthur were home to the majority of refineries and company offices, oil companies also opened refineries in several other eastern Jefferson County cities: the Texas Company opened a refinery in Port Neches in 1906, the Pure Oil Company opened a refinery in Nederland in the 1920s, and Atlantic Petroleum opened a refinery in Groves in 1936 (Figure 43). While the arrival of these companies directly spurred population, urbanization, and industrialization in these communities, they also created and boasted secondary industries, including construction, retail, shipping, and manufacturing. The companies constructed a variety of industrial buildings and structures, as well as offices, such as the Texas Company (Texaco) Mid-County Works Building at 100 Port Neches Atlantic Road (Figure 44).[1]

On a much smaller scale, this trend played out in the rest of Jefferson County, as investors spent millions of dollars hoping to find another Spindletop. As a result, wildcatters discovered several oil fields in Jefferson County during the period, including ones near Fannett in 1927, Nome in 1936, LaBelle in 1937, and China in 1939. Though the amount of oil produced at these fields was less substantial than Spindletop, they impacted surrounding communities which experienced varying degrees of population growth and development.

## The Depression's Impact on Industry

During the Great Depression, Jefferson County was home to one of the country's 35 federal subsistence homestead colonies; six of the 35 were located in Texas, and the others were in Houston, Dalworthington Gardens (Tarrant County), Wichita Falls, Three Rivers (Live Oak County), and Marshall (Harrison County). Though the robust petrochemical industry positioned the county well to weather the Depression, it still suffered from higher levels of unemployment and a slowed-down economy in the early 1930s. The subsistence homestead colony program, initiated under the National Industrial Recovery Act of 1933 and overseen by the Farm Security Administration, served to encourage urban industrial workers to supplement their incomes through agriculture. As part of the program, the federal government developed a 205-acre site between Beaumont and Port Arthur in a predominantly agricultural area (located "between U.S. Highway 69/96/287 and Farm Road 823 six miles southeast of Beaumont").[59] Named Beauxart Gardens, the community consisted of "frame bungalow houses…built in 17 different architectural styles" for 50 families (Figure 45).[60] The community also had two parks, two public roads, and a community center (Figure 46). Each house, purchased for around $3,000 and payable over 40 years, had between 2.5 to 4.5 acres, a combination garage and barn, a chicken house, and garden plot.[61] Beauxart Gardens opened in 1935, and its residents worked part-time at nearby refineries and part-time at the government truck farm at the site. In 1936, the federal government transferred the title for Beauxart Gardens to the Beauxart Homestead Association but continued providing agricultural instruction during the Depression. Today, the street network remains intact, but no houses dating to the 1930s were identified during survey. The subdivision today is filled with houses dating from the 1950s to the 2020s.

## TRANSPORTATION

The early twentieth century was a time of significant growth for the transportation networks in Jefferson County. In 1900, Jefferson County relied heavily on the railroad for transportation, as its waterways had not been deepened, and its road network was limited to less than 300 miles of dirt roads.[62] By 1940, however, the county boasted a deep-water port, over 1,000 miles of road, modern bridges, and its first municipal airport, which opened in Beaumont in 1932. While the county's existing industries served as the impetus for much of this growth, the expanded transportation network served as an economic driver for the county by aiding existing and new industries, ultimately bringing in more people and companies to the county.

### Railroads and Interurban

Jefferson County's railroad network, nearly complete by 1900, was the primary source of transport for the movement of goods and people. Early in the twentieth century, the construction of several additional lines further expanded the network. Spurred by the discovery of oil at Sour Lake in Hardin County, a new line, the Beaumont, Sour Lake, and Western Railway (now operated by Union Pacific), connected the oil field to refineries in Beaumont in 1904. Oil was also the impetus for several Texas and New Orleans Railroad spurs added in the first decade of the twentieth century, with one connecting Nome to Sour Lake in 1903. Another Texas and New Orleans Railroad spur, the Sabine Pass line near Taylor Bayou, connected to downtown Port Arthur by 1908. The rails not only facilitated the movement of goods and people, but they also resulted in new construction in the communities they passed

through. One extant example is the former Southern Pacific Railroad depot built in China around 1905 (Figure 47).

Figure 47. Photo of the former Southern Pacific Railroad depot built in China around 1905. Source: HHM, 2022.

The growing population and commercial activities in eastern Jefferson County saw the completion of an electric interurban line in 1913. With only crude roads between Beaumont and Port Arthur, the Port Arthur-Beaumont Interurban Railway allowed easier commuting between the two cities. The line, which was approximately 20 miles long, also made 10 stops, including in Nederland, between the two cities. The interurban also offered chartered group and excursion trips.

During this period, the railroad played an important part in the development of towns and the oil industry and also allowed sawmills to open closer to the source of lumber. Into the 1920s, the railroad remained one of the primary modes of transportation in the county. However, increased competition from the Neches-Sabine Waterway and the growing reliance on automobiles and highways saw a decline in rail use in the 1930s, reflected in the interurban's last run in 1932.

## Highway and Bridge Building

### Highways

Early in the twentieth century, non-rail and ship travel generally consisted of horses, buggies, poorly drained dirt roads, and ferry crossings. By 1914, though, early road campaigns, led by the county and local municipalities, had expended $400,000 on the construction of 100 miles of mud shell paved highway and 500 miles of graded road.[63] Following this early campaign, the national work of the Good Roads Movement helped bring the first major highway through Jefferson County. The Old Spanish Trail

Highway (OST), a national highway from Florida to California, was completed in the 1920s and entered Texas in Beaumont and traveled west through northern Jefferson County. The route generally followed the alignment of the Texas and New Orleans Railroad and the historic Opelousas Trail. The OST Highway was one of only two automobile routes in Jefferson County identified on a 1917 road map of Texas (Figure 48).

Upon the creation of the Texas Highway Department (THD) in 1917, the OST Highway was designated State Highway (SH) 3. In addition to assuming responsibility for the route, the new department also oversaw the construction of additional highways in the county. While local streets remained under municipal control, the THD, with the support of federal and county monies, led the way in creating new highways including SH 105 to Sour Lake, SH 124 to Hamshire, and SH 87 to the Bolivar Peninsula (see sidebar for more information on the Beach Road) (Figure 49). Major federal highways were also designed in this period, including US 90 (the OST Highway) and US 287/69/96 along the east side of the county. Like the Old Spanish Trail, the new highways generally followed established roadways and rail lines, and many of them intersected in Beaumont.

Figure 48. Inset of a 1917 map showing Jefferson County and its reliance on railroads for most of its transportation: automobile roads in red, railroads in black. The OST Highway cuts through the northern section of the county. Source: The Clason Map Co., Texas, 1917, from Old Highway Maps of Texas, http://www.dfwfreeways.com/old-highway-maps.

The map also highlights how the roads followed rail alignments. Source: Texas State Highway Department, in cooperation with the U.S. Department of Agriculture, Bureau of Public Roads, 1936. Partially revised to February 1, 1940. From the Texas State Library and Archives Commission, https:/www.tsl.texas.gov/apps/arc/maps/maplookup/04906.

**Beach Road**

Beach Road is a historic coastal section of Texas Highway 87 that stretches along the Gulf of Mexico. This historic route was essential to Jefferson County's early development as settlers, Native Americans, tradesmen, cattle farmers, and mail carriers used the route. The route was also used by confederate soldiers during the Civil War. However, by 1920, residents experienced difficulty navigating the stretch of unmaintained road, so by 1923 Commissioner W.A. Vaughan proposed using shell deposits from along the coast to repair the route. This improvement increased traffic to McFaddin Beach and Port Bolivar, causing a business boom for the local economy. In 1931, the Texas Highway Commission named this new roadway a part of state highway 87. The roadway was a popular route to Galveston, but it was also used for coastal defense preparedness during World War II. Hurricanes and tropical storms have since eroded nearby coastline and decimated the roadway, forcing its closure in 1989. Some sections remain in use for local traffic.

The county and county-feeder road system also expanded during this period, aided by the passage of bond issues and overseen by the County Commissioners Court and individual precincts within the county. By 1936, the General Highway Map for Jefferson County shows, in addition to the U.S. and State highways, a network of secondary county and feeder roads crisscrossing all but the southern third of the county. While some of the county roads, including the lone road in the southern third, Beach Road, were subsumed into the State and U.S. Highway system during this period, others remained "unimproved" and "graded and drained" until the post-war period and the establishment of the Texas Farm-to-Market road system.

In addition to benefitting the county's existing businesses, industry, and agriculture, the new highways also contributed to the rise of new businesses and commercial enterprises catering to tourists and automobile travelers. Gas stations, auto dealerships, garages, tourist courts, and motels are just some of the new buildings that became commonplace along the highways. In Jefferson County, while the majority of this type of development occurred in and around Beaumont and Port Arthur in eastern Jefferson County, small communities along the highway in the rest of the county likely saw some increase in commercial development and activity. In the southeastern section, road development attracted visitors to the beach and saw restaurants open at the intersection of several highways in Sabine Pass (Figure 50). A number of the restaurants that opened served seafood caught by local fisherman who kept boats in Sabine Pass and Port Arthur. Bus excursions, including the "beach road bus line" operated by Coastal Coaches, also transported people along the coast between Galveston and Port Arthur.[64] And in Nome, a 1923 travel guide listed several businesses on the OST Highway. Travel guides for Black motorists, including *The Green Book*, listed nearly 80 locations in Jefferson County between the 1930s and 1960s, all in Beaumont and Port Arthur.[65]

Figure 50. Granger's Restaurant (not extant), one of the restaurants in Sabine Pass to open with the expanded road network in the first half of twentieth century. ### Bridges

An integral piece in completing the county's road network was the construction of bridges. During this period, a series of new bridges over the county's waterways replaced crude nineteenth century bridges and ferry crossings, facilitating faster travel. In addition to new bridges over the Neches River, new bridges appeared over Hillebrand Bayou on present-day US 90, Taylor Bayou, and the LNVA canal during this period. The deepening of the Sabine-Neches Canal and the subsequent creation of Pleasure Island also necessitated the construction of a bridge. The first of three bridges built over the Sabine-Neches Canal was completed in 1913. Known as the Pleasure Pier Bridge, it replaced a ferry that had operated between the mainland and the island between 1910 and 1913. Struck by a steamship in 1916, the bridge was replaced with a bascule bridge in 1931 (this bridge was replaced in 1970 by the current Martin Luther King, Jr. Bridge).

The most important bridges constructed during this period spanned the Neches River. In 1925, the Neches River Bridge opened in Beaumont (not extant). Funded by the sale of bonds, the bridge, located on the OST Highway, provided an alternate route across the river than the one provided by Collier's Ferry. A second important crossing across the river opened in 1938. The Port Arthur-Orange Bridge, or the Rainbow Bridge, connects Port Arthur with Orange County along SH 87. Despite the recognized need for a bridge in Port Arthur, created by the growth of the oil industry, the Great Depression and political

and business in-fighting delayed movement on the project. In the meantime, the Dryden Ferry—a substitute for a bridge—proved woefully inadequate for the amount of traffic crossing the river immediately after opening in 1926 (Figure 51). In 1934, Texas Governor Miriam A. Ferguson signed a law allowing the use of county bonds and Federal Public Works Administration funds for construction of the bridge. New Deal relief labor provided construction manpower and the Public Works Administration (PWA), the Texas Highway Department (THD), and Jefferson County, whose voters approved $750,000 for the project, split the cost of construction.[66] Designed by THD engineer G. G. Wickline, the bridge spans 7,742 feet and has a 680-foot horizontal and a 177-foot vertical clearance that ensure a Navy ship with a moored dirigible may pass unimpeded.[67] Upon its completion, the bridge was one of the tallest in the southern United States (Figure 52).

## Waterways

### Sabine-Neches Waterway

After the discovery of oil at Spindletop, urgency in Jefferson County grew for access to a deep-water port along the lower Neches River. The canal dredged in 1899 provided ship access from the Gulf of Mexico to Port Arthur, but the lack of deep-water access along the Neches River kept Beaumont cut off from Sabine Lake and the Gulf. In acknowledgement of the importance of Beaumont and its role in supplying oil to the country, Congress approved funding for a deep-water channel from Sabine Lake to Beaumont and Orange in 1904, and voters in Beaumont approved bond issues for the project. Property owners along Sabine Lake donated land, and the Army Corps of Engineers began work in 1906.[68] The deepened barge canal (the Sabine-Neches Canal) was finished in 1908, but the entirety of the project (named the 25-feet deep Sabine-Neches Waterway) did not reach Beaumont and Orange until 1916. Less than a decade later, in 1925, the waterway was deepened to 30 feet. In addition to deepening the channel, the project also cut off natural bends in the river.

Port Arthur was designated an official U. S. port of entry in 1906, having turned over the canal, a turning basin, and a strip of land along the west side of the canal to the U. S. government. Together with Orange, the region was ranked first among the nation's oil ports shortly after the completion of the Sabine-Neches Waterway.[69] In addition to oil, the ports also shipped rice, lumber, cotton, and other agricultural products. After a steady increase in tonnage, by the late 1930s, the ports handled more than 45,000,000 tons of cargo annually.[70]

### Gulf Intracoastal Waterway

The other significant waterway project completed during this period was the Intracoastal Waterway. Part of a larger system connecting ports from Brownsville, Texas to Florida, the Gulf Intracoastal Waterway through Jefferson County was finished in 1933. The idea for the waterway dated back to the nineteenth century, but due to factors including wars and competition from the railroads, the project was never completed. After the discovery of oil at Spindletop and the subsequent growth in the petrochemical industry along the Texas coast, the project came to life. Financed by the U. S. government and constructed by the U. S. Army Corps of Engineers, the Gulf Intracoastal Waterway was finished to Brownsville in 1949. Used primarily by barges for the transport of oil and petrochemical products, the waterway also handles a variety of manufactured and agricultural products.

In Jefferson County, the channel cut through the southern marshlands, connecting the Sabine-Neches Canal in Port Arthur to Galveston Bay. Paralleling the coast, the approximately 12-feet deep and 125-feet wide channel is between 3 to 9 miles from the coast. By cutting and separating properties in two, the project had significant impacts on property owners and the ecology of the marshes. As discussed in the cattle section, ranchers changed their grazing practices, and some inland lakes were lost due to refuse from dredging the channel. Additionally, the channel cut off fresh water provided by some of the lakes on the separated piece of land to the south, allowing saltwater to invade the upper marshes.[71] Because the fresh water was critical to rice farmers and ranchers, some built levees, dams, and pumping stations in order to access water.[72] In doing so, new ponds and lakes were created, including Big Hill Reservoir, Boggy Slough, and Monteaux Pond.[73]

## LAND-USE PATTERNS AND COMMUNITY DEVELOPMENT TRENDS

### Eastern Jefferson County

Eastern Jefferson County remained the most populated and urbanized part of the county, home to most of the county's industry and its largest cities, Beaumont and Port Arthur. Home to between 58 to 81 percent of the county's population between 1900 and 1940, Beaumont and Port Arthur were the only two cities in the county with more than 3,000 residents by 1940 (as shown in Table 6). Beaumont remained the commercial, entertainment, and government center of the county, experiencing a commercial, residential, and industrial boom that saw its downtown fill in and residential areas added. In response to Jefferson County's growth, the county replaced the 1893 county courthouse in Beaumont with its current one in 1931. (See the sidebar on the history of the Jefferson County Courthouse). Port Arthur experienced similar growth and, in 1936, a new County Building, funded in part with PWA funds, opened to meet the needs of the county (Figure 53).

*Table 6. Population growth in Jefferson County's most populous cities. Source: U. S. Census Bureau, 1900–1940, https://www.census.gov/.*

| Year | Beaumont | Port Arthur | Sabine Pass | Port Neches |

Built in 1936 through the PWA, the completion of the building reflects the growth of the county, particularly southeastern Jefferson County, as a result of the petrochemical industry. The building is an RTHL and also a contributing building in the NRHP-listed Port Arthur Downtown Historic District. Source: HHM & Associates, Inc., 2018.

**The Jefferson County Courthouse**

The current Jefferson County Courthouse in Beaumont is the fourth building erected to represent the justice system for the county. The first county building, which appeared in 1838, was a wooden structure that was also used as a jailhouse.[74] After the first building burned in 1844, a second two-story Greek Revival building surrounded by a picket fence replaced it in 1854. In addition to its governmental role, the building was also used by Baptist and Methodist congregations for worship services, and it was also leased to a Confederate surgeon who used it as a hospital during the Civil War.[75] In 1893, twelve years after the incorporation of Beaumont, another courthouse was constructed. The three-story, red brick Italianate building with white trim was designed by Eugene Thomas Heiner at a cost of $39,000.[76] The current high-rise brick courthouse was constructed in 1931, following the oil boom and subsequent population growth of the early twentieth century. Local architects Fred C. Stone and A. Babin designed the fourteen-story building in the Art Deco style, implementing sculpted ornamentation and marble interior work to create a unique Texas government landmark (Figure 54). Details include and celebrate county life through carved limestone vignettes of lumbermen, farmers, oilmen, and cowboys at work.[77] This fourth and final Jefferson County courthouse cost $1,000,000. The building's high-rise form and Art Deco style are unique in Texas courthouse design, and they serve as reflections of the county's mid-century prosperity. The courthouse is a Recorded Texas Historic Landmark (RTHL) and is listed in the National Register of Historic Places.

Figure 54. The current Jefferson County Courthouse in Beaumont, built in 1931, was designed by Fred Stone and A. Babin. The Art Deco courthouse is listed in the NRHP. Photo from 1979. Communities established in the late nineteenth century near Beaumont and Port Arthur benefitted from the proximity to the two cities, as well as to the oil fields and the Neches River. Among these cities, Nederland and Port Neches, the county's third and fourth largest cities, both experienced growth in the twentieth century. In addition to the oil jobs associated with the nearby Spindletop oil wells, Nederland's other source of economic income until the 1920s was related to agriculture, particularly its dairy farms. Connected to Port Arthur and Beaumont by the interurban line in 1913, the city boasted a population around 1,600 by the early 1920s. It had a small commercial center along Boston Avenue, as well as an independent school district with 256 White students, and several churches.[78] In line with nationwide trends of suburbanization and increased automobile ownership, new residential areas, including the Hillcrest Subdivision, opened south of downtown, reflecting Nederland's growth, with over 50 new houses built in just two years in the early 1920s (Figure 55).[79] The extant houses in Hillcrest from this era—bungalows constructed in styles including Craftsman and Tudor Revival—are representative examples of the types of houses constructed in this period in communities across Jefferson County (Figure 56).

# TYRRELL-COMBEST REALTY COMPANY

## REALTORS

**Beaumont** ⁘ ⁘ ⁘ ⁘ **Port Arthur**

Figure 55. A 1923 advertisement for lots in the new Hillcrest subdivision in Nederland. Founded as an agricultural community, Nederland experienced growth in the early twentieth century due to the petrochemical industry and the opening of a refinery in 1922. Source: *Beaumont Enterprise*, August 19, 1923, 13.

Figure 56. Photo of 2304 Avenue B in Nederland. The bungalow constructed in the Craftsman style is just one example of the types of houses constructed in the 1920s in communities across Jefferson County. Source: HHM, 2022.

Much of the early 1920s growth was in anticipation of the opening of Humphrey Oil Company refinery at Smith's Bluff northeast of downtown. The company itself constructed bunk houses in Nederland for around 600 men – both construction workers at the refinery and refinery workers.[80] Upon its opening in 1922, the refinery (taken over by Pure Oil in 1923 and currently the Phillips 66 Terminal) spurred additional growth in Nederland throughout the pre-war period. By 1940, the year of incorporation, Nederland boasted several thousand people. Keeping up with its population, Boston Avenue added several more stores and a theater, and the residential areas slowly added more residences (Figure 57). In 1932, the local library moved out of a former dry-cleaner's building and into a new building at Boston Avenue and 10th Street (not extant).[81] The library, part of the Jefferson County Library system that organized in 1929, served both Nederland and Port Neches and was a stop on the county's bookmobile route beginning in the 1930s (Figure 58). The school district also built a new high school on South 12th Street in 1924, adding a gym in 1928 on South 12th Street (neither extant), and a new elementary school, Langham Elementary School (extant), at 800 South 12th Street, in 1940 (Figure 59).[82]

In Port Neches, early growth stemmed from the Spindletop oil wells and the subsequent opening of the asphalt plant in 1901. The town, founded as Grigsby's Bluff in the nineteenth century, was laid out a year after the plant's opening in 1902, located along the Kansas City Southern Railway. Spurred by the oil industry, the city's population grew to 600 by 1915 and to nearly 3,000 by 1940.[83] When the Texas Company took over the plant in 1906 to use as a refinery, an influx of Cajuns arrived, settling in small clusters near the refinery dubbed "Little Maurice" and "Petite Abbeville."[84] Extant clusters of housing from the early to mid-twentieth century near the plant are found along Pine Street, east of the former

plant, and in the Rachford and Dearing subdivision to the west. Commercial activity first centered along Avenue A (now Grisby Street) and then migrated to Port Neches Avenue by the 1920s, where masonry buildings lined the street (Figure 60). Businesses included a drug store; mercantile and dry goods store; hardware, furniture, and sporting goods store; a bank; clothing store; and a theater.[85] The two-part commercial block building at 1117 Port Neches Avenue is representative of the type of commercial building constructed in this period (Figure 61). Residential development occurred in new additions north and south of Port Neches Avenue and east of the refinery (Figure 62). In 1927, the town officially incorporated. [86] Port Neches boasted a public park, several churches, and several newly constructed schools, including what was said to be the first modern school building in the county—Port Neches High School—during the period to keep up with the growing population (not extant).[87]

Figure 57. 1938 aerial image of Nederland. Note the edge of the refinery to the north, and Port Arthur (in orange) to the southeast. Residential development had spread from downtown, though the city remained confined to a small area during the period. Source: Texas General Land Office, 1938 image, via Google Earth.

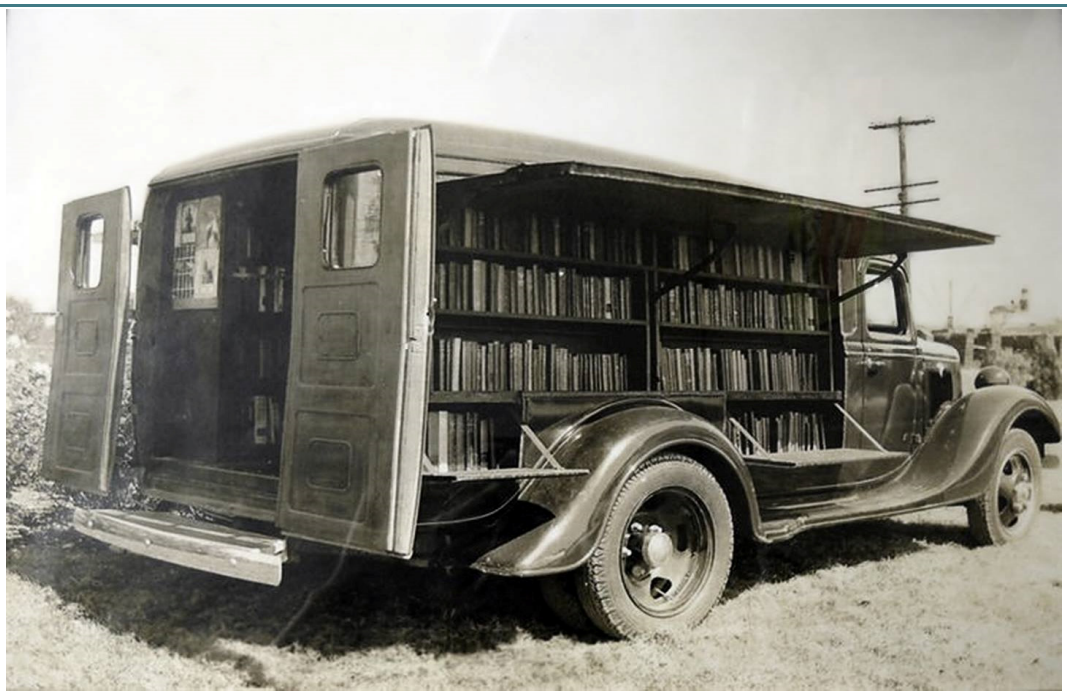

Figure 58. Stemming from the Progressive Era and pushed by women's clubs, bookmobiles first began in the U. S. in the nineteenth century but grew more common in the early twentieth century and expanded during the Great Depression due to WPA library expansion efforts. In Texas, the Texas Federation of Women's Clubs advocated for bookmobiles and helped usher in legislation that established traveling libraries in the state. Jefferson County boasted the first bookmobile in the state when the Tyrrell Public Library initiated service in 1930. This truck, purchased in 1935 and replaced in 1948, traveled to libraries and schools in eastern Jefferson County. By the postwar period, the bookmobile traveled across the county. The bookmobile operated until 2010. Source: Traces of Texas, Facebook page, accessed December 3, 2021, https://www.facebook.com/TracesofTexas/photos/a.162532927112178/1078850065480455/.

Figure 62. 1938 aerial image of Port Neches. Much of the city's growth in the early twentieth century stemmed from the area refineries. Source: Texas General Land Office, 1938 image, via Google Earth.

New population nodes also developed in eastern Jefferson County, spurred by the railroad and oil industry. The towns of Guffey (continued as a community during periods of oil prosperity but was largely abandoned by the 1970s), Groves, Port Acres (annexed by Port Arthur in the 1960s), Pear Ridge (annexed by Port Arthur in 1980s), and Griffing Park (annexed in 1983 by Port Arthur) were laid out

along rail lines, including the Kansas City Southern Railway and the Beaumont-Port Arthur interurban line, in the 1900s and 1910s. Central Gardens, six miles southeast of Beaumont on the Kansas City Southern Railway, was founded later, around 1930, as a result of the growing oil and petrochemical industries in the area.[88] Largely comprised of oil men and refinery workers, these communities experienced modest growth during the period but never grew to more than 1,900 people prior to the war. Among the fastest growing of these towns was Groves. Just northeast of Port Arthur, Groves, known for the hundreds of pecan trees planted there in the 1910s, was acquired by the Port Arthur Land and Development Company around 1920. Developed as a stop on the Kansas City Southern Railway, the town added a post office in 1927, a school in 1929, and a library on Lincoln Avenue in 1934.[89] A commercial node developed along Jefferson Street and Lincoln Avenue. In 1936, the Atlantic Refinery opened in Groves, boosting its growth.[90]

Similar to most of the new residential construction across the nation, Federal Housing Administration (FHA) loans made many of Jefferson County's new developments possible. These low-cost mortgages typically had stipulations for home siting, lot uniformity, setbacks, and street widths. In addition to uniformity within subdivisions, these loans contributed to racial segregation and housing inequality. FHA loans favored single-family suburban development over home improvements for extant houses, and the program overwhelmingly extended loans to White families over non-White families. While racial housing inequity was most prevalent in housing practices in Beaumont and Port Arthur, where the majority of the county's Black population lived and the Home Owners' Loan Corporation (HOLC) created redlining maps, other communities were not immune to the systemic racism that was prevalent across the country (Figures 63, 64). Though these newly developed residential areas were predominantly White, developers likely used deed restrictions to ensure non-White families were not allowed to move into certain parts of these communities.

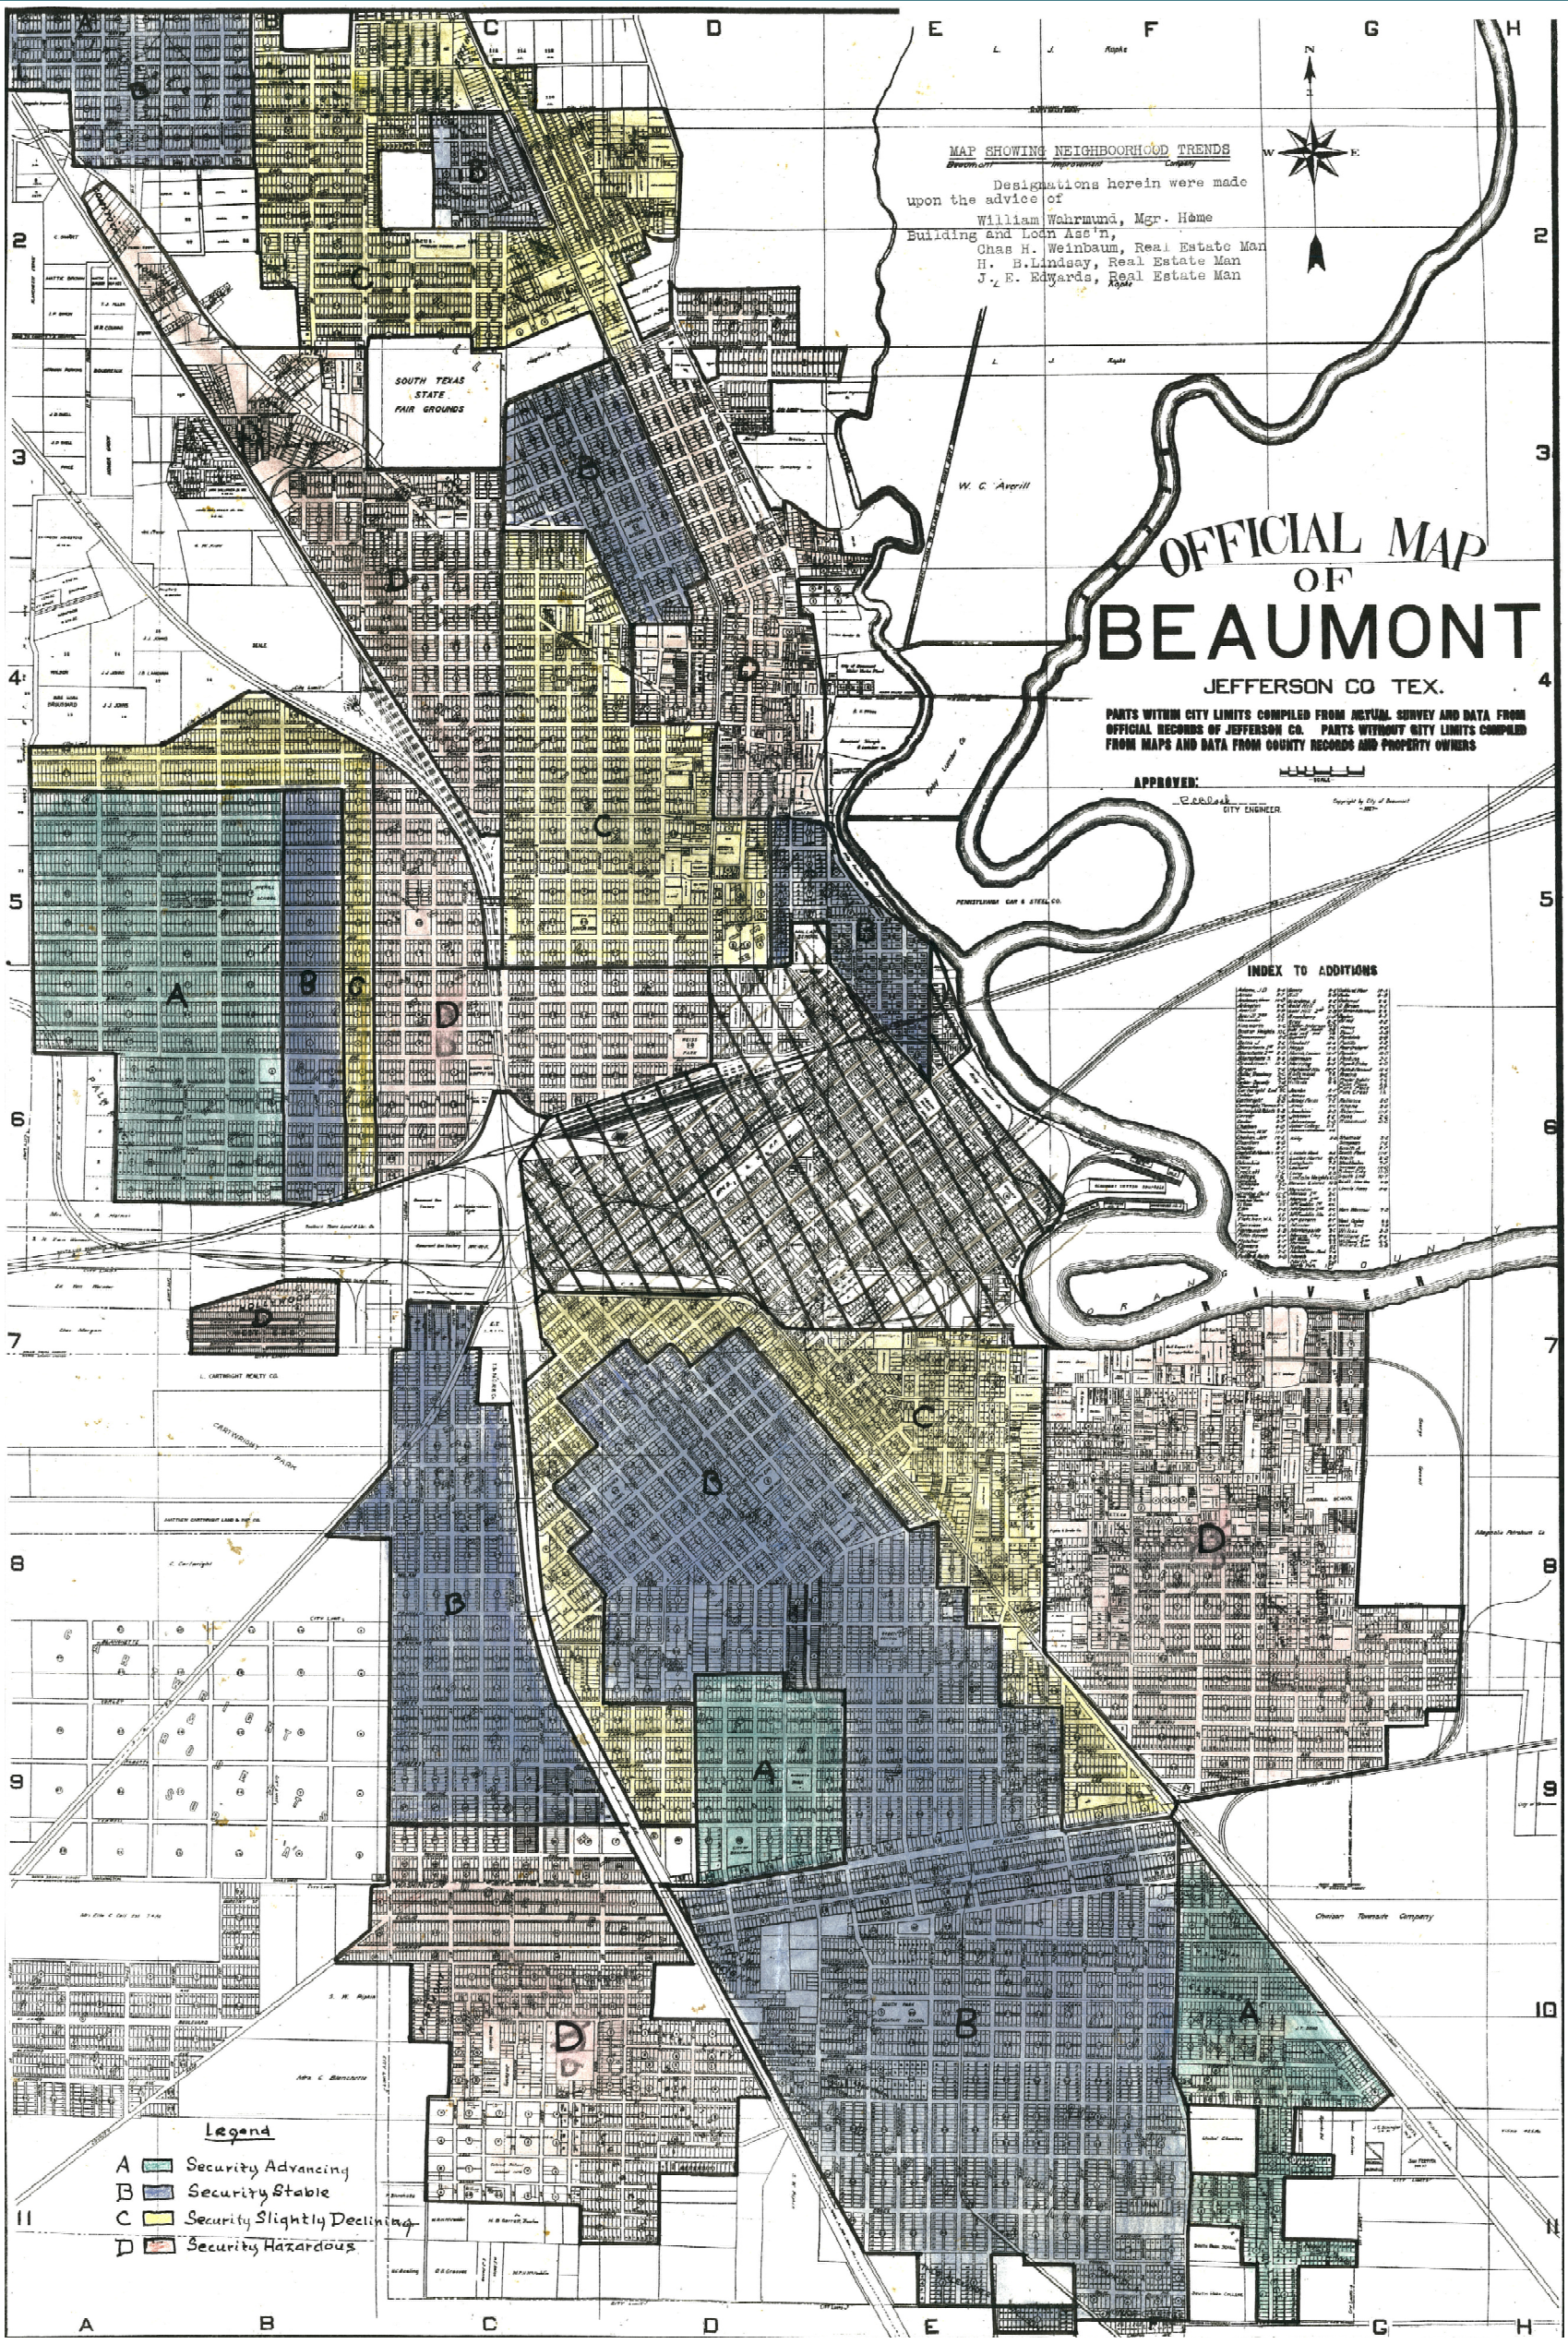

Figure 63. HOLC (redlining) map for Beaumont. Areas in yellow and red highlighted where FHA loans should not be issued. These areas typically included industrial areas and racial and ethnic minority neighborhoods. Source: Robert K. Nelson, LaDale Winling, Richard Marciano, Nathan Connolly, et at., "Mapping Inequality," American Panorama, ed. Robert K. Nelson and Edward L. Ayers, accessed June 9, 2021, https://dsl.richmond.edu/panorama/redlining/map/TX/Beaumont/areas#loc=14/30.0729/-94.1079.

## Central, Southern, Northern, and Western Jefferson County

Further removed from Beaumont and Port Arthur, the area remained characteristically rural throughout the period, home to mostly farmers and ranchers. The small population nodes that did develop lay along the railroads, close to rail stations used for agriculture and the lumber industry. These new nodes—typically comprised of fewer than several hundred people—developed in north, northwest, southeast, southwest, west, and central Jefferson County.

North of Beaumont, the lumber industry spurred the creation of new towns on and near the railroad. Both Helbig (founded 1900, on the Gulf, Beaumont and Kansas City Southern Railway) and Voth (founded around 1902, near the Texas and New Orleans Railroad and the GB & KC Railway) developed because of the sawmills located there: the Forest Lumber Company in Helbig and the Keith Lumber Company in Voth. While the sawmill company left Helbig in 1905, a small residential community remained and slowly grew. In Voth, the population reached an estimated high of around 750 in the mid-1920s. Among its residents were African American and Mexican sawmill workers.[91] In the post-war period, Beaumont annexed both communities.

In much of the rest of the county, communities developed in support of farmers and ranchers. New towns from the period include China (founded 1900, along the Texas and New Orleans railroad), Meeker (founded around 1904, on the Beaumont, Sour Lake and Western Railway), Cheek (founded in 1906, on the Gulf and Interstate Railway), and Big Hill (founded in 1909, not on a railroad). Both China and Cheek were largely inhabited by rice farmers. In Cheek, per current residents, an African-American community developed, particularly along Lawhon and Boyt roads. Though still predominantly African American, Cheek retains few early twentieth-century resources associated with the community's development. Among the extant resources from this period include a single-family residence built around 1915 per its current owner (Figure 65). In Big Hill, settlers included Swedish-American fig and citrus farmers from the Midwest.[92] Big Hill is the only community that did not survive the period. After a hurricane in 1915 destroyed houses, barns, and orchards, many in the community relocated to Hamshire and Winnie in Chambers County.[93]

Established communities, including Nome, Fannett, and Hamshire, all founded in the late nineteenth century as stops on the railroads, also experienced some growth. Early on, Nome benefitted from the influx of people in Hardin County after the discovery of oil at Sour Lake around 1900. Throughout the period, though, Nome, as well as Fannett, prospered as a result of the area's increased agriculture, in part due to the expanded and improved irrigation and drainage network. Hamshire, though platted and subdivided in 1911, did not experience much growth until the late 1920s with the discovery of the Fannett oil field. A similar trend played out in many of Jefferson County's rural communities of the late nineteenth and early twentieth centuries. Despite experiencing some early growth, many communities experienced slowed or decreased growth, until the discovery of new oil fields in and adjacent to the county in the late 1920s, 1930s, and 1940s. New oil fields at Fannett (1927), Nome (1936), LaBelle (1937), and South China (1939) during the period all contributed to an influx of new residents in nearby communities.

Throughout the period, development in these rural communities was minimal, stretching from one to several streets off the rail (Figures 66-68). Some of the first buildings were train depots, like the one in China, and post offices, but most of them lost their post offices in the early twentieth century. Commercial and industrial development was confined to the larger communities (including China, Nome, and Hamshire) and typically consisted of warehouses, a store, and in Hamshire's case, a canning factory (not extant). Nome in the early 1900s also boasted a hotel with a restaurant across from its depot.[94] The completion of highways in the 1920s and 1930s spurred some additional commercial activity, at least in Nome, which listed a general store, a garage and a tourist court, Oak Grove (not extant), in a 1923 OST Highway travelers' guide (Figure 69). Some communities also had one or more

churches, including China, which boasted three in the late 1930s. At least one church, Our Lady of Sorrow Catholic parish built in 1935, remains [245 US 90].[95]

Figure 65. Photo of a single-family residence built in Cheek around 1915. Source: HHM, 2022.

A number of rural communities also boasted schools early in this period. Though public education was established in the late nineteenth century, the passage of a several laws at the state level in the early twentieth century aided education efforts for much of Jefferson County by establishing county boards of education and expanding aid to rural schools.[96] By 1920, as reported in the *1921 School Review of Jefferson County*, the county had more than 10 public school districts and more than 20 schools, 6 of which provided teacherages.[97] Outside of current boundaries of Beaumont and Port Arthur (which each had a high school and elementary schools), and excluding Port Neches and Nederland, Jefferson County boasted schools in Nome, China, Meeker, Fannett, LaBelle, Cheek, and Hamshire. Additionally, the county had one school in a rural area outside of Hamshire named New Holland School. In 1924, several of the smaller, one-teacher schools closed, as the trend of district and school consolidating began.[98]

A reflection of the communities to which they belonged, many of the schools had classes on farming in addition to the required lessons. In China, for example, "boys and girls born and bred on the farm are taught practical agriculture in connection with their other studies."[99] The school property contained, in addition to the school building, a barn with a blacksmith shop and a field where male students grew crops. The girls, who were taught sewing and cooking, also learned poultry husbandry.[100] The rural schools also played a role in the life of the community, providing spaces for entertainment and social functions, as well as playgrounds and sports fields. In Fannett, fundraisers and gatherings at the school

raised money for a "handsome Grafanola [phonograph]…for the entertainment of the gatherings" and music class.[101] In China, the school also offered night classes to the "farmers of French descent" who did not speak English."[102]

The student bodies at each of these schools also reflected their community demographics. While White and Black students did not attend classes together, Black children in these rural areas received educations in separate buildings, according to the 1937 School Adequacy Book (Figure 70). While White children accounted for the majority of the student body, Black students made up between 3.3 percent (in LaBelle) and 42 percent (in Cheek) of the student body in these rural schools in 1921. The Nome School and China School each had one Black teacher.[103] The 1937 School Adequacy book shows that the communities of Nome, China, Cheek, Hamshire/New Holland, and possibly LaBelle all had Black schools. Additionally, Beaumont and Port Arthur had all-Black schools, including two Rosenwald Schools.

Many of the rural schools, which organized in the early twentieth century, built small wood-frame school buildings, aided by the increase in funds from the state. At least one of these school buildings, the old La Belle School, remains, having been moved to its current location at 12542 LaBelle Road after it closed (Figure 71). Reflecting their larger student bodies and the prosperity of their communities, Nome and China built larger masonry buildings. While many of these early school buildings are no longer extant, one school building built around 1920 and associated with the China School remains at 717 N. Broadway Street (Figures 72-73). (In 1937, Nome added a separate school gymnasium with a basketball court and a 400-seat capacity, paid entirely with funds from the local maintenance fund (Figure 74)).[104] Built at 1675 Texas Street (extant), the building cost $12,000 and was considered "one of the most complete small structures of its kind available to a school the size of Nome [110 students] in this section."[105] As schools began consolidating in the mid-1920s, smaller schools were sold and larger new schools were built. In Fannett, where the district assumed the LaBelle and Burrell Schools, a new, larger building opened in 1924 (not extant).[106] During the Depression, New Deal programs aided some of these smaller rural schools. In Fannett, the National Youth Administration (NYA) helped build a vocational and manual arts classroom and workshop in 1938 (not extant).[107] In Cheek, the PWA helped build a new school in 1939 (not extant).[108]

## Parks and Open Space

During this period, public park creation was generally confined to the larger cities of Beaumont and Port Arthur. One of the few public parks created outside Beaumont and Port Arthur was Port Neches Park in Port Neches sometime around 1920. In Sabine Pass, the state erected the Dick Dowling statue in what is now Sabine Pass Battleground Park as part of the 1936 State Centennial Celebration (Figure 75).

**Tyrrell Park, Beaumont**

The majority of New Deal programs and projects in Jefferson County fell within Beaumont and Port Arthur. Among the projects funded by New Deal programs was a WPA public swimming pool at Alice Keith Park (only entrance remains) in Beaumont, the County Building in Port Arthur (extant), the Beaumont Municipal Airport (original terminal replaced), and the Rainbow Bridge (extant). Another project was the development of Tyrrell Park. Between 1935 and 1941, more than a decade after local philanthropist W. C. Tyrrell donated roughly 1,500 acres in southwest Beaumont for the creation of a city park, the Civilian Conservation Corps built drainage ditches, roads, nature trails, picnic tables, a horse stable, recreation building, and an entrance portal.[109] The public park was the largest in the county, and it also contained the county's first municipal golf course—the first private club (Beaumont Country Club) opened in 1906—also built by the CCC.[110] Many of the CCC improvements remain but have been badly damaged by hurricanes over the years (Figure 76).

Despite the lack of public parks outside Beaumont and Port Arthur, Jefferson County had an abundance of open land that residents used recreationally. The expanded road network, particularly the completion of Beach Road, made the southern section of the county and the publicly owned beach land more accessible (Figure 77). A 1924 *Port Arthur News* article reported that a refinery workers' picnic had attracted "the greatest crowd in history," with around 25,000 people enjoying swimming, dancing, games, and fireworks.[111] Without fences or cattle guards across the road, though, beachgoers sometimes had to share the space with cattle that roamed over from the ranch lands to the north.

The privately owned southern marshlands, visited by waterfowl and muskrat hunters and fishermen since the nineteenth century, also grew in popularity among outdoorspeople. Rather than coordinating with private property owners individually, as was the situation in past periods, hunting and sportsmen clubs organized and leased land from the property owners for recreational use. Some of the first clubs in the county formed in the early 1900s, hunting at Keith Lake and at John Gate's Lost Lake Preserve.[112] Some private clubs, including the Millionaire Sportsmen's Club—comprised of prominent local businessmen—had clubhouses in Port Arthur, while others built clubhouses and camps in the marshes, along the roads—Clam Lake Road and Beach Road—and along the Intracoastal Canal (Figure 78). By the 1930s, shacks, camps, and lodges dotted the southern marshes, with around 50 camps on Big Hill Bayou alone.[113]

**Port Arthur Hunting Club**

Among the largest and most prominent private clubs in the county was the Port Arthur Hunting Club. Established in 1926, the club counted some of the county's most prominent local oilmen and business owners as members. Founded by Henry Joseph LeBlanc, who also founded the Standard Brass Manufacturing Company in Port Arthur, the club leased between 30,000 and 40,000 acres of land on the McFaddin Ranch.[114] Wanting a place to take visiting executives and clients on hunting, fishing, and boating trips, LeBlanc coordinated with McFaddin for a lease. McFaddin agreed in the hopes that it would curtail trespassing on his property. The club set up driftwood camps with corrugated tin roofs on the beach dunes. In the early 1930s, LeBlanc built Breeze Inn, a building atop pilings with a bar, dance floor, and kitchen as an escape from the mosquitoes and weather (Figure 79).[115] During World War II, the U. S. government used the building as a patrol station. For a short period of time, the club used a yacht as its clubhouse before the Standard Brass Camp was built on the south side of the Intracoastal Canal. Like most of the camps in Jefferson County, both the Breeze Inn and the Standard Brass Camp were destroyed by hurricanes.

In addition to the private clubs, property owners also offered guided hunts and day passes for hunting and fishing. One of the first day hunting operations opened in the 1920s at Pipkin's Hunting Ranch – 18,000 acres of fresh and salt wetlands, prairie, and rice fields near Big Hill and Star Lake (Figure 80).[116] Another popular day hunting operation opened near Sea Rim Marsh. Named Sea Rim Hunting Club by the 1930s, the operation had been so popular in the 1920s that for a short period of time (before the sheriff intervened), an enterprising man collected tolls at a gate he erected on the road to the ranch.[117] At the McFaddin Ranch, owner W. P. H. McFaddin commercialized muskrat trapping on the property, holding a yearly auction at warehouses he built on the ranch for fur trappers to sell their goods.[118]The sporting culture associated with these lands became an important part of Jefferson County and one that would play a role in the next period during the creation of refuges and state parks.

Figure 75. As part of the Texas Centennial Celebration, the monument to Dick Dowling (sculpture not shown in photo) was erected in Sabine Pass at the intersection of SH 87 and Broadway Street. This photo, from the 1950s, shows it dismantled in preparation for its relocation to its current location at the Sabine Pass Battleground State Historic Site. # WORLD WAR II: 1941–1945

World War II ushered in a period of intense industrialization. Existing industries expanded and new ones emerged in response to the country's wartime needs. As a result of the rapid industrialization and the loss of labor due to the war, an influx of new workers settled in the county. The population increase was not without growing pains, and Jefferson County was forced to deal with that fallout. The war also impacted agriculture in the county, though the arrival of thousands of prisoners of war (POW) helped make up for the loss of farm and ranch hands due to the war. Lastly, the county's wartime maritime heritage played a role in coastal defense during the war.

## IMPACT ON INDUSTRY

During the war, Jefferson County experienced rapid industrialization that saw existing industries expand and new ones emerge. The oil industry remained the economic backbone of Jefferson County during the period, and wartime oil and gas demands saw drilling increase and the county's refineries—in Beaumont, Nederland, Port Arthur, and Port Neches—increase production. No new refineries opened during the war, but the county's seven refineries expanded production by two million barrels and added more than 6,500 more workers.[1] In addition to oil, a related new product—synthetic rubber—became an important wartime commodity, and several new plants in Jefferson County helped the country meet its rubber demands. Lastly, one of the county's oldest industries, shipbuilding, added around 8,500 workers to its rolls during the period, necessitated by the country's need for wartime ships.[2] These three industries—oil, synthetic rubber, and shipbuilding—not only employed the most people in Jefferson County during the war, but their products also played a critical role in the U. S. military victory.

### Rubber

Used by the military for truck and plane tires, rubber was an important commodity during World War II. Cut off in the early 1940s from East India, which provided around 97 percent of the country's rubber, the U. S. government took steps to manufacture and stockpile its own rubber.[3] Under the auspices of the Rubber Reserve Company and Defense Plant Corporation, the government ordered the country's four largest rubber companies—Goodyear, Firestone, B. F. Goodrich, and the United States Rubber Company—to construct and operate new synthetic rubber plants. With its "huge and dominating oil supply and refining business" Texas was the ideal location for rubber plants. As a result, between 1940 and 1944, around 15 new plants opened across the state in oil and natural gas rich regions, and by 1950 the state produced more than 50 percent of the country's synthetic rubber.[4]

In Jefferson County, Port Neches became known as the "Synthetic Rubber Capital of the World" during the war.[5] In addition to the county's established petroleum industry, the city's location on the Neches River and proximity to the Gulf of Mexico attracted several rubber companies to Port Neches. Between 1942 and 1944, the U. S. government and private companies coordinated and built several plants on undeveloped land in Port Neches, employing as many as 15,000 construction workers (located east of downtown on the remains of the C. O. Baird land, roughly situated between Main Street and SH 136).[6] In 1942, the United States Rubber Company (still in operation as Lion Elastomers) began producing emulsion styrene butadiene, a synthetic rubber, at its new Port Neches plant at 1615 Main Street. Neches Butane Products Company (under current operation as TPC Group) also built a plant in Port Neches. Formed by five oil companies in 1942, NBPC produced butadiene, a critical component in synthetic rubber produced from petroleum. When completed in 1944, the NBPC complex was the largest butadiene plant in the world.[7] The plant occupied 485 acres and consisted of 23 buildings, pressure vessels, reactors, furnaces, tanks, and 48 17-story steel butadiene towers (Figure 81, located south of downtown).[8] During the war, the plant was the largest producer of butadiene in the world. The plant remained in operation until 2019 when 6,000 gallons of butadiene leaked, causing an explosion

that destroyed the plant. The government also helped fund the construction of the B. F. Goodrich Company and the Firestone Tire and Rubber Company plants on 124 acres of undeveloped land. When the Goodrich plant opened in February 1944, it was the world's largest petroleum-derived butadiene rubber plant and employed 8,000 workers (Figure 82).[9] By late 1944, the government began selling some of its industrial plants, including some of the rubber plants in Port Neches which were purchased by the private companies operating them.[10] This trend continued into the 1950s until all the plants were privately owned.

## Shipbuilding

Southeast Texas's and Jefferson County's abundance of yellow pine—a suitable material for ship construction—sawmills, and various waterways predisposed the region to shipbuilding. Beginning in the nineteenth century, Jefferson County's history of shipbuilding, like the rest of Southeast Texas's, experienced periods of diminished activity and growth, particularly during periods of conflict, such as the Civil War and World War I. Slowed by the Great Depression, the industry rebounded on the eve of World War II.

In preparation for war, the federal government financed shipyard expansion through the Merchant Marine Act of 1936. Across Southeast Texas, existing companies expanded their yards, while new companies established themselves in the region. Between 1937 and 1940, the number of shipbuilding companies in Texas increased from 7 to 10.[11] Of the 10 shipbuilding companies in the state, Jefferson County claimed two: the Neches Shipyard in Beaumont and the Pennsylvania Shipyard in Beaumont.[12] By 1945, a third, the Samuelson Shipyard, was also building ships in Beaumont. In addition to shipyard expansion, the Neches River ship channel was also deepened and extended to the Pennsylvania Shipyard on Island Park in the late 1930s in preparation for war. By 1939, the Pennsylvania Shipyard began building simple cargo ships for transporting troops and materials overseas under the federal government's Emergency Shipbuilding Program.

Shipyard expansion continued during the war under President Roosevelt's shipbuilding program, with local shipyards getting lucrative contracts from the government. New shipbuilding technology and techniques—with welding replacing riveting—also increased shipbuilding production, though they required new equipment and skilled welders. In addition to installing new mass production equipment, some companies offered on-the-job training.[13] Throughout the war, the shipyards in Beaumont produced over 100 minesweepers, cargo ships, tugs, and barges for the federal government.

Throughout the war, the shipyards in Jefferson County employed around 9,000 people and still, in early 1942, companies enacted two 10-hour daily shifts to keep up with demand (Figure 83).[14] The labor shortage caused by war and the wartime demand also saw women employed and trained as welders at the shipyards (Figure 84).

Figure 83. Scene of the Pennsylvania Shipyard in Beaumont in 1943 during World War II. Even though Black laborers experienced some economic advancements during the war due to the labor shortage, note that the White and Black workers are still separated as they leave their shifts. Figure 84. Women were also trained to take on jobs due to the labor shortage. Here is a woman welding at the Pennsylvania Shipyard in Beaumont in 1943. Source: John Vachon, May 1943, Library of Congress, https://www.loc.gov/item/2017856282/.

# SOCIAL IMPACTS OF EXPANDED INDUSTRY

## Population Growth: Influx of Laborers and Impacts

Expanded industrial production and economic development in Jefferson County contributed to a rise in population during the war. The economic climate combined with the loss of labor due to fighting abroad created a void that was filled by an influx of new workers, attracted by on-the-job training and good pay offered by many companies. Between 1941 and 1948, Jefferson County added over 56,000 new residents.[15] A large number of laborers came from Louisiana and many of the Cajun and Creole laborers remained in Jefferson County after the war. So many Louisiana migrants settled in Port Arthur that it became known as the Texas capital of Louisiana.[16] Black laborers also came to Jefferson County in droves during the war. Between 1940 and 1950, the county's Black population increased by more than 200 percent. Accounting for 11 percent of the county's population in 1940, by 1950 Black residents made up 23 percent of the total population in Jefferson County.[17]

### HOUSING SHORTAGES

One of the consequences of the county's rapid population growth was a housing shortage. Since most of the jobs were located in Beaumont, Port Arthur, Port Neches, and nearby Orange in Orange County, the majority of the new residents settled in eastern Jefferson County, in and around its largest cities (Table 7). As early as December 1941, Beaumont reported a housing shortage, with only "11 vacant houses, 27 apartments, and 218 rooms available for rent in the city."[18] The shortage worsened as the U. S. entered the war, and reports of housing shortages in Beaumont, Port Arthur, and Port Neches littered the local newspapers throughout the war. While some defense workers slept in their cars, others moved outside of town and commuted to work daily.[19] Cities encouraged homeowners to open their unoccupied rooms to renters, and the National Housing Agency sent hundreds of trailers to house workers.[20] In Port Neches, the government set up trailers across from Port Neches Park.[21] Despite the federal government's rationing of commodities, including some construction material, through its War Production Board the government funded and allowed some construction projects to help alleviate the county's shortage.

*Table 7. Table showing population growth during World War II in the county's most populous cities.*

| Year | Beaumont | Port Arthur | Port Neches | County Total |
|---|---|---|---|---|
| **1940** | 59,061 | 46,140 | 2,487 | 145,329 |
| **1950** | 94,014 | 57,530 | 5,448 | 195,083 |

The U. S. Maritime Commission (USMC) backed two of the largest wartime construction projects. The first, Multimax Village off Gulf Street in north Beaumont, opened in 1942. Designed by Federal Public Housing Administration architects, David Williams, Roy A. Worden, Karl R. Schwarz, and William P. Jones, the complex was designed to "free the housewife for war work" and used a minimal amount of materials.[22] The complex, a blueprint for other war workers' housing, cost around $1,500,000 and provided 600 rental units for defense workers (Figure 85).[23] One year later, the USMC completed a second 600-unit complex next to Multimax Village. The 81 two-story buildings and 31 one-story buildings, designed by Beaumont architectural firms Stone and Pitts and Steinman and Goldman, housed workers from the Pennsylvania Shipyard.[24] In 1956, the City of Beaumont demolished both complexes.

The U. S. government also funded the construction of 720 low-cost prefabricated houses for construction workers building the rubber plants in Port Neches. Camp Neches, located on the rubber plant tract, also had two cafes, a warehouse, and nearly 100 ancillary buildings. By 1944, after the completion of the plant, the government deconstructed the houses and sold them for $22.50.[25]

Private investors also funded wartime housing projects. In early 1944, construction began on new residences in Beaumont, Port Arthur, and Port Neches. Approved by the War Production Board, the

project added 795 one- and two-bedroom wood-frame houses; 145 in Beaumont, 400 in Port Arthur, and 250 in Port Neches.[26]

### RACIAL TENSION

The sheer number of new residents in the county stretched thin much of its infrastructure, facilities, and institutions. The growth of the Black population forced integration since services and facilities could not accommodate segregation. The labor shortage and President Roosevelt's 1941 executive order prohibiting ethnic and racial discriminatory hiring practices in the defense industries forced employers to hire more Black workers for semi-skilled and skilled jobs, positions previously reserved for White workers. As a result, Black and White laborers worked side by side in the shipyards, on construction sites, and in plants. Combined with the food shortages and ration cards issued in Beaumont in 1941, tensions increased throughout the war to a point where the regional food administration head declared the atmosphere "conducive to riot."[27]

Following several incidents in Beaumont, including the shooting and injury of a Black military policeman on a city bus, tensions came to a head over several days in June 1943 during the Beaumont Race Riot. Sparked by the unsubstantiated claim that a Black man raped a White woman, White workers at the Pennsylvania Shipyard began terrorizing Black residents in Beaumont on June 15. Around 4,000 White looters pillaged Black-owned businesses and assaulted and terrorized Black residents with a variety of weapons, including guns. The city was placed under martial law and the mayor called in the Texas National Guard, who patrolled the city along with Texas Rangers and state police (Figure 86). In total, looters burned a number of buildings, ransacked hundreds of homes, injured around 60 people, and killed three people—two Black and one White—two during the riot and one weeks later due to injuries.[28] The police arrested around 200 people, and a military tribunal charged 29 of them with crimes including assault and battery, unlawful assembly, and arson. The remaining individuals were released, and no one was held responsible for the deaths caused by the riot.[29] Acting Texas governor A. M. Aikin, Jr. lifted the period of martial law on June 20, at which time Black and White workers returned to the Pennsylvania Shipyard.

Figure 86. Scene in Beaumont during the race riot of 1943. Simmering racial tensions fueled by the influx of laborers, housing and food shortages erupted in violence in the summer of 1943. ## AGRICULTURE AND PRISONERS OF WAR

During the war, Texas held over 50,000 prisoners of war (POWs), mostly Germans and Italians, at around 70 camps around the state.[30] Military bases held large numbers of POWs, while smaller non-military camps and branch agricultural camps typically held fewer than 400 men. Of the nearly 70 camps in Texas, small branch camps overseen by the Texas Agricultural Extension Service at Texas A&M University accounted for around a third. Small branch camps opened in areas in need of agricultural labor and where daily trips from larger base camps were impractical due to distance. Prisoners at these camps worked on farms and ranches across the state, helping fill the labor shortage created by war.[31]

Beginning in October 1943, German POWs arrived in Jefferson County. Joe Combs, the county agricultural extension agent in charge of overseeing POW labor, coordinated with larger camps in Texas and Louisiana to transfer approximately 500 POWs to Jefferson County to help with the annual rice harvest.[32] The first prisoners were first held at Tyrrell Park in Beaumont. To prepare the park, a barbed wire fence was built around the recreation center (extant), where prisoners were held, and guard towers were built at the four corners of the stockade. Army guards stayed in tents in the park's picnic area. During the park's time as a camp, between 1943 and 1945, all but the area around the recreation center remained open to the public.[33]

Throughout the remainder of the war, more German POWs arrived in Jefferson County at the request of rice farmers. To accommodate the additional POWs, the government established a second agricultural camp near China (an Official Texas Historic Marker denoting the site is located at North China Road, 2.4 miles north of US 90). Opened in September 1944 on a ten-acre tract of land leased by the U. S. government from the Stanolind Oil and Gas Company, the camp held 403 prisoners at its peak in August 1945.[34] Each day farmers picked up prisoners in the morning and returned them to the camp at night. Prisoners earned 25 cents per hour for general farm labor and up to three dollars a day for harvesting rice.[35] According to the president of the American Rice Growers association, POW labor proved crucial to rice farmers across the country, stating "They helped save our crop last year and they are doing it again now."[36] While most of the prisoners at the camp worked on area farms, some also worked at nearby sawmills. When the camp closed in December 1945, prisoners first returned to Huntsville and later to Germany. A water well dug by prisoners at the camp was the only remaining resource associated with the camp in 2000 when the THC erected an Official Texas Historical Marker at the site.[37]

## DEFENSE OF THE HOMEFRONT

In addition to the role the county's industries played in the war effort, the county also prepared itself against the possibility of an attack or invasion. Since the Civil War, the strategic location on the Gulf of Mexico made the country vulnerable to attack. The twentieth-century improvements to the county's port facilities and the county's oil refineries made its defense even more critical. In response to the need to protect the Texas coast and Jefferson County's industries, the federal government and civilians engaged in activities aimed at preventing an invasion and an attack from the coast.

### Sabine Pass Harbor Entrance Control Post

Leading up to the United States' entrance into World War II, the U. S. Army established regional command formations charged with defending the home front. Among the formations established in March 1941 was the Southern Defense Command. Headquartered at Fort Sam Houston in San Antonio, the command coordinated defense efforts along the Gulf of Mexico, home to the majority of the country's refineries and among the more vulnerable locations in the event of an invasion. The military built harbor entry defenses (called Harbor Entrance Control Posts) at Brownsville, Port Aransas, Cameron, Burrwood, and Sabine Pass.[38] The post at Sabine Pass consisted of several station buildings, an observation tower, searchlights, commander post, and part of the Coast Guard lifeboat station.[39] The

post also consisted of several storage facilities and munitions magazines for fuses, projectiles, and powder.

During the war, more than 20 German U-boats made their way to the Gulf of Mexico. They targeted oil tankers and cargo ships and successfully sunk 58 American ships in the Gulf of Mexico during the war.[40] U-boats were spotted off the coast of Corpus Christi during the war, and a sunken ship, discovered in 2009, near Sabine Pass suggests U-boats made their way to the Jefferson County coast during the war.[41] Despite the likelihood that German U-boats submerged near Sabine Pass during the war, the military at the post engaged in no military operations, only patrolling the beach and waters off the coast. The post remained active until 1944 when it was decommissioned and declared surplus. In 1945, the Army dismantled and abandoned the site, leaving only the munitions magazines that remain today within the Sabine Pass Battlefield Historic Site (Figure 87).

Figure 87. One of the extant World War II ammunition magazines built as part of the U. S. military's defense of the coast. The munition magazines are located within the Sabine Pass Battleground State Historic Site. Source: "Sabine Pass Battleground State Historic Site," Texas Historical Commission, accessed December 3, 2021, https://www.thc.texas.gov/historic-sites/sabine-pass-battleground-state-historic-site.

## Civilian Contributions

Jefferson County civilians also helped patrol the coast during World War II. In 1942, the Office of Civilian Defense (OCD) activated 21 Civil Air Patrol (CAP) Coastal Patrols. In Texas, the OCD established three posts – at Beaumont, Corpus Christi, and San Benito.[42] Between 1942 and 1943, CAP Coast Base No. 10, headquartered at the Municipal Airport in Beaumont, logged over 14,000 coast patrol flights between 1942 and 1943 (Figure 88). Comprised of both White and Black women and men—those unable to fight abroad for a number of reasons including age—the CAP helped scan for German U-boats in the Gulf of Mexico. Only White men flew aircraft in the CAP, while women and non-White men worked as radio operators, in administration, plotting board operators, and as typists (Figures 89-90).

# POSTWAR ERA: 1946–1978

Jefferson County emerged from World War II highly industrialized and urbanized. This trend continued for much of the postwar era, buoyed by the country's defense programs and oil and petrochemical needs spawned from the Cold War, Korean War, and the Vietnam War. Along with oil, agriculture maintained significance in the county, aided by improved farming practices and an expanded highway system that added hundreds of miles of paved roads in the county. These economic drivers and the expanded highway network led to growth and community development in communities in both eastern and rural Jefferson County. This period of continued industrialization, development, and community growth coincided with—and sometimes clashed with—various national trends and events including the end of Jim Crow, the Civil Rights movement, labor movements and strikes, and conservation efforts.

## POPULATION DEMOGRAPHICS

Following the rapid population growth of World War II, Jefferson County added fewer than 60,000 people in the subsequent three decades (Table 8). The post-war baby boom and continued industrialization during the Korean War in the 1950s contributed to the largest population growth in the postwar period, adding more than 50,000 people. Afterward, between 1960 and 1980, as the county's industrial markets and demands stabilized and industry and agriculture grew more mechanized, the county's population plateaued, hovering around 245,000.

*Table 8. U. S. Census statistics for Jefferson County showing population growth and demographic breakdowns between 1950 and 1980. Note that census statistics are subject to error, and census methodologies for recording race and ethnicity were inconsistent from decade to decade.*

| Year | Total | Growth Rate | White | | Black | | Foreign Born | | Hispanic Origin | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | | No. | % | No. | % | No. | % | No. | % |
| **1940** | 145,329 | 8.9% | 107,933 | 74.3% | 33,821 | 23.7% | 3,519 | 2.4% | - | - |
| **1950** | 195,083 | 34.2% | 150,858 | 77.3% | 44,122 | 22.6% | 3,225 | 1.7% | - | - |
| **1960** | 245,659 | 25.9% | 188,297 | 76.6% | 57,171 | 23.3% | 3,194 | 1.3% | - | - |
| **1970** | 244,773 | -0.36% | 183,100 | 74.8% | 61,064 | 24.9% | 2,937 | 1.2% | 8,600 | 3.5% |
| **1980** | 250,938 | 2.5% | 166,985 | 66.3% | 70,143 | 27.9% | 7,277 | 2.9% | 10,279 | 4.1% |

In the postwar era, the county's population remained predominantly urban and comprised of White and Black residents. Throughout the period, Jefferson County's population was roughly two-thirds White and one-third Black. Until 1980, more than 96 percent of the population was either White or Black. The majority of the Black population continued living in Beaumont and Port Arthur. In 1970, 95.9 percent of the county's roughly 61,000 Black residents lived in the county's two largest cities, with only around 2,500 Black residents residing elsewhere.[1] The Hispanic population remained small but made up an increasing percent of the population over the period. Some of this increase may be attributed to the United States' Bracero Program which brought in Mexican men between 1942 and 1964 to work on farms and on the railroad. These men likely worked on farms where equipment had not yet replaced manual labor: typically picking fruit, vegetables, and harvesting nuts.

A small number of Asian immigrants also started settling in Jefferson County toward the end of the period. Largely responsible for the nearly 150 percent increase in the county's "foreign born" population between 1970 and 1980 were Vietnamese refugees who settled in Jefferson County following the end of the Vietnam War in 1975. The first refugees arrived in large part because of three people: Dow Wynn, head of the Port Arthur relocation program; Father Tran Van Khoat, a Vietnamese Catholic priest in Beaumont; and Father William Manger, a Catholic priest in Beaumont (Figure 91). Though Khoat's vision for a Vietnamese farming, fishing, and manufacturing village in Jefferson County never transpired, he helped oversee the arrival of thousands of refugees in the 1970s. Following the arrival of the first

refugees in 1975, others soon followed not because they had a job or sponsor, but because they knew of someone living in the county. In addition to the refugees who arrived on their own, some other American cities sent their refugees to Beaumont, knowing a community existed in the county.[2] Once in Jefferson County, individual sponsors like Wynn and the resettlement program sponsored by the U. S. Catholic Conference through the diocese in Beaumont worked with the Vietnamese, though without much help from the federal government, the program was overwhelmed.[3] By 1976, the Golden Triangle—the name given to the Beaumont, Port Arthur, and Orange area—had over 1,200, mostly urban-dwelling Vietnamese residents, more than the Vietnamese population in some states. Though the federal government's official policy opposed the clustering of Vietnamese immigrants, a lack of enforcement contributed to the influx of Vietnamese into Southeast Texas in the late 1970s. Many of the refugees—tradesmen, fishermen, farmers, and clerks in Vietnam—settled in Beaumont and Port Arthur. With little English language skills, many first worked as fishermen and in blue-collar jobs. While unemployment among the Vietnamese was high throughout the 1970s, by the 1980s, some immigrants had opened shops and restaurants.[4]

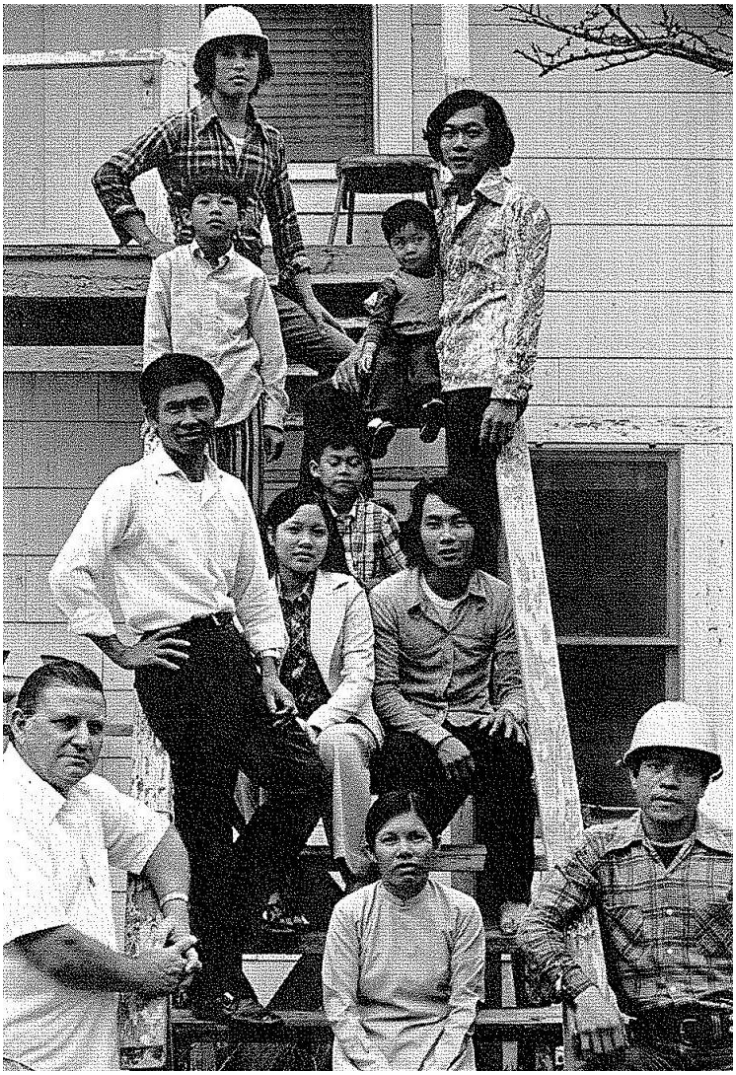

Figure 91. Dow Wynn with Vietnamese refugee Nguyen Van Nghi and his family in Port Arthur. Wynn helped with the relocation effort in the 1970s and sponsored a number of families himself. # AGRICULTURE

## Shift to Large-Scale Commercial Farming and Ranching

The postwar period saw agriculture remain a significant contributor to Jefferson County's economy. Despite a decline in the number of farms, from roughly 2,500 at the end of the war to 467 in 1978, the county gained agricultural acreage, reaching nearly 500,000 acres in 1950. As the number of farm units declined, farm size increased as agriculture in the county shifted toward large commercial farming and ranching (Table 9). The evolution into this large-scale farming was aided by several factors, including the continued mechanization of agriculture, technological advancements, and expanded irrigation and drainage.

*Table 9. U. S. Census of Agriculture statistics for Jefferson County between 1940 and 1978, available via https://agcensus.library.cornell.edu/. Note that census statistics are subject to error, and census methodologies for recording farms were inconsistent from decade to decade.*

| Year | No. Farms | Avg. Farm Size (acres) | Total Farm Acreage |
|---|---|---|---|
| **1940** | 2,387 | n/a | 317,684 |
| **1945** | 2,353 | 141.3 | 332,478 |
| **1950** | 959 | 508 | 487,176 |
| **1954** | 1,038 | 417.3 | 433,186 |
| **1959** | 724 | 583.3 | 422,292 |
| **1964** | 546 | 747 | 408,085 |
| **1969** | 502 | 697 | 349,930 |
| **1978** | 467 | 860 | 401,722 |

The modern equipment farmers and ranchers adopted in the postwar included gas-powered tractors. Tractors and other large equipment enabled farmers to till or seed ten times as many rows in a day. Postwar advancements to the combine similarly increased harvesting efficiency of crops including sorghum and corn. These machines allowed farmers to work more land with less power and ultimately contributed to the decline in farm tenancy, as well as the decline of reliance on draft animals (Figure 92).[5]

The period also saw the wide-spread use of pesticides and commercial fertilizers for the first time. Though used on a small-scale by some farmers in the 1930s, by the 1950s new products and the realization that pesticide use improved crop yields greatly increased the production and use of pesticides across the country. Similarly, organic fertilizers had also been used since the nineteenth century, but commercial fertilizers were not widely used until after World War II.

The expansion of irrigation and drainage also aided the county's agricultural sector. During this period, the Lower Neches Valley Authority (LNVA) completed several reservoirs upriver from Jefferson County. The U. S. Army Corps of Engineers completed Town Bluff Dam and B. A. Steinhagen Reservoir in 1953 and Sam Rayburn Reservoir in 1965.[6] The reservoirs added to the LNVA's supply of water used for industrial facilities, cities, hydroelectric power, and farms. The completion of the reservoirs "completely cured any [water shortage] problem," despite the increased acreage of crops according to the LNVA's manager in 1967.[7] In addition to the reservoirs, the LNVA built additional canals while also maintaining and enlarging existing canals, like the 14-mile canal roughly between Fannett and Port Arthur (Figures 93-94).[8] The LNVA, county, and Drainage Districts also continued work on improving drainage in the county, projects that benefited all residents, not just farmers. A new district, Drainage District No. 7 (DD7), organized in 1945 in mid- and south Jefferson County. Covering parts of the most hurricane-vulnerable and flood-prone sections of the county, DD7 helped add a hurricane protection system to the district after Hurricane Carla in 1961 (Figure 95).[9] The existing districts, Drainage District No. 3 (DD3) and No. 6 (DD6), also undertook a variety of projects aimed at improving and enlarging the drainage systems

in their districts, including construction of diversion ditches, storm sewers, and widening and deepening channels, including Taylor Bayou.[10]

Figure 92. Farmers on a machine in a rice field. Machines like the one in the photo from the postwar period transformed agriculture in the county by enabling farmers to work more efficiently on larger swaths of land with fewer people. The back of the photo reads, "Old-type machines could not cope with sticky gumbo soils and mud that modern machinery handles almost to perfection and to the rice-growers increased profit." Source: University of North Texas Libraries, The Portal to Texas History, crediting the Museum of the Gulf Coast, accessed December 30, 2021, https://texashistory.unt.edu/ark:/67531/metapth202441.

NEW LNVA CANAL EXTENSION—At a cost of approximately $1 million the Lower Neches Valley Authority is digging a 14 mile long canal from near Fannett to just below Jefferson County Airport near Port Acres where it will intersect with the present LNVA canal system.

The new canal is being constructed for the use of irrigating rice which has been solely dependent for water from Hillebrandt Bayou.

The new canal will augment the present canal which feeds water into Port Arthur, Gulf refinery and Texaco refinery.

Figure 93. Newspaper article with photo showing the new LNVA canal extension between Fannett and the Jefferson County Airport. According to the caption, the canal was built for irrigating rice fields, but also augmented the existing canal that supported the water systems in Port Arthur, and the Gulf and Texaco refineries. The continued expansion of irrigation in the postwar also contributed to industrialized farming. Source: *Beaumont Journal,* February 9, 1966, 11.

## Cattle and Rice

As in past periods, the chief agricultural products in Jefferson County remained rice and cattle. Dairy farming, historically one of the main sources of agriculture income, saw a decline after the war. Between 1940 and 1978, the number of milk cows in the county steadily dropped from over 7,000 to fewer than 1,000.[11] Predominantly located in eastern and southeastern Jefferson County, particularly in and around Nederland, dairy farms, along with smaller truck farms, steadily disappeared. As the area grew more industrialized and urbanized and land grew more expensive, owners sold their farms. Farmland in turn was developed. Cattle in the county, though, remained steady, roughly numbering between 32,000 and 44,000 . Practices from the previous period remained largely unchanged, though ranchers did incorporate new feed crops, such as sorghum, and improved breeding practices. Ranchers also benefited from new equipment and machines, using them to round up cattle and travel faster on large ranch lands (Figure 96). Despite the continued role cattle played in agriculture in the county, the period saw one of the county's largest ranches dissolve. The McFaddin Ranch, with origins dating to the nineteenth century, was sold in tracts between 1951 and 1979. Poaching and theft of cattle were factors in the decision to sell the ranch. Much of the coastal wetland acreage on the ranch became part of one of the three state parks and protected wildlife management areas created towards the end of the period. (See the discussion on Parks and Open Spaces that follows).

In 1974, Jefferson County's agricultural income was roughly $18 million, with crops accounting for 80 percent of that amount.[12] Farmers grew a variety of crops—primarily feed crops for livestock—including hay, sorghum, corn, and soybeans. Rice, though, remained the county's primary crop and source of agricultural income, grown on approximately 80 percent of the county's cultivated land, or roughly 60,000 acres, throughout the period.[13] The county consistently ranked among the state's top rice-producing counties throughout the period, producing over 2 million bushels each decade. Existing and new rice farmer organizations and cooperatives, as well as the experiment station (which moved from Amelia to Beaumont in 1945), continued to play important roles in the research and the disbursement of knowledge. Among the new practices adopted by farmers during this period was the introduction of new rotator crops. While farmers continued the practice used in past periods of rotating cattle and rice, by the mid-1960s soybeans, and to a lesser extent sorghum, emerged as the most common rotator crops.[14] Soybeans not only benefitted the rice crop by increasing soil fertility, but the crop also complemented rice in terms of labor and machinery needed. In addition to soybeans, farmers began experimenting with crawfish breeding in rice fields towards the end of the period to supplement their incomes. First practiced in Louisiana in the 1950s, the USDA followed with guidelines on proper practices for crawfish farming in the late 1950s. In Jefferson County, some farmers began introducing crawfish into their rice fields in the mid-1960s.[15]

Continued mechanization and technological advancements also aided rice farmers in this period. Larger, more efficient rice dryers replaced older dryers, speeding up the field-to-market time. In Nome, the Nome Rice Drying Company organized and built a new rice dryer facility along the railroad tracks around 1946 (Figure 97).[16] Part of the facility, including the concrete rice silos, are extant. By the end of the period, the Experiment Station in Beaumont was experimenting with new technology, testing out a solar-powered dryer.[17] Several years earlier, the station also installed the state's first underground pipeline irrigation system, a system easier to maintain and less susceptible to damage. The underground system also allowed aboveground land to be returned to cultivation once pipelines were removed. One of the more significant changes to the rice industry, though, was the introduction of planes for planting seed and spraying fertilizer and pesticides. Two veterans, who had easy access to planes, worked with a Jefferson County rice farm to seed the first rice field in country using a plane in 1946.[18] Soon after, the practice was readily adopted by farmers across the county (Figure 98).

## INDUSTRY

Jefferson County remained a highly industrialized county in the postwar period. Despite the closure of the county's last sawmill, marking the end of one of its oldest industries, other industrial sectors grew in importance. The commercial fishing and shrimping industry remained relatively small, compared to other coastal counties, and remained centered in and around Sabine Pass, where seafood shops, docks, and marine service and repair shops operated on the water (Figure 99). Manufacturing and construction were also important economic drivers. In support of these industries, the county's plants and quarries produced and provided concrete, asphalt, and other construction materials. Non-industrial sectors, including retail, finance, and banking, also emerged as important economic drivers, though they were largely confined to Beaumont and Port Arthur. Several emerging industries tied to agriculture also established plants in Jefferson County. In China, the Farm and Agri-Chemical Company built a 6,000-square-foot fertilizer plant north of the railroad tracks in 1965 [field survey did not identify this building].[19] The company, which produced fertilizer, herbicides, insecticides, and pesticides, hoped to help area rice farmers control fire ants causing damage to their crops. Mobil Chemical opened another fertilizer plant near its Mobil Oil plant in Beaumont in 1965.[20]

Figure 99. The Sabine Seafood Inc., a seafood shop, along the dock in Sabine Pass sometime in the late 1940s. Commercial fishing in Jefferson County was comparably small, as Sabine Lake was one of the only major Texas estuaries that did not have a commercial fishery. Even so, shellfish were commercially caught in the waterway. Source: University of North Texas Libraries, The Portal to Texas History, crediting Port Arthur Public Library, accessed December 12, 2021, https://texashistory.unt.edu/ark:/67531/metapth79686/.

## Oil and Petrochemicals

Despite the diversification of Jefferson County's industry during this period, oil and petrochemicals remained the base of the county's economy, contributing to much of the growth in other sectors, like oil field machinery, while also bringing in $60 to $70 million of annual revenue.[21] An immediate post-war oil shortage boosted the industry, as the country's demand for oil spiked as a result of the Korean War and increased use of gas-powered automobiles and equipment. Following the initial spike, the oil industry remained steady, benefiting from events including the Cold War, the oil embargo in 1973, and unrest in Iran, before collapsing in the 1980s. Despite fluctuations in supply and demand and mechanization that led to layoffs, oil and oil-related industries remained the main economic driver in Jefferson County throughout the period.

Immediately after the war and into the 1950s, the country's demand for oil stimulated a surge in exploration, drilling, and production of oil and natural gas. In Jefferson County, drilling continued at existing fields—including Spindletop, Fannett, LaBelle, and South China—while new fields opened at Big Hill, Stowell, and the Gilbert Ranch near Fannett (Figure 100). Consequently, the county's seven refineries remained active throughout the period. Home to two of the country's largest refineries, Jefferson County employed 18,400 refinery workers in 1955, the third highest in the country.[22]

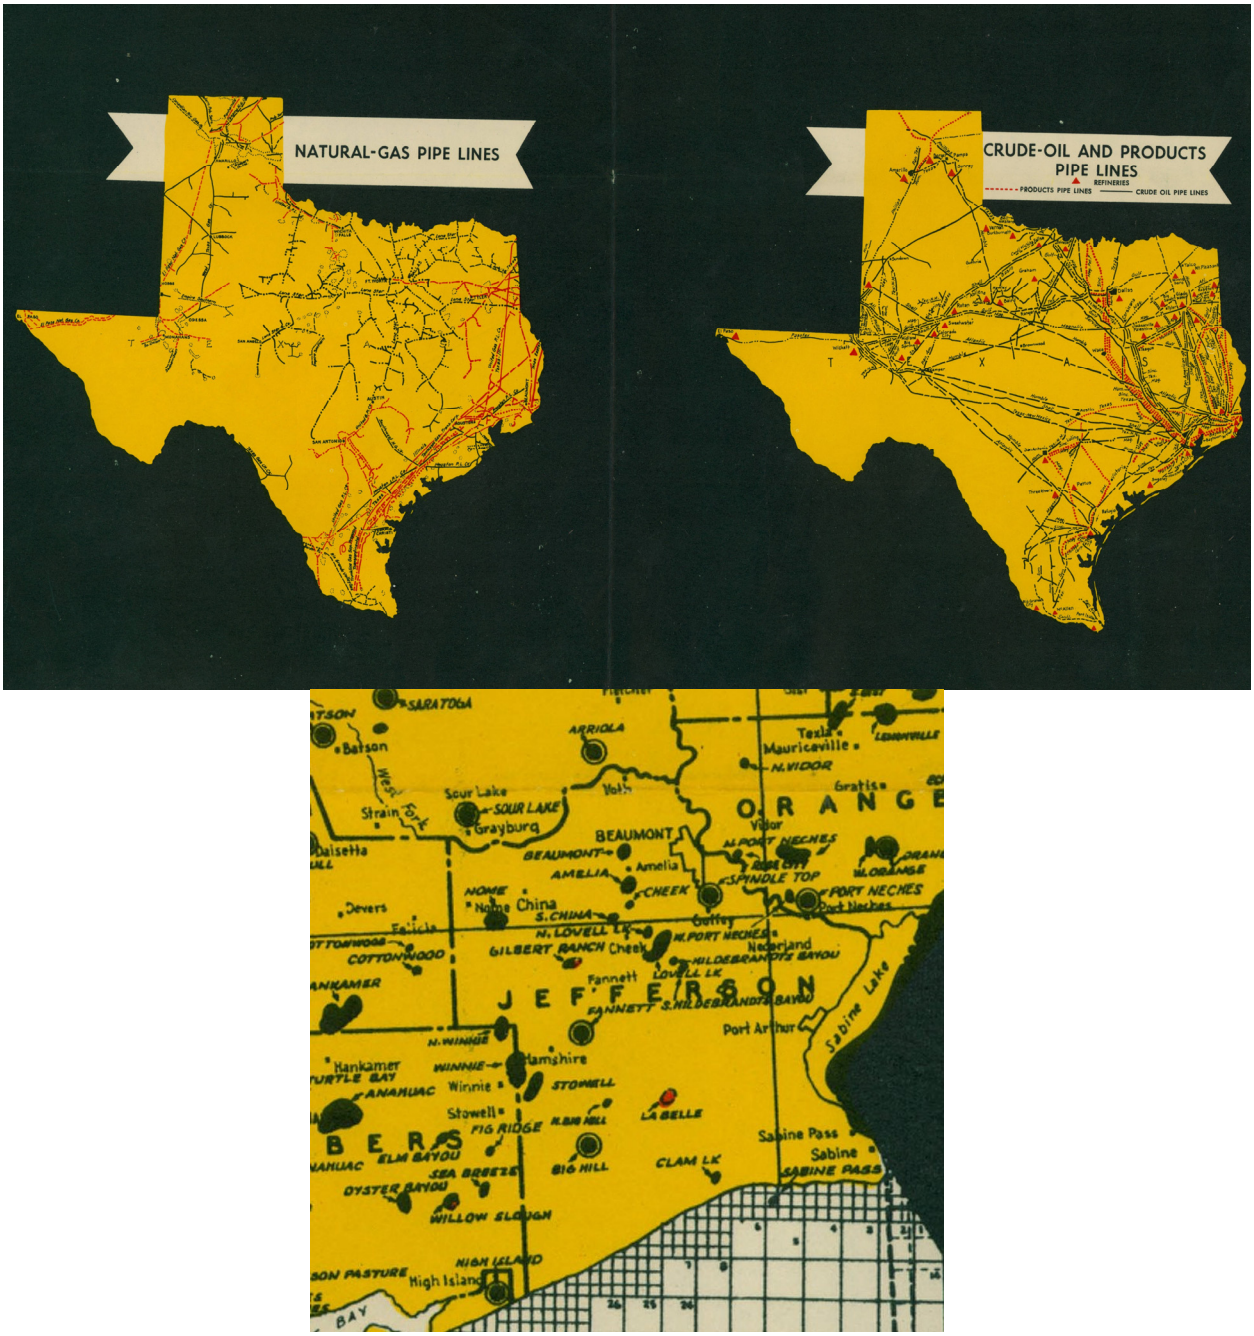

Figure 100 (with insets Jeff-co and Pipelines). 1951 map of Texas (Jefferson County inset) showing oil (black) and gas (red) pools and salt domes. Pipelines and refineries are also shown. Source: *Journal Guide to Texas Oil*, Petroleum Publishing Co., 1951, from the University of Texas at Arlington Library, Special Collections, accessed December 4, 2021, https://cdm16465.contentdm.oclc.org/digital/collection/p16465coll1/id/80/.

The petrochemical industry also flourished in this period. Existing plants, including the rubber plant in Port Neches, maintained operations throughout the period, while new plants producing a variety of petrochemicals and organic chemicals including butane, ethylene and isocetyl alcohol, and oxygen also opened (Figure 101).[23] During this period, the Golden Triangle was second only to the Houston area in concentration of petrochemical plants in the state.[24] While Beaumont and Port Arthur maintained their positions as centers of the refinery and petrochemical industries, both adding new plants in the postwar period, including a Gulf Oil plant in Port Arthur and a Dupont plant in Beaumont, other cities also saw plants open in the postwar. In 1961, Goodyear Tire and Rubber Company opened a new chemical rubber

plant on Interstate Highway (IH) 10 in Cheek. Built on a 400-acre site in a former rice field, the plant received raw materials from the refineries via pipelines [11357 IH 10, outside Beaumont city limits].[25]

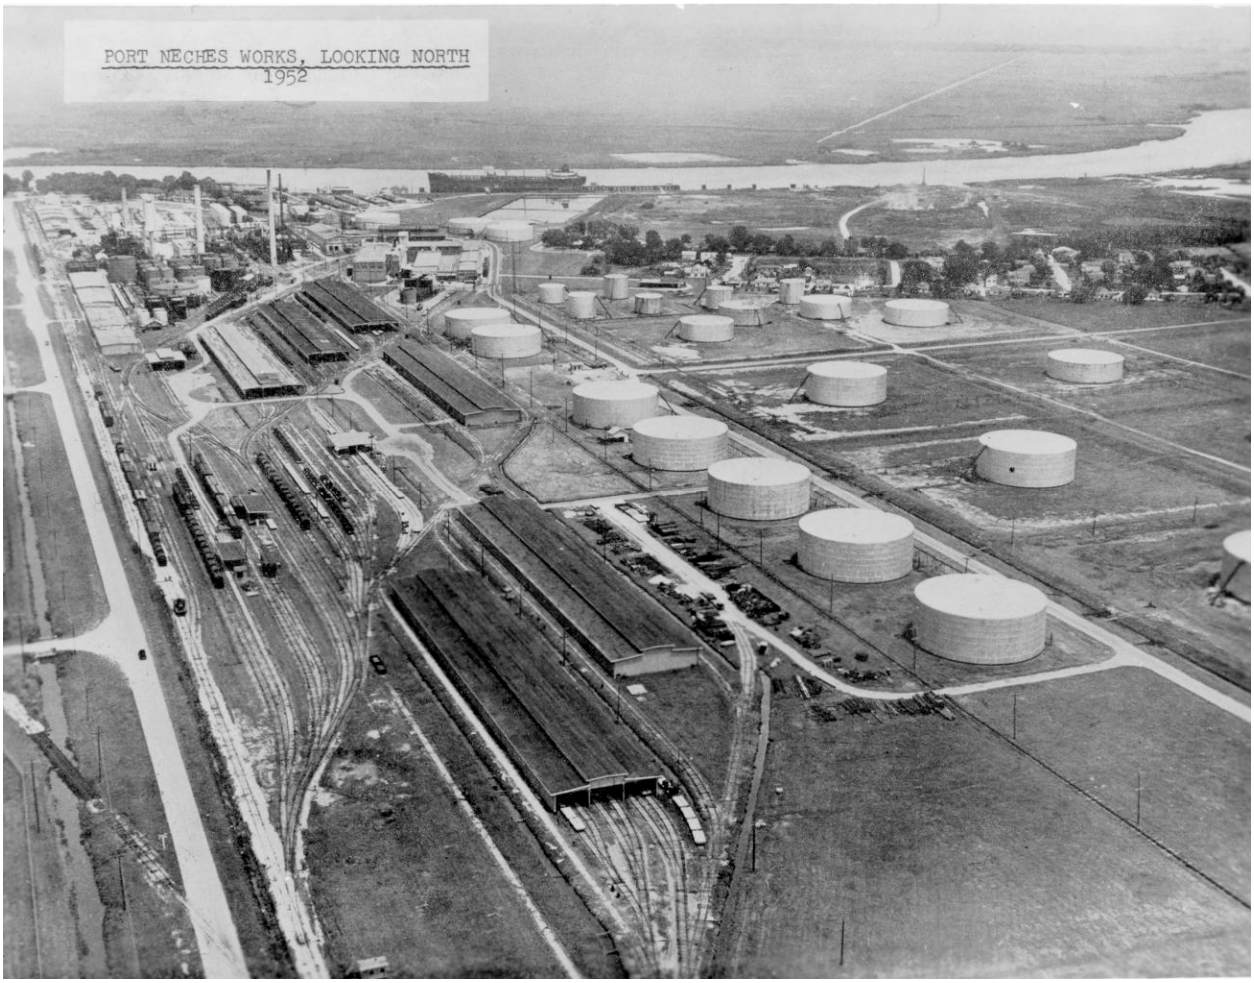

Figure 101. View of the Texaco Port Neches refinery on the Neches River in 1952. Source: University of North Texas Libraries, The Portal to Texas History, crediting the Museum of the Gulf Coast, accessed December 2, 2021, https://texashistory.unt.edu/ark:/67531/metapth201805/.

The flurry of oil exploration also contributed to the growth of several other mineral industries. In addition to oil and natural gas, drillers discovered sulfur in the county. Found in the Spindletop and Fannett salt domes, the Texas Gulf Sulphur Company initiated sulfur mining at these sites in the 1950s. In 1966 a new sulfuric acid plant opened in Port Arthur and by 1980 Jefferson County was one of three counties producing around half of the state's recovered sulfur.[26]

The postwar demand for oil also extended into a new realm that transformed the oil industry: offshore drilling. Until this period, offshore drilling in Texas was limited, restricted by primitive equipment, high costs, and regulations. In late 1930s, exploration for oil fields in the Gulf of Mexico resulted in the state's first offshore well completed near Sabine Pass in 1941. Though it was not commercially successful, it proved the possibility for drilling in the area.[27] World War II and the threat of U-boat attacks halted all offshore drilling activity in the Gulf, but new research and technology developed during the war facilitated more economical drilling in the postwar. Passage of laws at the state and federal level in the 1950s removed a number of restrictions, further contributing to the growth in the offshore drilling industry. As a result, existing oil companies added offshore divisions and new companies entered the industry.

### Shipbuilding

The prosperity of offshore drilling extended to the shipyards, which saw a decline in activity after the war. Shipbuilding advances during the war enabled companies to easily transition from shipbuilding to mobile offshore rig building (Figure 102). The Bethlehem Shipbuilding Company (which acquired the Pennsylvania Shipyard in the late 1940s) became one of the nation's most dominate offshore drilling equipment makers, building nearly 70 rigs between 1964 and 1984.[28] To facilitate the rigs, the company expanded the yard in 1950, adding a floating drydock, berthing basin, pier, and bulkhead.[29]

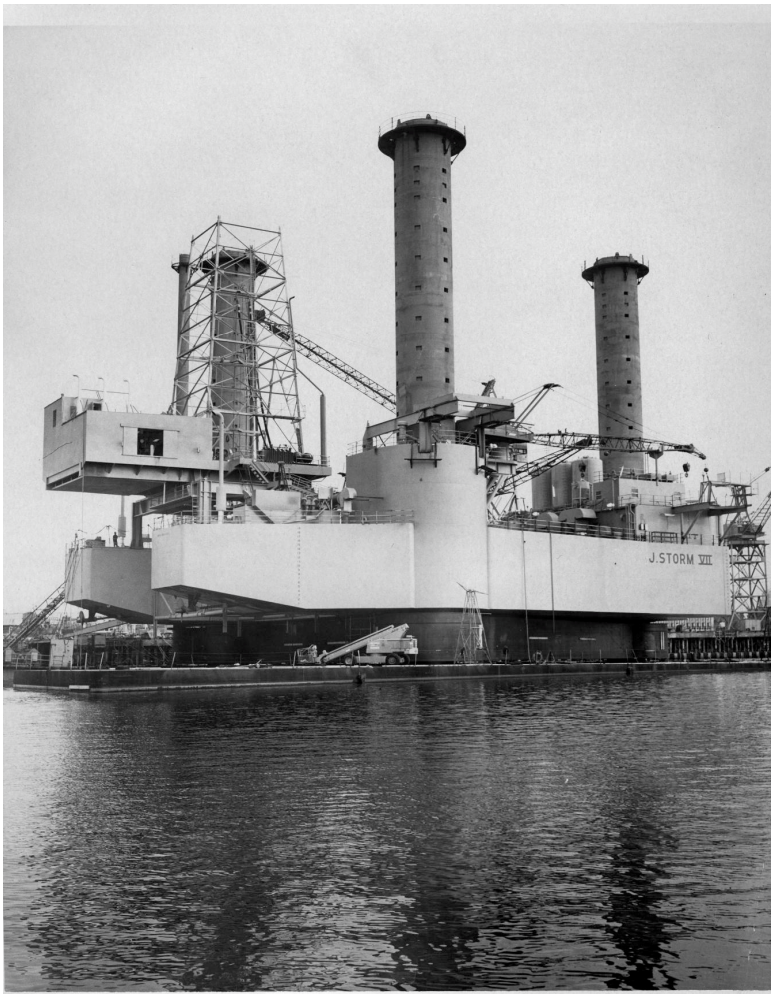

Figure 102. An offshore oil drilling rig in Port Arthur in 1976. Rigs like this one, the J. Storm VIII, were built at the Bethlehem Shipyards in Beaumont during the period as offshore drilling grew more prominent. ## TRANSPORTATION

The postwar period saw expansions and improvements made across most of the county's transportation networks. In 1944, Jefferson County opened the Jefferson County Airport (renamed Jack Brooks Regional Airport in 2010) southwest of Nederland. During the 1950s and 1960s, the county expanded the airport, adding acreage, new buildings, runway lights, and new taxiways (Figure 103). The airport, the county's main civilian facility, was popular among petrochemical, oil, and manufacturing executives with business in the county.[30] In Beaumont, the city transitioned Beaumont Municipal Airport into a general aviation airport after Jefferson County Airport opened and replaced the original terminal building in the 1970s.

Continued dredging and improvements to both the Sabine-Neches Canal and the Sabine-Neches Waterway over the period facilitated increased usage and deepened and widened both waterways. By the end of the period, the canal was 40 feet deep and 400 feet wide and the waterway was 44 feet deep

and 400 feet wide.[31] The widening of the canal required a new bridge, as ships continually hit the 1931 bridge. The new bridge, Gulfgate Bridge (renamed Martin Luther King, Jr. Bridge) along SH 82, opened in 1970 (Figure 104). The continued work on the waterways also created a persistent erosion problem at Pleasure Island and Sabine Lake, as dredged materials washed into the lake. To alleviate the problem, the U. S. Army Corps of Engineers created two disposal areas in the lake, above and below Port Arthur. Earthen levees covered with stone were built between the disposal areas and a roadway between the two opened in 1974 (Figure 105).[32] These improvements were vital to the port activity in Jefferson County, which ranked 15th in the nation in tonnage in 1960. By 1979, over 75,000,000 tons of goods and products passed through Sabine Pass, second in the state only to Houston area ports.[33] Throughout the period, the port and waterways not only provided vital transportation to the county and region's businesses and industries, but they also served as economic drivers, creating and supporting a wide variety of jobs.

Figure 103. The Jefferson County Airport (renamed Jack Brooks Regional Airport in 2010) in 1964. The county opened the airport near Port Arthur in 1944, at which time it became the county's primary passenger airport. Source: University of North Texas Libraries, The Portal to Texas History, crediting the Museum of the Gulf Coast, accessed December 24, 2021, https://texashistory.unt.edu/ark:/67531/metapth202655/.

The county's road network also continued expanding in the postwar period. Despite the extensive road building of the previous period, much of rural Jefferson County still lacked well-paved roads. As a result, many of the county's farmers and ranchers remained isolated and far removed from services including hospitals, schools, and libraries in the eastern portion of the county. This problem—not unique to Jefferson County—was systemic across the state. In an effort to improve the state's rural secondary roads and provide farmers and ranchers better access to markets, medical facilities, and other services in larger communities, the Texas Highway Department (THD) developed the Farm-to-Market (FM) program in the late 1930s. Set back by the outbreak of World War II, funding and development of the road system began in earnest in 1945, when the THD authorized a three-year pilot program for the construction of new FM highways. Following the success of the pilot, in 1949 the THD expanded the program. The expansion made federal funds available for the construction of FM roads so long as the county or road district furnished the right-of-way and 75 percent of the actual construction cost. In return, the THD covered the remaining costs, provided engineering and construction services, and provided future road maintenance.[34] In consultation with county commissioners, the THD designated and improved hundreds of miles of FM roads in Jefferson County over the period. Between 1948 and 1949, the THD designated FM 364, FM 365, FM 823, FM 1009, and FM 1406.[35] In addition to paving

these roads and providing maintenance throughout the period, THD also built new bridges along their alignments, including the Hillebrandt Bayou Bridge on FM 365 in 1951.

Along with the FM highway system, improvements to the existing highway system and the new interstate highway system built through the county further connected farmers and communities to one another during this period. In addition to grading and paving projects on many of the county's state and U. S. highways, the THD completed US Highway 90 improvements in the 1960s. The project expanded US 90 west of Beaumont and included the construction of two additional lanes, providing a four-lane divided highway and divided urban sections through small towns including Nome and China (Figures 106-107).[36] The largest road project of the period, though, was the completion of Interstate Highway 10 (IH 10). The construction of IH 10 was part of the nationwide development and construction of an interstate highway system, stemming from President Eisenhower's Federal Aid Highway Act of 1956. The legislation called for the construction of 41,000 miles of interstate highways across the country with the federal government paying 100 percent of the land acquisition costs and 90 percent of the construction costs.[37] IH 10 through Jefferson County was part of the country's southernmost cross-county interstate, connecting Florida to California. Completed between 1960 and 1965, IH 10, like many interstate alignments, followed an existing highway alignment. Entering Jefferson County from the east in Beaumont, IH 10 dropped south and roughly followed the alignment of SH 124 though Cheek before slightly diverging from the highway, bypassing Fannett and Hamshire to the north. (See the discussion of Land-Use Patterns and Community Development Trends for information about how these roadways impacted development.)

# LAND-USE PATTERNS AND COMMUNITY DEVELOPMENT TRENDS

Jefferson County grew more urban, suburban, and densely populated due to growth in the eastern part of the county in the postwar period. Between roughly 80 to 94 percent of the population lived in cities and their suburbs in eastern Jefferson County in the postwar period. While eastern Jefferson County experienced continued industrialization and development, much of the rest of the county remained characteristically rural. The prosperity, growth, and development of communities across the county, though, was significantly tied to the county's expanded road network and industry.

## Eastern Jefferson County Land-Use Patterns

Between 1950 and 1960, the largest cities in Jefferson County—Beaumont, Port Arthur, Port Neches, Nederland, and Groves—all experienced significant increases in their populations, in large part due to the continued prosperity of the oil and petrochemical industry.

*Table 10. Population growth in Jefferson County's most populous cities. Source: U. S. Census Bureau, 1940–1980, https://www.census.gov/.*

| Year | Beaumont | Groves | Nederland | Port Arthur | Port Neches |
|---|---|---|---|---|---|
| **1940** | 59,061 | - | | 46,140 | 2,487 |
| **1950** | 94,014 | - | 3,805 | 57,530 | 5,448 |
| **1960** | 119,175 | 17,304 | 12,036 | 66,676 | 8,696 |
| **1970** | 115,919 | 18,067 | 16,810 | 57,371 | 10,894 |
| **1980** | 118,102 | 17,090 | 16,855 | 61,195 | 13,944 |

Though their populations generally plateaued—declining in the case of Beaumont and Port Arthur in the 1960s—land development began to overlap, so that distinguishing one city from the next grew more difficult (Figure 108). Port Arthur and Beaumont both entered into annexation efforts in this period, expanding both of their city limits and bringing "within their boundaries a number of multi-million-dollar industrial plants."[38] Among the communities annexed by Beaumont include Amelia, Helbig, Voth, and Rosedale. Meanwhile, Port Arthur incorporated Griffing Park, Lakeview, Pear Ridge, and Sabine Pass into its city limits during the period and in the early 1980s.

While each city in Jefferson County had a downtown with a commercial node from earlier periods, new commercial development along the highways and interstate drew more and more business away from these historic cores. Suburban commercial nodes developed along US 69 and the Twin City Highway (SH 347) between Beaumont and Port Arthur and stretched north and west of Beaumont along Interstate Highway 10, and US 90 and US 96. In 1965, the *Beaumont Journal* reported that along IH 10 "over half a million dollars in construction work is in progress along the giant thoroughfare," including gas stations, office buildings, and restaurants.[39] Suburban commercial development occurred in the other eastern Jefferson County communities, too. One of the earliest commercial enterprises was the Schooner Restaurant in Nederland. Opened at 1507 US 69 in 1947, the seafood restaurant remains open today (Figure 109). Similarly, historic industrial patterns remained intact, with refineries and plants maintaining their presence along the Neches River, canals, and rail alignments, but new industrial nodes also developed farther removed from city centers, along the major highways and interstates. The industrial development along IH 10 just southwest of Beaumont city limits in Cheek reflects this trend. The Goodyear plant that opened there in the 1960s did so in part for the access to IH 10 and availability of land for expansion.

New residential areas also developed in the cities in eastern Jefferson County. Nederland saw new residential areas open in nearly every direction from downtown, filling in undeveloped and historically agricultural lands within its city limits. Among the new subdivisions include the 45-acre neighborhood developed by William Doornbos and H. P. Youmans along Helena Avenue in 1952 and Armstrong Estates west of downtown in 1958.[40] Likewise, in neighboring Port Neches, new residential areas opened around

its commercial core and its industrial nodes to the east and west. Among the new subdivisions was the Pine Lane housing addition in south Port Neches, opened in 1965.[41] Bounded by Port Arthur to the southeast, southwest, and northeast, and Port Neches to the west, Groves saw much of its undeveloped land fill in with residential subdivisions. Suburbanization also saw the development of a new community in northeastern Jefferson County in the early 1960s. Consisting of two subdivisions, Bevil Acres and River Oaks, Bevil Oaks grew in population from 370 to 1,306 between 1963 and 1980.[42]

New developments continued to benefit from Federal Housing Administration (FHA) loans. As in the previous period, they also continued to favor White families; less than two percent of FHA loans issued between 1947 and 1959 went to African Americans.[43] Even though Port Neches, Nederland, and Groves were predominantly White, developers still used deed restrictions in new subdivisions, preventing Black men and women from buying in the neighborhood; this practice continued until 1968 when a court ruling deemed racial covenants illegal. Throughout the 1950s and 1960s, according to a former resident, racism was particularly prevalent in Port Neches, where there was "one overarching, unwritten deed restriction: No blacks were allowed," and where Black residents in Port Arthur and Beaumont "drove through mid-county with great reluctance and only out of necessity."[44]

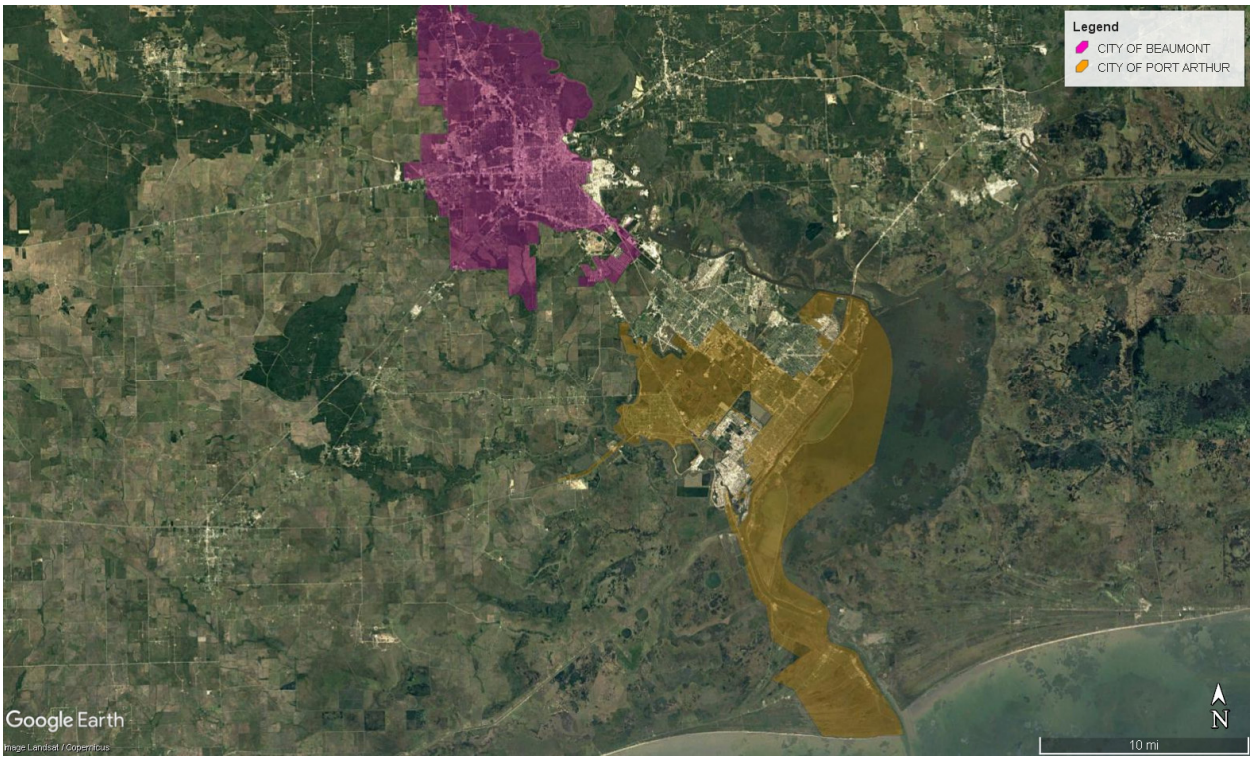

Figure 108. Aerial image from 1984. Current Beaumont city limits are shaded in purple. Current Port Arthur city limits are shaded in orange. Beginning in the postwar period, the two cities entered into a period of annexation, expanding their city limits and tax revenues. Annexation along with growth in the other mid-county cities in eastern Jefferson County resulted in nearly continuous development along the Neches River. In particular, the boundaries of Port Arthur, Port Neches, Nederland, and Groves grew more indistinguishable during the postwar period. Source: Image Landsat/Copernicus, Google Earth.

Figure 109. The Schooner Restaurant on US 69 in Nederland in 1955. The restaurant is representative of the type of commercial development that occurred in eastern Jefferson County during this period. Located on the highway, the restaurant, like most of the new commercial construction, was not in the historic downtown cores that developed earlier. Opened in 1947, the Schooner Restaurant remains in operation (they rebuilt in the same location after a fire in 1960) at 1507 South Highway 69. ## Rural Jefferson County Land-Use Patterns

Outside of the urbanized section of eastern Jefferson County, much of the rest of the county experienced minimal to moderate levels of development, remaining characteristically rural. A number of factors led to intermittent growth and decline in rural areas during this period. While closely tied to agriculture, many rural communities also were closely tied to the oil industry. As a result, these communities experienced periods of growth and decline caused by fluctuations in both sectors. During this period, the oil and natural gas fields at Fannett, Stowell, and China helped support nearby communities, and industrial expansion along the interstate and highways west of Beaumont also contributed to development in the nearby communities of Cheek and Fannett. Populations of these communities fluctuated but typically remained in the hundreds. Some communities, including China, Nome, and Hamshire, had higher populations by the 1980s than at the beginning of the period.[45]

Development patterns followed those set in the previous period, with commercial and industrial buildings located along the railroad tracks and main thoroughfares through each community. Gas stations, garages, and convenience stores accounted for most of the new commercial development in this period, spawned by highway improvements and expansions. North and south of the main thoroughfares, residential development filled in and expanded outward from past periods (Figures 110-112). While much of the residential construction was infill and not in new subdivisions, several new subdivisions were planned in rural communities. In Hamshire, spurred by the growth of nearby Winnie in Chambers County and "in anticipation of industrial growth," land developers from Beaumont laid out

a new subdivision with half-acre tracts south of town.[46] Similarly, in Fannett, developers laid out a new subdivision on more than 500 acres northeast of town in the early 1960s. Located just off SH 124, Green Acres was intended for employees at the industrial development, including the Goodyear Tire Company plant in Cheek, on IH 10 southwest of Beaumont (Figure 113).[47] Green Acres, similar to other postwar subdivisions in Beaumont and across the country, incorporated curvilinear streets into its design. In Taylor Landing, in between Port Arthur and Hamshire, a new residential subdivision with curvilinear streets and Ranch-style houses developed in the 1960s. Named Country Club Estates, the subdivision filled in throughout the historic period and in 1978 the adjacent country club opened.

## Community Development

While Beaumont and Port Arthur remained the government, commercial, and entertainment centers of the county, community development blossomed in many of the other communities in Jefferson County in the postwar period (see sidebar on Entertainment and Entertainers). As populations grew in these communities, so too did municipal services, recreational facilities, and cultural offerings. In addition to new churches and new post offices, new city government and other public buildings also opened in various communities (13 resources identified during fieldwork are recommended eligible for listing in the National Register as part of a proposed post-war public buildings of Jefferson County multiple property nomination). Nome and Groves, both incorporated in the postwar era, opened new city hall buildings in existing buildings – in Nome at 1586 2nd Street and in Groves at 3998 Lincoln Avenue (Figure 114). Other services, including fire departments, also organized. While Port Neches and Nederland already boasted fire departments, both Groves and Nome added volunteer departments (Figure 115). In Nome, the volunteer fire department organized in 1963. Sponsored by the Nome Lions Club, the department was stationed at the Briggs Motor Company on US 90 in town.[48] In the communities with existing libraries—Nederland, Port Neches, and Groves—population growth facilitated the need for larger libraries in each community. Both Nederland and Port Neches outgrew the libraries constructed in this period in the 1980s, but the Groves Public Library built in 1964 on West Washington Street continues to serve the community (Figure 116). In rural Jefferson County, the county library's bookmobile service, enabled by the improved and expanded roadway network, began servicing the communities of Fannett, China, Hamshire, and Nome during this period. Recreationally, new city parks and recreational facilities opened in both Nederland and Groves. One park, Lions Park in Groves at 6200 Jackson Boulevard, opened in the late 1940s and added a pool in the 1950s with a municipal bond (the pool closed in 2016).[49] The county's first golf course outside of Beaumont and Port Arthur also opened in the postwar. Bayou Din Golf Club, a privately funded golf course, opened in 1959 south of Beaumont at 8537 LaBelle Road, in between Cheek and LaBelle on former agricultural and wooded land (Figure 117). New cultural offerings also developed, including the Dutch Windmill Museum in Nederland in 1969 (1500 Boston Avenue), and festivals including the Nederland Heritage Festival in 1973 and the Groves Pecan Festival in 1969 (Figure 118).

FUTURE CITY HALL—The present First State Bank building of Groves will be the new Groves City Hall by January. Recently, transactions were completed between the city officials and the bank officials for the city to purchase the bank building with payments over a period of years at a cost of $105,000. City officials and department heads expect to occupy the building located at Lincoln Avenue and 39th Street, as soon as the new First State Bank building is completed at 39th Street and Twin City Highway.

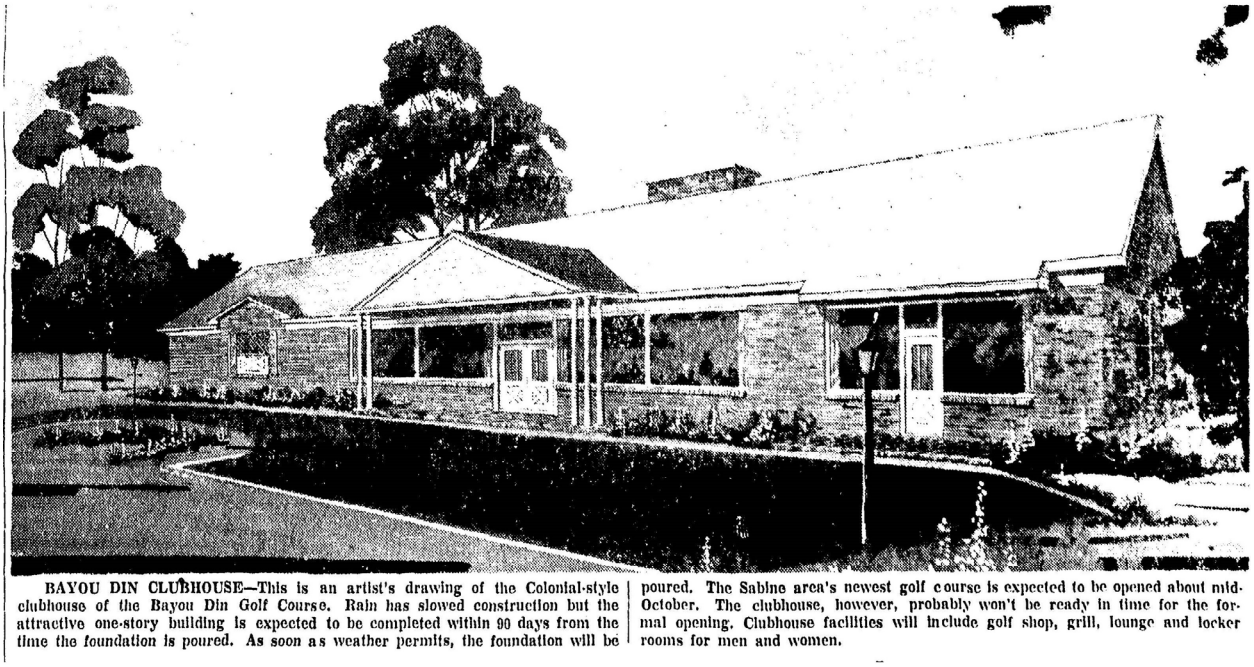

Figure 114. In the postwar period, several communities incorporated and opened new city halls. Groves was among the communities to do so. In 1964, City Hall opened in the former First State Bank building at Lincoln Avenue and 39th Street (extant). The bank, following commercial trends, moved to a new building on Twin City Highway. BAYOU DIN CLUBHOUSE—This is an artist's drawing of the Colonial-style clubhouse of the Bayou Din Golf Course. Rain has slowed construction but the attractive one-story building is expected to be completed within 90 days from the time the foundation is poured. As soon as weather permits, the foundation will be poured. The Sabine area's newest golf course is expected to be opened about mid-October. The clubhouse, however, probably won't be ready in time for the formal opening. Clubhouse facilities will include golf shop, grill, lounge and locker rooms for men and women.

**Jefferson County Musicians and Entertainers**

In 1994, the Gulf Coast Music Hall of Fame opened in Port Arthur. Among the more than 60 musicians from the Gulf Coast featured at the museum include a number of musicians who emerged from Jefferson County. The various music genres represented—blues, country, Cajun, zydeco, jazz, and rock-and-roll—reflect the county's diverse ethnic, racial, and cultural influences. Jefferson County artists featured at the museum include Clifton Chenier, the "King of Zydeco," who moved from Louisiana to Port Arthur in 1947, working at a refinery during the day and playing shows at night. Famed rock-and-roller, Jiles Perry Richardson, known as the Big Bopper, was born in Sabine Pass and raised in Beaumont where he later had a popular radio show on KTRM in the late 1940s and 1950s. Country musician and movie star Tex Ritter is also featured at the museum. Ritter lived in Nederland during high school in the late 1910s before he made it big as a country music and movie star. In addition to the Gulf Coast Music Hall of Fame, Ritter is also honored in Nederland at the Dutch Windmill Museum and with Tex Ritter Park. Jazz musician Ted Dunbar got his start playing in Port Arthur in the late 1940s and 1950s is also featured at the museum. Probably one of the most recognizable musicians to come from Jefferson County was Janis Joplin (Figure 119). Born in Port Arthur, the eclectic mix of music played on the radio and in clubs in Port Arthur and Beaumont inspired Joplin. In addition to the museum, historical markers and sculptures in Beaumont and Port Arthur, where the county's clubs were all located, also honor Joplin and other county musicians.

Figure 119. Janis Joplin (second row, second from the left) in 1954 as part of the First Christian Church of Port Arthur Youth Choir. Joplin graduated from Jefferson High School in Port Arthur in 1960 and spent several years at Lamar State in Beaumont before transferring to the University of Texas at Austin and ultimately making it as a blues and rock-and-roll musician. **The Civil Rights Movement in Jefferson County**

Segregation at public facilities such as parks and pools existed in Jefferson County as it did throughout the country during the Jim Crow era. The fight to end segregation and for civil rights began in earnest in Jefferson County in this period, aided by activists and the passage of the Civil Rights Act of 1964, prohibiting discrimination on the basis of race, religion, sex, or nationality. While segregation existed across Jefferson County, Beaumont and Port Arthur, home to the majority of the county's Black population, ultimately became the center of the Civil Rights movement and home to many of the county's integration battles. Leaders of the movement included lawyers Elmo Willard III and Theodore Johns. Together the two worked with the NAACP to fight for desegregation at parks, schools, and other public facilities in Beaumont and Jefferson County (Figure 120). In 1955, they won a federal lawsuit on behalf of Black golfers who wanted to play at the public course at Tyrrell Park. The court decision, the first in the South, ordered Beaumont end segregation at its public golf courses, its public parks, and its recreational facilities.[50] Willard and Johns also successfully argued for the end of segregation at Lamar University (then named Lamar State College of Technology) in Beaumont in 1956. Following the federal ruling ending segregation, violence erupted at the school as White picketers and protesters set crosses aflame and harassed and abused Black students. Willard and Johns, as well as other local members of the NAACP, were also subjected to the threat of bombs and shootings at their homes. Despite the violence, 23 Black students enrolled at Lamar in 1956, and six graduated two years later.[51] Willard also represented plaintiffs fighting for enrollment at local public schools during the fight for integration.

In 1954, the United States Supreme Court ruled in favor of school integration in *Brown v. Board of Education*. In Texas and in Jefferson County, individual school districts were in charge of creating their own integration plans, which often meant the desegregation process was neither immediate nor swift. Port Arthur and Beaumont both began the integration process in the 1960s, though faced court battles and complaints over integration efforts into the twenty-first century. Some rural school districts in Jefferson County also faced court battles over integration following denial of enrollment to Black students. One event occurred in 1962 at Fannett Elementary School in the Hamshire-Fannett school district, when the school superintendent refused admission to fifteen Black students who attempted to enroll at the school.[52] The next year, a father in Cheek filed a civil suit seeking integration of schools in the school district after his children were denied enrollment.[53] The U. S. District Judge overseeing the case, and a similar case in Beaumont, ruled against immediate total desegregation and stipulated that the school district initiate a grade-a-year integration plan, as it had no integration plan in place.[54] The 12-year, grade-a-year plan was overturned in 1967 following the U.S. 5th Circuit Court of Appeals ruling. The ruling required that six states, including Texas, integrate all public schools and facilities by the fall of 1967.

In addition to segregation of businesses, schools, and recreational facilities, African Americans also suffered from political gerrymandering, multimember districts, stub signing requirements, and inhospitable polling locations that limited the Black vote and diluted their voice. White residents and officials also used the threat of force and harassment to prevent the Black population from voting, ultimately keeping Black politicians from winning political office for much of the postwar period. At the end of the period though, in 1976, the citizens in and around Beaumont elected the first African American from Southeast Texas to the Texas House of Representatives. Albert Price, an Air Force veteran who broke barriers as a Black commercial airline pilot, served as a state legislator for 22 years (Figure 121). Following Price, Jefferson County elected its first Black official in 1986. Edward Moore was elected as a County Commissioner after a federal voting rights lawsuit redrew precinct boundaries. He served four terms, stepping down in 2001. Since Moore, Jefferson County elected its first Black County Clerk, Carolyn Guidry, in 2004 and the state's the first Black female sheriff, Zena Stephens, in 2016.

Educationally, the period witnessed the closing of many of the small, rural one- and two-room schoolhouses from the early twentieth century due to annexation and consolidation efforts. In 1961, Fannett and Hamshire combined, forming the Hamshire-Fannett Independent School District (ISD). The district encompassed the two communities, along with LaBelle and parts of Cheek. Nome, China, and Sour Lake in Hardin County also consolidated in the 1960s, forming the Hardin-Jefferson ISD. As a result of the consolidation, the newly formed school districts built new, larger schools, including the Hamshire-Fannett High School in Hamshire at 12702 2nd Street. In the combined Port Neches-Groves district, the population boom in the two communities in the postwar period resulted in massive expansion. Among the eight new schools, athletic fields and facilities, and administration building constructed in the two cities was the extant Port Neches-Groves High School at 1401 Merriman Street in Port Neches in 1953 (Figure 122).[55] The older high school served as the junior high school before it was demolished (its concrete slab is extant on the rubber plant property).[56] Other new school buildings include Hillcrest Elementary School in Nederland, Van Buren Elementary School in Groves, and Central Middle School in Nederland (Figure 123).

## Parks and Open Space

While cities in eastern Jefferson County created small public parks in this period, environmental conservation and protection efforts led to the development of large-scale parks, preserves, and refuges in the county. The woods in northern Jefferson County, eyed by conservationists as early as the 1930s, became part of the larger, noncontiguous 113,114-acre Big Thicket National Preserve in 1974.[57] Spread across seven Texas counties, the Big Thicket National Preserve runs along Pine Island Bayou along the county's northern border, as well at its confluence with the Neches River north of Beaumont.

In southern Jefferson County, for roughly three decades following the war, land-use patterns in the marshlands remained largely unchanged. Rice farmers and ranchers continued to work the land, outdoorspeople and hunting clubs maintained leases for hunting and fishing (Figure 124). The marshlands were changing, though, affected by years of rice farmers draining and altering fields, the construction of the Intracoastal Canal, and industrial encroachment that saw some marshland filled for road construction and other development. Consequently, the marsh's birds and animals suffered, including the at-the-time rare and endangered red wolf, American alligator, and river otter.[58] Early conservation efforts led to the creation of the John David Murphree Wildlife Management Area. Texas Parks and Wildlife created the WMA in 1958 from 8,200 acres purchased from the McFaddin family trust. In addition to overseeing the conservation and protection of the wetlands and waterfowl in the WMA, TPW also managed waterfowl and alligator hunts, fishing, and mineral development for oil and gas.[59] The creation of the J. D. Murphree WMA stirred little opposition, largely because TPW did not ban hunting or fishing. The story changed, though, when the state, and later the federal government, started

targeting additional lands for purchase that would limit or ban hunting. Despite organized opposition from some prominent Jefferson County outdoorsmen and hunting clubs, Sea Rim State Park, McFaddin National Wildlife Refuge (NWR), and Texas Point NWR opened in the 1970s and 1980s. TPW opened Sea Rim State Park in 1977 on 14,000 acres purchased from Planet Oil and Mineral Corporation and Horizon Sales Corporation; the oil companies had purchased the land from the McFaddin family trust in 1969. Under the authority of the Migratory Bird Conservation Commission, an arm of the U. S. Fish and Wildlife Service, Texas Point NWR opened in 1979 and McFaddin NWR opened in 1980 (Figure 125). The creation of the NWRs put roughly 67,000 acres, many of them former ranch lands, under the protection of the USFWS. Hunting was banned at Sea Rim State Park but permitted under strict regulations at the NWRs. While the creation of the parks and refuges ultimately led to the demise of the private hunting clubs in Jefferson County, the continued expansion and creation of the parks and refuges in the 1980s and 1990s placed nearly the entirety of the southern coastline in Jefferson County under protection.

Figure 124. A hunter with Canada geese and Mallard ducks on McFaddin Ranch before it was sold and eventually incorporated into one of the protected state parks and national wildlife refuges that were established in the 1970s and 1980s. Sawyer, *A Hundred Years of Texas Waterfowl Hunting: The Decoys, Guides, Clubs, and Places: 1870s to 1970s* (College Station, Texas: Texas A&M University Press, 2012).

Figure 125. As a nationally protected wildlife refuge, the Department of the Interior has worked to preserve and conserve the natural environment at McFaddin Beach NWR. One of the latest projects focuses on beach and dune restoration. Source: "DOI Texas TIG Restoration Projects," Deepwater Horizon Response & Restoration, U. S. Department of the Interior, October 2019, https://www.doi.gov/deepwaterhorizon/doi-texas-tig-restoration-projects-1.

**Sabine Pass Battleground State Historic Site**

During this time period, the Texas Parks and Wildlife Department (TPWD) purchased the Sabine Pass Battleground site in 1971. Acquired from the Kountze County Trust, the roughly 55-acre site officially became a state historic site.[60] TPWD oversaw erosion control projects, as well as the construction of shade structures and picnic facilities at the site. In 2008, the Texas Historical Commission (THC) gained control of the site (Figure 126). Home to the 1936 Dick Dowling monument, the park considered taking Houston's Dowling statue after the city removed it from Hermann Park in June 2020 following racial protests across the country. Opposed by Port Arthur's mayor, the THC ultimately tabled a vote on the statue's relocation to the Port Arthur-located park.

Figure 126. In the postwar era, Sabine Pass Battleground site became state-owned and an official historic site. The Texas Historical Commission gained control of the park from Texas Parks and Wildlife Department in 2008. The interpretive pavilion is one of the improvements made to the site upon becoming state-owned. ## CONCLUSION

Due to the county's lengthy history of hurricanes, a number of historic resources have been lost over the centuries. For such a reason, it is important to identify and document extant historic-age resources. The themes and events in this context aim to place extant historic-age resources into the historical context and development of Jefferson County. The context establishes some of the most significant themes in the development of the county (outside the municipalities of Beaumont and Port Arthur), including rice, oil, and transportation networks. The goal of the context is to help identify and understand historic-age resources and help to tell the history of Jefferson County.

# Historic Resources Survey Report

## EXECUTIVE SUMMARY

In March 2021, the Jefferson County Historical Commission (CHC) commissioned HHM & Associates, Inc. of Austin, Texas, to complete a historic resources survey plan, historic resources survey, and historic preservation plan for the county. This survey report presents the findings of the historic resources survey.

HHM completed survey efforts in Jefferson County between April and September 2022. Surveyors followed the Survey Methodology and Survey Plan approved at the outset of the project. Based on this guidance, HHM documented some historic-age resources as individual parcels of land and others (like postwar subdivisions) as collective groupings of parcels. Prior to field survey, HHM conducted a desktop survey using Jefferson Central Appraisal District (CAD) data and historic aerial photos to flag parcels/groupings likely to include extant resources built within the historic period (by 1978). During field survey in Jefferson County, HHM visited all flagged parcels/groupings. For 478 flagged parcels, no historic-age resources were visible, so no further documentation was gathered, and documentation stopped at the desktop level. If resources built by 1978 were visible, HHM collected windshield-level field documentation. Individual resources and collective groupings of resources were evaluated in the field for eligibility for listing in the National Register of Historic Places (NRHP)—informed by the historic context and associated research completed by HHM in January 2022. Potentially eligible resources were surveyed at the reconnaissance level. HHM also made note of parcels where future right-of-entry (ROE) is needed to evaluate NRHP eligibility. In total, HHM documented **3,415 records** during fieldwork. Table i summarizes the survey level and scale of the documented resources. Among these resources, HHM **recommends NRHP eligibility for 90 individual resources and 14 historic districts**, as detailed in Table ii. Eligibility recommendations for every historic-age resource identified in the survey are presented in the Inventory in Appendix C. All survey work and evaluations were made by professionals meeting the *Secretary of the Interior's Professional Qualification Standards* (36 CFR 61). The geographic boundaries of the survey included all of Jefferson County, exempting the municipalities of Beaumont and Port Arthur, as depicted in Figure i.

*Table i. Counts of the number of records documented in the field for each of the survey levels and scales.*

| Survey Level | Individual Scale | Collective Scale | Total |
|---|---|---|---|
| Desktop* | 478 | 0 | 478 |
| Windshield (pre-1979 resource) | 2,409 | 345 | 2,754 |
| Reconnaissance (individually eligible pre-1979 resource) | 90 | 0 | 90 |
| Future Windshield** | 93 | 0 | 93 |
| **Total** | 3,070 | 345 | **3,415** |

**Includes parcels with post-1978 resources, without buildings, or without visibility where ROE is not justified.*

***Includes parcels needing ROE where historic-age resources are likely but not accessible/visible from the right-of-way (ROW).*

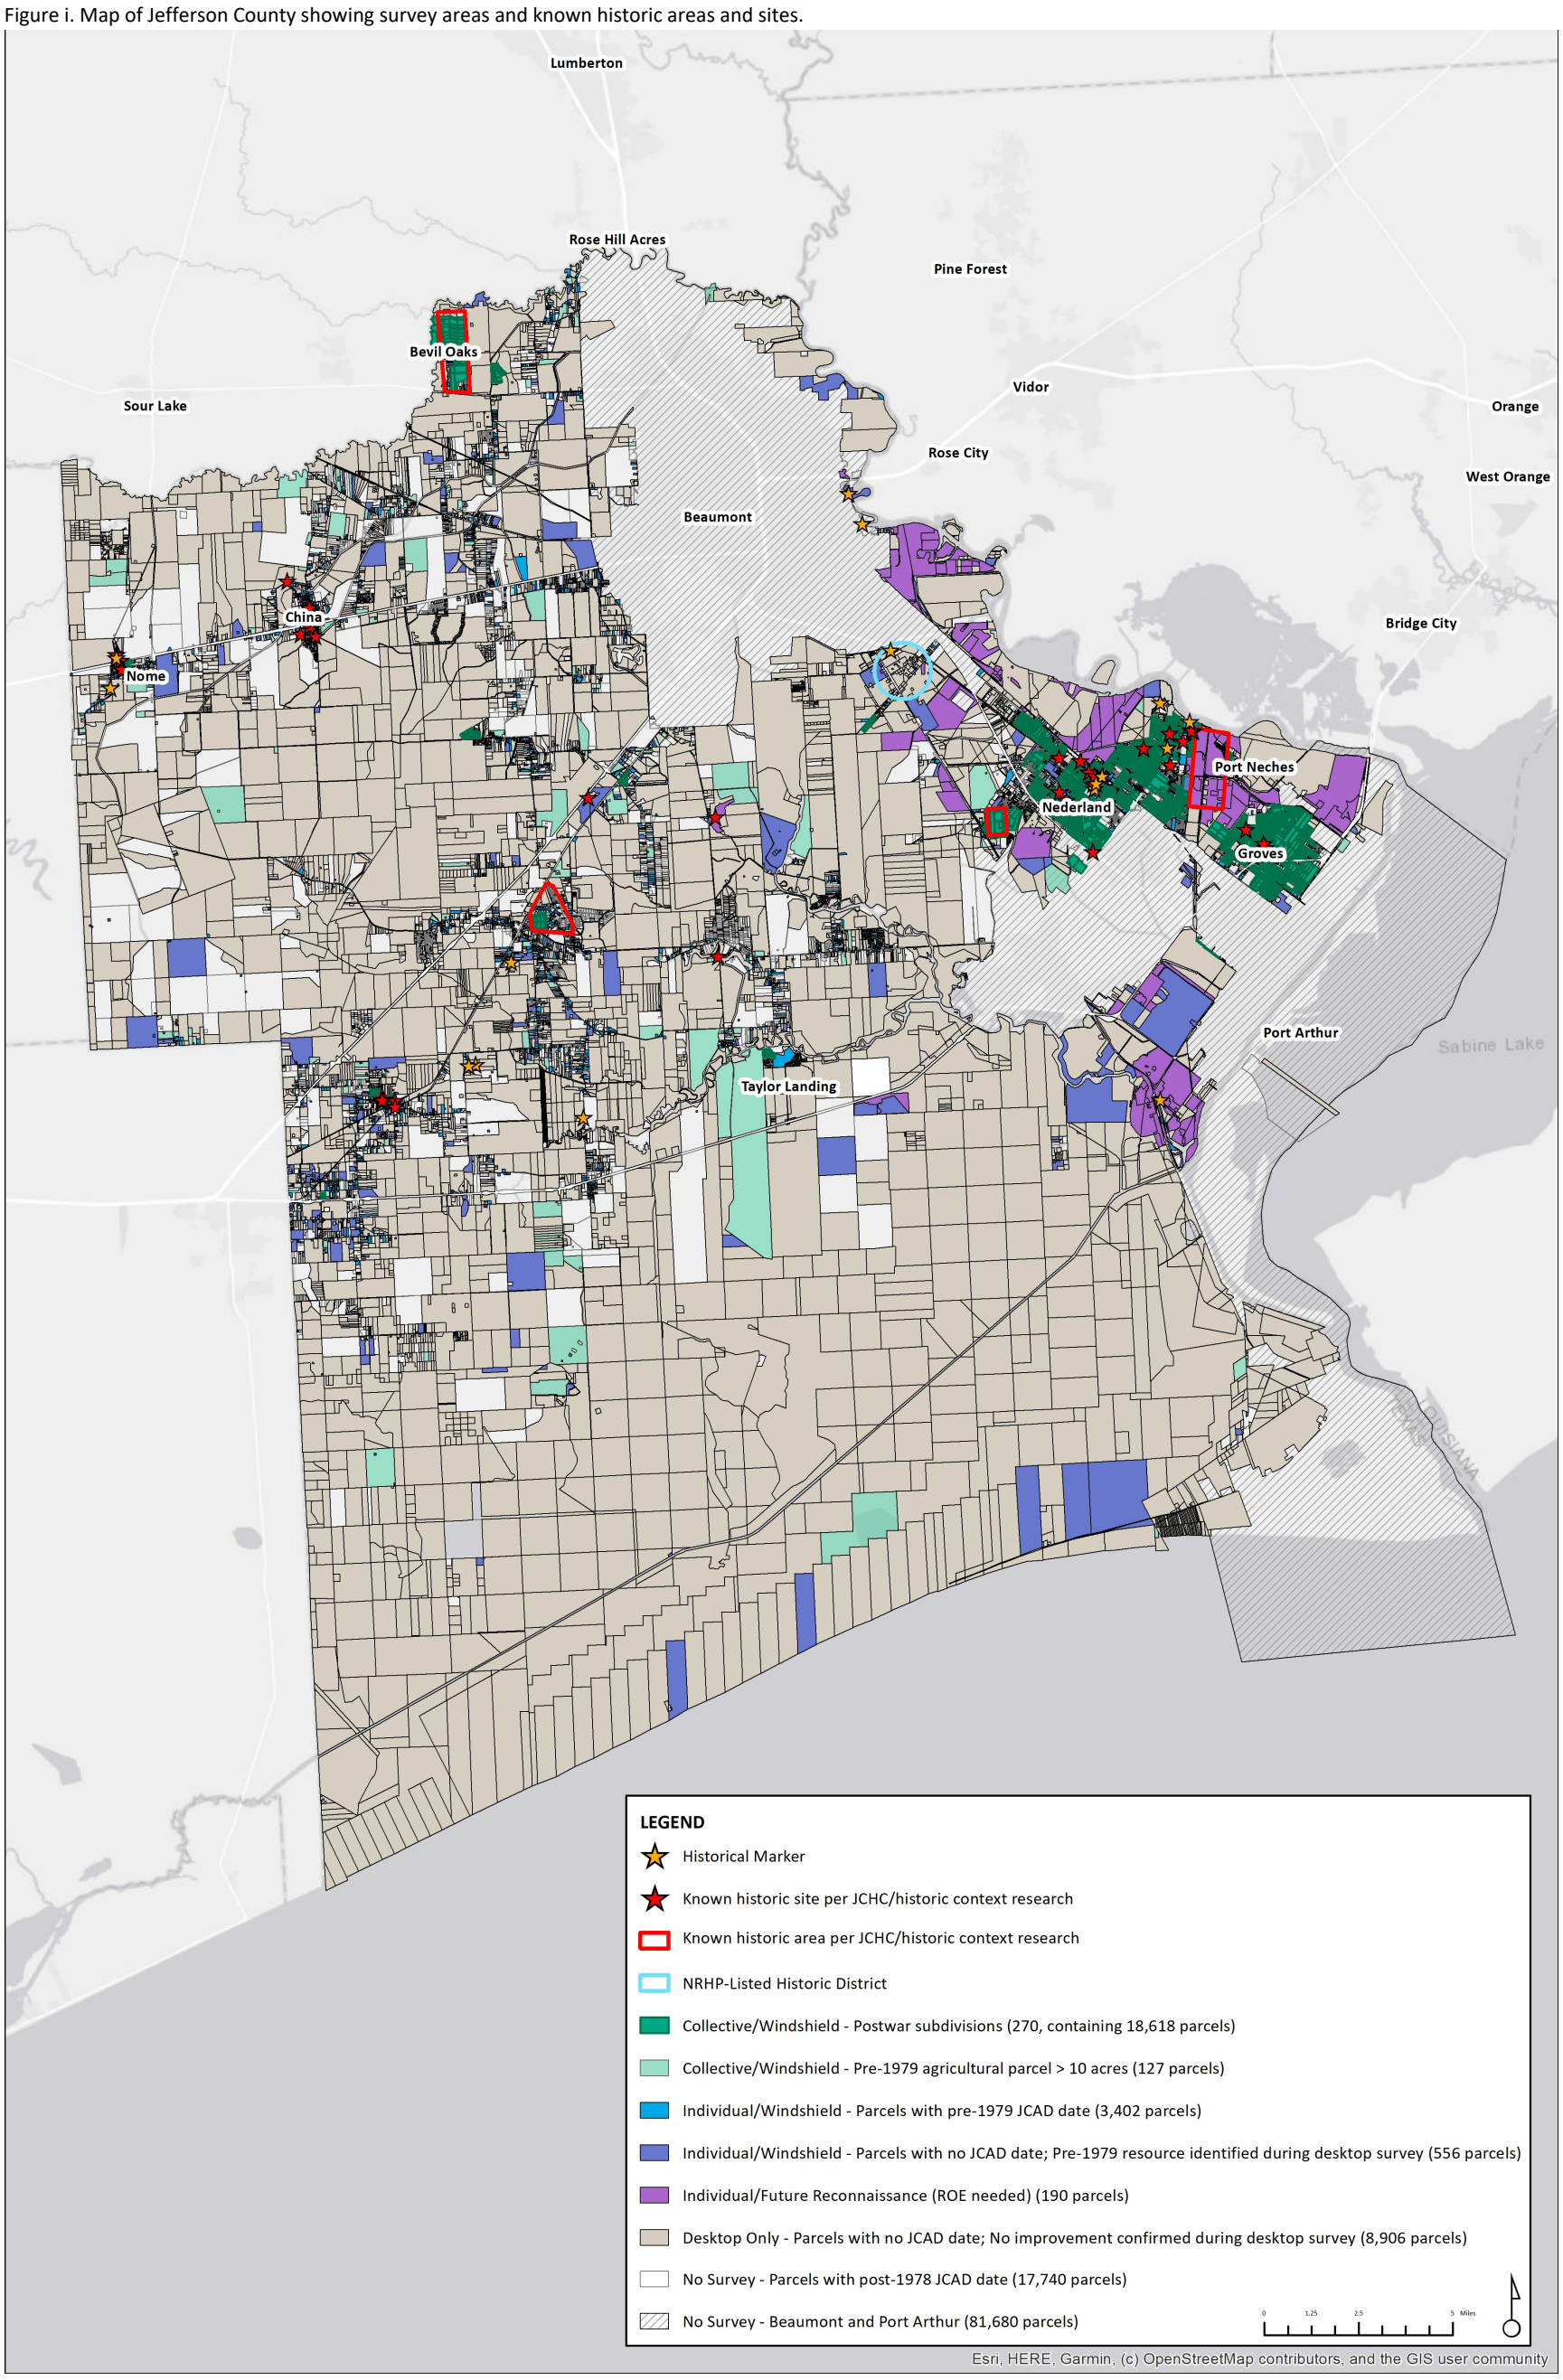

*Table ii. NRHP eligibility counts by survey scale for non-Desktop-level survey.*

| NRHP Eligibility Recommendation | Individual Scale | Collective Scale | Total |
|---|---|---|---|
| Not Eligible | 2,324 | 324 | 2,648 |
| Individually Eligible | 89 | 0 | 89 |
| Eligible as/Within Historic District | 42 | 12 | 54 |
| Individually Eligible and Within Eligible District | 1 | 0 | 1 |
| Intensive Survey Needed | 43 | 9 | 52 |
| ROE Needed | 89 | 0 | 89 |
| ROE and Intensive Survey Needed | 4 | 0 | 4 |
| **Total** | 2,592 | 345 | **2,937*** |

**This count does not include the 478 resources surveyed only at the desktop level in the field.*

Overall, the survey report aims to provide Jefferson County with information on their extant historic-age resources. This information also helped inform the Historic Preservation Plan that HHM developed for the county. Together, the two documents will provide guidance for future management and planning for the identified historic-age resources in Jefferson County.

Figure i. Map of Jefferson County showing survey areas and known historic areas and sites.

# INTRODUCTION

This project is funded in part by a grant from the National Park Service's Emergency Supplemental Historic Preservation Fund and managed and administered by the Texas Historical Commission (THC). Through the grant, the THC aims to fund projects that promote preservation planning and the documentation and rehabilitation of historic resources in areas affected by Hurricane Harvey. As part of this effort, the THC awarded the Jefferson County Historical Commission a grant to prepare a historic resources survey plan, historic resources survey, and a historic preservation plan.

Jefferson County has a long history of damage from hurricanes and floods, including Hurricane Harvey in 2017 and Hurricanes Ike (2008) and Rita (2005). Hurricane Harvey alone caused an estimated $2.2 billion of damage, flooding over 15,000 homes and wiping out critical infrastructure across Jefferson County.[1] Future climate projections anticipate more frequent, stronger storms and floods in coming decades. Though hurricane damage in 2017 was widespread across the county, this project focuses on the areas outside of Beaumont and Port Arthur, where historic preservation efforts have been limited. Historically, much of the preservation work in the county has focused on Beaumont and Port Arthur, both designated Certified Local Governments. As a result, historic resources in the county's smaller cities and unincorporated and rural areas have largely gone undocumented, leaving them in danger of being lost. The goals of this project are to document as many above-ground historic-age properties in these areas of Jefferson County as possible, to assess the damage of past storms, and to integrate this information into a preservation plan that will help Jefferson County respond to future storms' impact on historic resources.

# SURVEY METHODOLOGY AND SURVEY PLAN SUMMARY

Prior to any fieldwork, HHM completed a Survey Methodology and Survey Plan to ensure fieldwork was conducted efficiently and accurately. These documents laid out the survey boundaries (see Figure i) and parameters for determining survey scale – if a parcel should be surveyed individually or collectively. The parameters presented in Table 1 reflect the Survey Methodology and Survey Plan, as refined through consultation with the Jefferson CHC and THC after the first month of survey work to address issues encountered in the field.

*Table 1. Parameters used for determining scale of survey - whether a parcel will be surveyed individually or as part of a collective grouping.*

| Individual Survey | Collective Survey |
|---|---|
| Cutoff date of 1978<br>Parcels with no CAD date included<br>**Individually eligible parcels in residential subdivisions<br>Agricultural complexes ≥ 10 acres with resources built by 1978 excluded<br>Mobile and manufactured homes to be excluded | Cutoff date of 1978<br>Parcels with no CAD date included<br>*All Postwar residential subdivisions<br>**Subdivisions with mostly Postwar resources<br>Agricultural complexes ≥ 10 acres with resources built by 1978<br>Mobile home parks included |

**** As modified per May 3, 2022 meeting among HHM, JCHC, and the THC after first round of field survey. Prior to the meeting only postwar subdivisions with 10 or more parcels were surveyed collectively.***

***** As modified per May 26, 2022 email among HHM, JCHC, and the THC after second round of field survey.***

[1] Jefferson County Historical Commission, Request for Statements of Qualification RFQ 20-041/YS Historic Preservation Professional Services for Historic Resources Survey Plan, Historic Resources Survey, and Historic Preservation Plan, September 8, 2020, p. 21.

The Survey Methodology and Survey Plan also identified the following levels of survey and laid out the level of documentation to be recorded for each level. Table 2 presents the levels of survey and documentation level as presented in the documents and refined through survey work.

*Table 2. Levels of survey and documentation level for different parcel types.*

| Survey Level | Survey Scale | Description | Documentation Data |
|---|---|---|---|
| Desktop | Individual | Parcels with post-1978 JCAD construction date | Fields of Data:<br>• CAD parcel ID(s)<br>• Address<br>• Prior documentation/designations<br>• Construction date(s)<br>• History notes |
| | Individual | Parcels with no JCAD construction date; no improvement on parcels confirmed during desktop survey | |
| Windshield | Individual | Parcels with pre-1979 JCAD construction date | Fields of Data:<br>• All desktop-level fields*<br>• NRHP eligibility recommendation<br>  ○ Individually Eligible/Eligible as a District<br>  ○ Not eligible<br>  ○ Within district eligible for NRHP<br>• Justification for recommendation<br>  ○ Intensive survey needed<br>  ○ ROE needed<br>  ○ Lacks integrity<br>  ○ Lacks known significance<br>  ○ Possesses integrity and significance<br>Photography:<br>• One photograph of each individual resource OR two typical photographs of collective survey area |
| | Individual | Parcels with no JCAD construction date; likely contain resources constructed pre-1979 identified during desktop survey | |
| | Collective | Pre-1979 agricultural parcels 10 acres or larger | |
| | Collective | Subdivisions | |
| Reconnaissance | Individual | Parcels eligible or potentially eligible for the NRHP | Fields of Data:<br>• All desktop- and windshield-level fields<br>• Historic use<br>• Current use<br>• Property type<br>• Stylistic influences<br>• Integrity<br>• NR criteria<br>• NR Area(s) of significance<br>• NR Period(s) of significance<br>Photography:<br>• Two photographs of each individual resource, including outbuildings |
| Future Windshield | Individual | Parcels requiring ROE. Identified during desktop survey and fieldwork. | Fields of Data:<br>• All desktop-level fields<br>• Justification for recommendation**<br>  ○ ROE needed<br>Photography:<br>• No photographs |

**For Windshield-level survey of collective groupings, a range of construction dates was documented. No addresses or CAD parcel ID numbers were documented for collective groupings.*

***For these resources, HHM made no NRHP eligibility recommendations since survey was not possible.*

The documents also established and outlined the tasks needed for survey preparation, fieldwork, and in support of this survey report. These steps are summarized below.

- **Data and Database Preparation** – HHM obtained and prepared data, including GIS-compatible data from the Jefferson Central Appraisal District (CAD) and data on previously identified and designated resources, in support of survey efforts. During this task, HHM:
    - Cropped CAD data to include only parcels within survey boundaries
    - Edited CAD data down to relevant fields, including parcel ID number, address, owner information, and construction date[2]
    - Linked CAD data to data about previously identified historic resources obtained from the Jefferson CHC, THC, TxDOT, public input, and the historic context prepared in January 2022
    - Uploaded the revised data set to HHM's GIS-compatible database
- **Desktop Survey –** The aim of the desktop survey was to ensure that all historic-age resources were flagged for survey. From a computer desktop using Google Street View, Google Earth aerials, and historic maps and aerials, HHM surveyed every entry in the database to verify if the parcel likely still contained a historic-age resource. This survey also identified and flagged parcels not included in the data obtained and prepared in the previous step for windshield survey. The survey also identified parcels that need right-of-entry.
- **Field Survey –** Using the prepopulated database, field teams documented the resources flagged for survey during the Desktop survey. All survey work was done from the right-of-way. HHM also surveyed historic-age resources that had not been flagged during the Desktop survey that were found during fieldwork. Resources prepopulated in the database appear as polygons in the maps in Appendix B. Individually eligible resources and resources identified in the field that were not flagged for survey, and therefore not prepopulated in the database, appear as points in the maps in Appendix B.
- **Data Analysis –** At the close of the field survey, HHM analyzed all survey data for completeness and consistency. The team also held several roundtable discussions to discuss eligibility recommendations.

The entire Survey Methodology can be downloaded via the following link:
https://dmoore.egnyte.com/dl/xPnYkGnHby

The entire Survey Plan can be downloaded via the following link:
https://dmoore.egnyte.com/dl/P6htueSZZN

# STAKEHOLDER INPUT SUMMARY

The survey results compiled in this report reflect an ongoing effort to communicate with public stakeholders. Public input shaped HHM's survey efforts at all levels – from the survey methodology to the survey plan, field investigations, eligibility evaluations, and preservation planning investigations. Stakeholder input outreach efforts and responses are summarized below:

[2] HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed as Beaumont in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

- In the third quarter of 2021, HHM completed the Draft Research Design and Public Input Plan (Task 2, delivered on July 1, 2021), as well as the Final (Task 3, delivered on July 14, 2021). These deliverables set forth the methodology for all research, fieldwork, and public input to be completed in following tasks. Representatives from the Jefferson County Certified Local Government (CLG), County Historical Commission (CHC), and Texas Historical Commission (THC) reviewed and commented on the Draft, and their input was incorporated into the Final deliverable.
- As part of the Public Input Plan, HHM developed a shared online Google Form soliciting stakeholder contact information to help distribute project outreach and notifications for future tasks. The Jefferson County CLG helped distribute links to the form to public stakeholders including CHC members, historic property owners, and relevant municipal and county employees and officials.
    - In the fourth quarter of 2021, HHM conducted research and analysis to prepare the Draft Historic Context, completed in the first quarter of 2022 (January 14, 2022). The Draft was shared with the CLG, CHC, and THC for review and comment. The context then was revised to incorporate these comments.
- Also in the first quarter of 2021, HHM developed a Draft Survey Plan targeting specific parcels of land for field investigations based on the likelihood that they included extant historic resources. The Draft was delivered to the CLG, CHC, and THC for review and distribution in preparation for the First Stakeholder Meetings.
- Consistent with the Final Public Involvement Plan, HHM held the First Public Meetings during the second quarter of 2022 (April 12, 2022). This two-part series of meetings discussed revisions to the Draft Survey Plan as well as initial brainstorming for the Historic Preservation Plan. In response to comments during the meeting and via follow-up emails, HHM revised the Survey Plan and submitted a final version (May 2, 2022; further revised May 25, 2022).
- The Final Survey Plan, including all public feedback, informed all field survey efforts during the second and third quarters of 2022 (April 2022 through August 2022). At the outset of the survey, the CLG issued a press release and notified the sheriff and municipal police about the project. HHM routinely communicated with the CLG, CHC, and THC throughout the survey to ask questions and refine the survey methodology. HHM surveyors also routinely talked with property owners encountered in the field and incorporated their knowledge into survey notes.
- In the fourth quarter of 2022, the Draft Historic Resources Survey Report was shared with the CLG, CHC, and THC for review and comment (November 10, 2022). The survey report was revised to incorporate these comments.
- In the second quarter of 2023, HHM developed a Draft Historic Preservation Plan that integrated input from stakeholders received at the first public meeting (April 2022) and a second public meeting (April 2023). The Draft was shared with the CLG, CHC, and THC (July 17, 2023). The Historic Preservation Plan then was revised to incorporate and address these comments.

# SURVEY FINDINGS

The field team recorded 3,415 records in the database between April and September 2022. This included individual parcels and collective groupings surveyed at the Desktop, Windshield, and Reconnaissance levels (see Table 3). An inventory of all resources surveyed at the windshield and reconnaissance level can be found in Appendices C and D. Appendix E contains the CSV file of the Desktop-level records. Maps in Appendix B show the location of all surveyed resources.

*Table 3. Counts of the number of records documented in the field for each of the survey levels and scales.*

| Survey Level | Individual Scale | Collective Scale | Total |
|---|---|---|---|
| Desktop* | 478 | 0 | 478 |
| Windshield (pre-1979 resource) | 2,409 | 345 | 2,754 |
| Reconnaissance (individually eligible pre-1979 resource) | 90 | 0 | 90 |
| Future Windshield** | 93 | 0 | 93 |
| **Total** | 3,070 | 345 | **3,415** |

**Includes parcels with pre-1978 resources, without buildings, or without visibility where ROE is not justified.*

***Includes parcels needing ROEy where historic-age resources are likely but not accessible/visible from the ROW.*

## GENERAL TRENDS

The resources surveyed at the individual scale at the windshield and reconnaissance levels date from around 1850 to 1978. The majority of individual resources surveyed date to the 1960s. Figure 1 below summarizes the dates of construction of the surveyed individual resources. Based on field observations—as property type was not recorded at the windshield level—the majority of resources were residential. Surveyors also recorded commercial, industrial, agricultural, educational, and religious properties. Resources were located across the county—outside the city limits of Beaumont and Port Arthur—though the majority were documented in Mid-County, in the cities of Nederland, Port Neches, and Groves. Table 4 summarizes the locations of the surveyed resources, also illustrated in the Maps in Appendix B.

*Figure 1. Chart of surveyed buildings by decade built.*

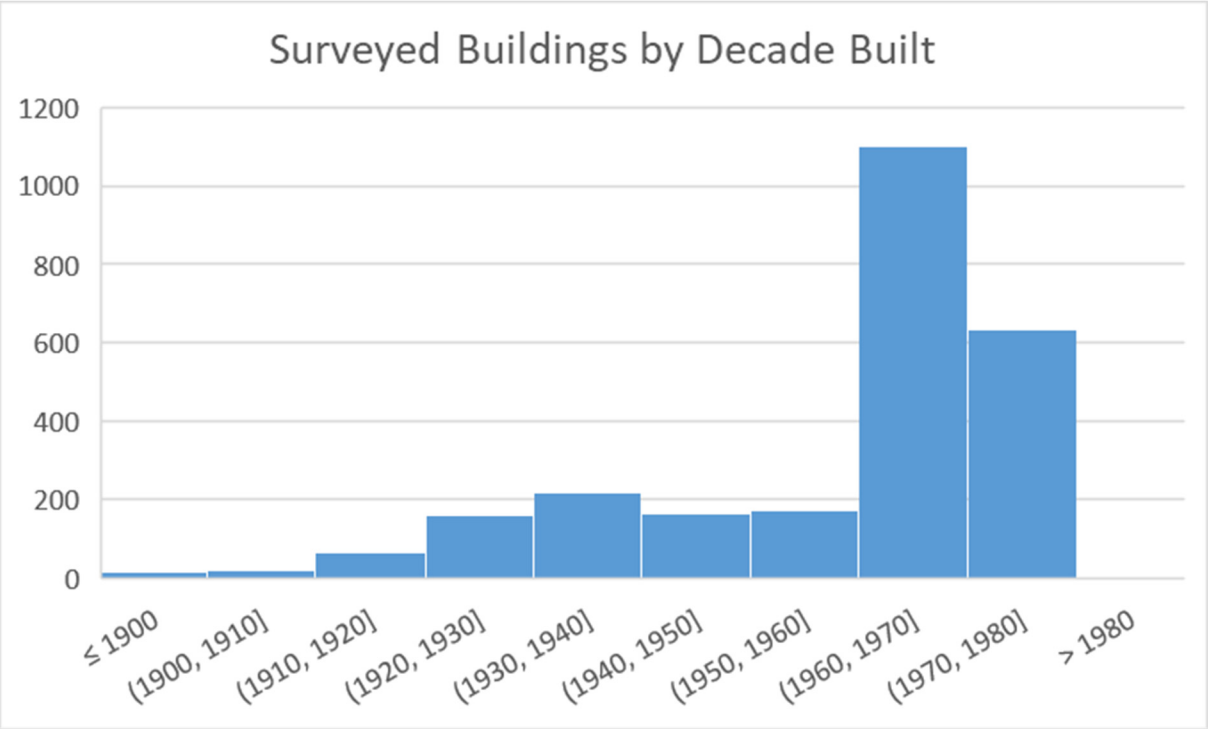

*Table 4. Counts by city/unincorporated area location/vicinity of the number of records surveyed individually at the windshield and reconnaissance levels.*

| City/Unincorporated Area/Vicinity* | Counts |
|---|---|
| Nederland | 573 |
| Beaumont | 365 |
| Fannett | 306 |
| Port Neches | 268 |
| Hamshire | 254 |
| Winnie | 212 |
| Cheek | 157 |
| China | 152 |
| Groves | 122 |
| LaBelle | 77 |
| Nome | 63 |
| Bevil Oaks | 21 |
| Port Arthur | 8 |
| Taylor Landing | 8 |
| Viterbo | 6 |
| **Total** | **2,592** |

** HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated areas are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.*

The majority of collectively surveyed resources include suburbs in Mid-County cities of Nederland, Port Neches, and Groves. Most of these subdivisions were platted during the post-World War II era. Several subdivisions were platted prior to World War II, though they were largely developed in the post-war period. Many of these subdivisions include a cohesive collection of similar houses, built over the same period of time, in the 1960s and 1970s. Other subdivisions, though, display a variety of house forms and styles, reflective of a longer period of development. This is particularly true of pre-1945 subdivisions in Nederland, Port Neches, and Groves. These subdivisions include a variety of houses ranging from the 1920s and 1930s through the 1960s and 1970s. Longer periods of development were also typical in the smaller cities outside Mid-County. In many instances, the period of development in these subdivisions extended into the 1990s and 2000s. In addition to the variety of house forms and styles in these subdivisions, lot sizes also varied greatly.

In addition to residential subdivisions, cemeteries, parks, golf courses, and large agricultural complexes were also surveyed at the collective scale and assessed as potential historic districts.

*Table 5. Counts by city location of the number of records surveyed collectively at the windshield level.*

| City/Unincorporated Area/Vicinity* | Counts |
|---|---|
| Nederland | 110 |
| Groves | 101 |
| Port Neches | 78 |
| Beaumont | 16 |
| China | 7 |
| Nome | 6 |
| Hamshire | 5 |
| Bevil Oaks | 5 |
| Viterbo | 4 |
| Fannett | 4 |
| Port Arthur | 4 |
| Cheek | 2 |
| Winnie | 1 |
| LaBelle | 1 |
| Taylor Landing | 1 |
| **Total** | **345** |

** HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated areas are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.*

## ELIGIBILITY RECOMMENDATIONS

This section provides a summary of National Register of Historic Places (NRHP) eligibility recommendations for individual resources and historic districts (Table 6). To be eligible for listing in the NRHP, a resource, either on an individual basis or collectively as a historic district, must be at least 50 years old, possess significance under at least one of the NRHP Criteria, and retain sufficient integrity to convey that significance. See Appendix A for more information on NRHP Criteria and Integrity Thresholds for eligibility.[3] Consultation with the Texas Historical Commission is highly recommended before proceeding with the NRHP nomination process.

*Table 6. NRHP eligibility counts by survey scale.*

| NRHP Eligibility Recommendation | Individual Scale | Collective Scale | Total |
|---|---|---|---|
| Not Eligible | 2,324 | 324 | 2,648 |
| Individually Eligible | 89 | 0 | 89 |
| Eligible as/Within Historic District | 42 | 12 | 54 |
| Individually Eligible and Within Eligible District | 1 | 0 | 1 |
| Intensive Survey Needed | 43 | 9 | 52 |
| ROE Needed | 89 | 0 | 89 |
| ROE and Intensive Survey Needed | 4 | 0 | 4 |
| **Total** | 2,592 | 345 | **2,937** |

Recommendations are based primarily on fieldwork observations, supported by post-fieldwork analysis. Because the priority of the project was to survey as many resources as possible, the scope of work developed by the THC and Jefferson County focused on survey, deferring property-specific research. Therefore, eligibility recommendations are based on known and easily identifiable significance, applying the historic context prepared for the project as a framework. Many resources are recommended eligible under only one Criteria – Criterion C for Architecture—though a number of them may meet other NR

[3] Because the survey cutoff date was 1978, HHM assessed all surveyed resources as historic-age. There are three resources built after 1973 that are recommended eligible for the NRHP. Because none of these resources meet Criteria Consideration G: Properties that Have Achieved Significance Within the Past 50 Years, they cannot be listed until they meet the 50-year mark.

Criteria than identified by HHM. Due to the minimal amount of property-specific research completed under this survey's scope, recommendations are subject to change if additional research reveals relevant information that identifies historical significance or impacts the integrity of a resource. Intensive survey and research are recommended if the physical characteristics of a property suggest a link to a significant historic theme, but additional research would be needed to substantiate the link.

## Individually Eligible

Of the 2,592 individually surveyed resources, HHM identified **90** that are recommended eligible for the National Register of Historic Places. Single-family residences account for the majority of recommended eligible resources, though churches, stores, water towers, offices, rice dryers, and a train depot are among the various property types recommended eligible. Among the 90 recommended eligible resources, 13 are recommended eligible under a multiple property listing—a group of properties related to one or several historic contexts.[4] Under a Post-War Public Buildings of Jefferson County historic context, HHM recommended public buildings—schools, a post office, a fire station, and a city hall—built between 1948 and 1966 as eligible. Table 7 breaks down the type and number of each resource recommended individually eligible for the NRHP.

*Table 7. Counts by Property Type and Form of Recommended Eligible Resources.*

| Property Type/Form | Counts |
|---|---|
| Single-family house | 41 |
| School | 13 |
| Church | 8 |
| Water tower | 6 |
| Store | 4 |
| Agricultural complex | 2 |
| Rice dryer | 2 |
| Telephone exchange | 1 |
| Museum | 1 |
| Jail | 1 |
| Funeral home | 1 |
| Gymnasium | 1 |
| Post office | 1 |
| Cistern | 1 |
| Bank, City Hall | 1 |
| Office | 1 |
| Fire station | 1 |
| Gas station | 1 |
| Library | 1 |
| Train depot | 1 |
| Duplex house | 1 |
| **Total** | **90** |

The recommended individually eligible resources date from around 1899 to 1978.[5] The majority of recommended eligible resources date to the 1920s and 1930s. Table 8 breaks down the dates of construction by decade for the recommended eligible resources.

[4] More information on Multiple Property NR nominations can be found online: https://www.nps.gov/subjects/nationalregister/upload/NRB16B-Complete.pdf.

[5] Because the survey cutoff date was 1978, HHM assessed all surveyed resources as historic-age. There are three resources built between 1973 and 1978 that are recommended eligible for the NRHP. Because none of these resources meet Criteria Consideration G: Properties that Have Achieved Significance Within the Past 50 Years, they cannot be listed until they meet the 50-year mark.

*Table 8. Counts by Decade of Construction of Recommended Eligible Resources.*

| Decade of Construction | Counts |
|---|---|
| 1890-1899 | 1 |
| 1900-1909 | 4 |
| 1910-1919 | 8 |
| 1920-1929 | 22 |
| 1930-1939 | 20 |
| 1940-1949 | 7 |
| 1950-1959 | 12 |
| 1960-1969 | 12 |
| 1970-1978 | 4 |
| **Total** | **90** |

The recommended eligible resources are dispersed across the county, with a majority located in the Mid-County cities. Table 9 provides the number of recommended eligible resources in each city.

*Table 9. Counts by Location of Recommended Eligible Resources.*

| City/Unincorporated Area/Vicinity | Counts |
|---|---|
| Nederland | 21 |
| Port Neches | 17 |
| Groves | 17 |
| China | 10 |
| Beaumont | 8 |
| Nome | 5 |
| Cheek | 4 |
| Hamshire | 3 |
| Viterbo | 1 |
| Taylor Landing | 1 |
| Winnie | 1 |
| Port Arthur | 1 |
| Fannett | 1 |
| **Total** | **90** |

Survey forms in Appendix D provide additional detail on the recommended eligible properties, including property form, architectural styles, and historic and current uses. National Register criteria and integrity issues are also included in the forms.

## Right-Of-Entry (ROE) Needed

As established in the project's scope of work, HHM conducted all fieldwork from the public right-of-way (ROW) and did not go onto private property. As a result, surveyors encountered various accessibility issues. In some instances, visibility was sufficient for surveyors to make NR-eligibility recommendations, but photographic documentation was impaired and/or restricted due to vegetation, distance of resource from the ROW, traffic on roadway and lack of shoulder, and aggressive dogs. HHM surveyed these resources at the windshield level, making NR-eligibility recommendations, but did not take photographs, making note in the "Identification notes" field in the database why no photograph was taken.[6] In some instances, though, accessibility and visibility issues entirely prevented survey of the resource and no eligibility recommendation or photographs were possible. Issues preventing survey included:

- Vegetation,
- Private roads and driveways,
- Impassible dirt roads,
- Large parcels with resources located far from the ROW,

[6] Note that this field is not included in the Inventory, but this data is included in the GIS/CSV exports provided.

- High security of property, such as petrochemical complexes, and
- Parcel accessible only by water.

When no historic-age resource was visible from the ROW, HHM did not provide an NR eligibility recommendation and noted in the "Justification for NRHP recommendation" field in the database that ROE was needed. During post-survey processing and analysis, HHM went through these records to determine if requesting ROE was justified based on the probability of the parcel containing a historic-age resource. Using historic and current aerial images, CAD dates, construction dates, and property type trends of adjacent and nearby properties, HHM analyzed these parcels for potential historic-age resources to determine whether requesting ROE was justified. After this review, HHM determined that ROE should be requested for **93** parcels. These parcels are included in the Inventory in Appendix C. Maps in Appendix B identify the location of these properties.

Survey of these parcels, along with the 190 parcels identified as needing ROE during Desktop survey efforts, have been included as a recommendation for future survey efforts in the historic preservation plan prepared under Tasks 10-12.

## Eligible Historic Districts

In total, HHM identified and recommended **14** historic districts eligible for the National Register. They include residential subdivisions and neighborhoods, as well as cemeteries, parks, a golf course, and agricultural complexes. HHM assessed all 345 resources surveyed collectively, as well as clusters of individually surveyed resources for historic district eligibility. Of the 345 collective survey records, HHM recommends 12 historic districts. HHM also identified two eligible areas consisting of a cohesive collection of historic-age resources that were surveyed individually. For resources in these potential districts, NRHP recommendations are "Within district eligible for NRHP." HHM also provided Contributing and Noncontributing recommendations for these resources.[7] Table 10 lists all 14 recommended eligible historic districts. Maps in Appendix B show the locations of the eligible historic districts.

[7] Note that there are no resource or Contributing and Noncontributing counts for the recommended eligible historic districts surveyed at the collective scale due to the scope of the survey.

*Table 10. Recommended Eligible Historic Districts.*

| District Name | City/Unincorporated Area/ Vicinity | Year(s) of Construction | Survey Scale/No. Resources | | |
|---|---|---|---|---|---|
| Beaumont Country Club | Beaumont | 1906 – 1965 | Collective/NA | | |
| Broussard Cemetery | Hamshire | 1861 – 2021 | Collective/NA | | |
| College to Nederland | Nederland | 1925 – 1935 | Collective & Individually* | C | 10 |
| | | | | NC | 1 |
| | | | | Total | 11 |
| Collier's Ferry Park | Beaumont | 1750 - 1980 | Collective | | |
| Country Club Park Estates | Taylor Landing | | Collective | | |
| Downtown Nederland | Nederland | | Individually | C | 28 |
| | | | | NC | 2 |
| | | | | Total | 30 |
| Duplantis Farmstead | LaBelle | 1886 - 1920 | Individually | C | 2 |
| | | | | NC | 0 |
| | | | | Total | 2 |
| Greenlawn Memorial Park Cemetery | Groves | 1898 - 2020 | Collective/NA | | |
| Old Bluff Memorial Park Cemetery | Port Neches | 1868 - 2022 | Collective/NA | | |
| Pumping station | Beaumont | 1935-1973 | Collective/NA | | |
| River Front Park | Port Neches | 1920 | Collective/NA | | |
| River Oaks Ranchettes | Bevil Oaks | 1955-1975 | Collective/NA | | |
| Texas A & M AgriLife Research and Extension Center | Beaumont | 1930 - 1973 | Collective/NA | | |
| Wynnewood Estates | Groves | 1965-1970 | Collective/NA | | |

*Due to an internet accessibility issue, this subdivision was surveyed at both the individual and collective levels.

## Intensive-Level Survey Needed

### INDIVIDUAL RESOURCES

Due to the windshield-level focus established in the scope of work for this project, HHM did not perform in-depth property-specific research on individual resources. As a result, the historic significance of a property was not always easily identifiable. In cases where surveyors felt that a property may have significance but was not easily identifiable in the field, HHM recommended Intensive-Level Survey. Factors suggesting significance include the age of the resource, architectural style, property type and function, and/or location. Examples of resources recommended for future intensive-level survey include:

- Churches without architectural significance,
- Cemeteries lacking significance for design,
- Agricultural properties and resources suggesting association with trends in the historic context,
- Large properties with multiple buildings of unknown function and history, and
- Properties where public input suggested historical significance – either via public meetings and questionnaires or conversations with surveyors in the field.

For each of the properties identified in the field as needing Intensive-Level Survey, HHM performed rudimentary research using historic maps, aerials, and newspapers to try and establish significance. In some instances, significance was determined, though intensive-level survey with a focus on research is recommended in order to establish whether a property is eligible or not.

The **47 parcels** recommended for future intensive-level survey are included in the Inventory in Appendix C and shown in Maps in Appendix B. Intensive-level survey of these parcels were included as a recommendation for future survey efforts in the historic preservation plan prepared under Tasks 10-12.

### HISTORIC DISTRICTS

The field survey also identified six areas where intensive-level survey is recommended to assess historic district eligibility. Windshield-level survey findings of three subdivisions suggest the potential for one, or several, smaller historic districts within the larger subdivision. Issues including integrity of historic-age resources and non-historic-age infill render the entire subdivision not eligible, but the windshield survey noted smaller areas within that subdivision retained integrity. An intensive-level survey would identify potential historic districts by surveying all resources within the subdivisions individually and assigning contributing and noncontributing recommendations. The following subdivisions need intensive survey to assess the potential for smaller eligible historic districts within:

- Hillcrest 1 in Port Neches
- Rachford and Dearing in Groves
- Pecan Groves to Port Arthur in Groves

The windshield survey also noted the potential for a larger historic district made up of several smaller subdivisions with shared property types, architectural styles, and years of development in Groves. Intensive-level survey would identify potential historic districts by surveying all resources within the subdivisions individually and assigning contributing and noncontributing recommendations. The following subdivisions need intensive survey to assess the potential for a potential Groves Mid-Century Historic District:

- Griffing Court
- Griffing Estates 1
- Telstar
- Sylvan Courts

Intensive-level survey is also recommended for two areas identified through individual survey to assess for historic district eligibility. The resources in these areas share similar property types, architectural styles, and years of construction. In each area, survey observations suggest historic significance, though significance was not confirmed with the project's limited research scope. An intensive-level survey would provide the in-depth level of research needed to confirm significance for NRHP eligibility. The following areas need intensive survey to assess historic district eligibility:

- West side of 2000-2400 North Major Drive, Beaumont – potential significance based on landscape groves of trees
- 300 block Pine Street, Port Neches – potential significance based on age and type of housing and proximity to several industrial complexes

# APPENDIX A: NATIONAL REGISTER CRITERIA FOR EVALUATION

# APPENDIX A: NATIONAL REGISTER CRITERIA FOR EVALUATION

To be eligible for the NRHP, a historic property, either on an individual basis or collectively as a historic district, must possess significance under at least one of the National Register Criteria and retain sufficient integrity to convey that significance. The NR Criteria and Integrity Thresholds are discussed below.

## EVALUATING SIGNIFICANCE

### National Register Criteria

The National Register Criteria for Evaluation states that a resource must meet a 50-year age threshold and must derive significance from at least one of the following Criteria to be eligible for the NRHP:

- **Criterion A. Association with Important Historical Events or Trends:** The resource must be associated with events, trends, or patterns that have made a significant contribution to the broad patterns of history.
- **Criterion B. Association with Important Individuals of the Past**: The resource must be associated with the lives of significant persons who made important contributions to the history of a community, city, state, or the nation.
- **Criterion C. Physical Attributes, Design Qualities, Work of a Master:** The resource must embody the distinctive characteristics of a type, period, or method of construction, or that represents the work of a master, or possess high artistic values, or represents a significant and distinguishable entity whose components may lack individual distinction.
- **Criterion D. Research Potential:** The resource must have yielded, or may be likely to yield, information important in prehistory or history.

### National Register Criteria Considerations

The National Register Criteria for Evaluation states that certain kinds of resources typically are not considered for inclusion in the NRHP. Examples include churches, synagogues, and other religious properties; resources that have been moved or relocated; birthplaces and graves of famous persons; cemeteries, buildings, and structures that have been reconstructed; resources used to commemorate an event, trend, or individual of the past; and properties that do not meet the recommended 50-year age threshold. However, these properties can be eligible for listing if they meet certain conditions defined in the National Register Criteria for Evaluation as "Criteria Considerations." Resources that meet any of the Criteria Considerations must *also* meet at least one of the National Register Criteria (A, B, C, or D). The following is a list of normally excluded properties that may, under certain circumstances, be eligible for the NRHP:

- Criteria Consideration A: Religious Properties
- Criteria Consideration B: Moved Properties
- Criteria Consideration C: Birthplaces or Graves
- Criteria Consideration D: Cemeteries
- Criteria Consideration E: Reconstructed Properties
- Criteria Consideration F: Commemorative Properties
- Criteria Consideration G: Properties that Have Achieved Significance Within the Past 50 Years

# EVALUATING INTEGRITY

**"Integrity is the ability of a property to convey its significance."[1]**

Physical integrity is the baseline for eligibility. If a building has too many alterations, it is not recognizable as historic, and it cannot convey its historic character. Additionally, altered historic buildings can confuse public perceptions about how buildings actually looked and functioned in the past. Inappropriate alterations may hamper a building's ability to accurately document our history. At the same time, though, some alterations are necessary for buildings to remain in use and for historic districts to remain vibrant.

**How do we decide when alterations are so severe that they compromise a building's potential eligibility for historic designation?**

**Nationwide best practices for evaluation of integrity generally follow the framework established by *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*.[2]**

The National Register bulletin presents seven aspects that define integrity in various combinations. These aspects of integrity are defined below.

## Seven Aspects of Integrity as defined by the National Register

The National Register Criteria recognize seven aspects that define integrity, in various combinations. These aspects of integrity are defined below in Table A1. Examples of common alterations that affect each aspect of integrity are also listed in the table.

**All alterations are not considered equally: compatibly designed alterations do not impair integrity, and alterations may gain significance in their own right when they become 50 years old.**

***Table A1**. The seven aspects of integrity: definitions and common examples of alterations.*

| Aspect | Definition | Individual Resource Examples | Historic District Examples |
|---|---|---|---|
| ***Location*** | The place where the historic property was constructed or the place where the historical event occurred. | Relocation | Relocation of majority of resources within |
| ***Design*** | The combination of elements that creates the form, plan, space, structure, and style of a property. | Additions visible from public view | Altered layout of streets or overall subdivision plat |
| | | Changed roof form or pitch | |
| | | Enclosed or changed size of openings | |
| ***Materials*** | The physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property. | Replacement or concealment of exterior wall materials | More than 50 percent of resources within lack majority of exterior materials |
| | | Changed roof material type and pattern | |
| | | Replacement of windows or doors | |
| | | Replacement of porch/canopy supports | |
| | | Severe disrepair | |
| ***Workmanship*** | The physical evidence of the crafts of a particular culture or people | Removal of distinctive handmade architectural detailing | Removal of distinctive landscape or streetscape features |

| ***Table A1**. The seven aspects of integrity: definitions and common examples of alterations.* | | | |
|---|---|---|---|
| **Aspect** | **Definition** | **Individual Resource Examples** | **Historic District Examples** |
| | during any given period in history or prehistory. | | |
| ***Setting*** | The physical environment of a historic property. | Reorientation of building within landscape/street grid | Reorientation of majority of buildings within setting/street grid |
| | | Removal of historic / introduction of new landscape features | Removal of historic / introduction of new landscape features |
| | | Construction of non-historic resources on site | Construction of incompatible, non-historic resources |
| | | | Demolition or replacement of majority of resources |
| ***Feeling*** | The property's expression of the aesthetic or historic sense of a particular period of time. | Accumulation of small changes that alter overall feel | Accumulation of small changes that alter overall feel |
| ***Association*** | The direct link between an important historic event or person and a historic property. | Historic function is no longer discernible | Overall district's historic function is no longer discernible |
| | | Appearance during significant person's residence no longer discernible | Overall appearance during significant residence(s)' is no longer discernible |
| | | Appearance during significant event no longer discernible | Overall appearance during significant event no longer discernible |

## Integrity Thresholds

**All properties change over time. It is not necessary for a property to retain all its historic physical features or characteristics. The property must retain, however, the essential physical features that enable it to convey its historic identity.[3]**

A resource need not retain all seven of these aspects of integrity to be eligible for historic designation. Some criteria carry more weight than others. For example, retaining integrity of location is essential for eligibility. According to *National Register Bulletin 15*, resources that have been moved ordinarily "shall not be considered eligible for the National Register."[4] Similarly, integrity of design typically is considered an essential aspect of integrity since it captures fundamental features like overall form and massing, without which a resource's historic appearance becomes unrecognizable. The other aspects of integrity are interrelated and flexible, and sometimes one aspect of integrity can counterbalance the loss of another. The hierarchical yet interrelated structure of the aspects of integrity is illustrated in Figure A1.

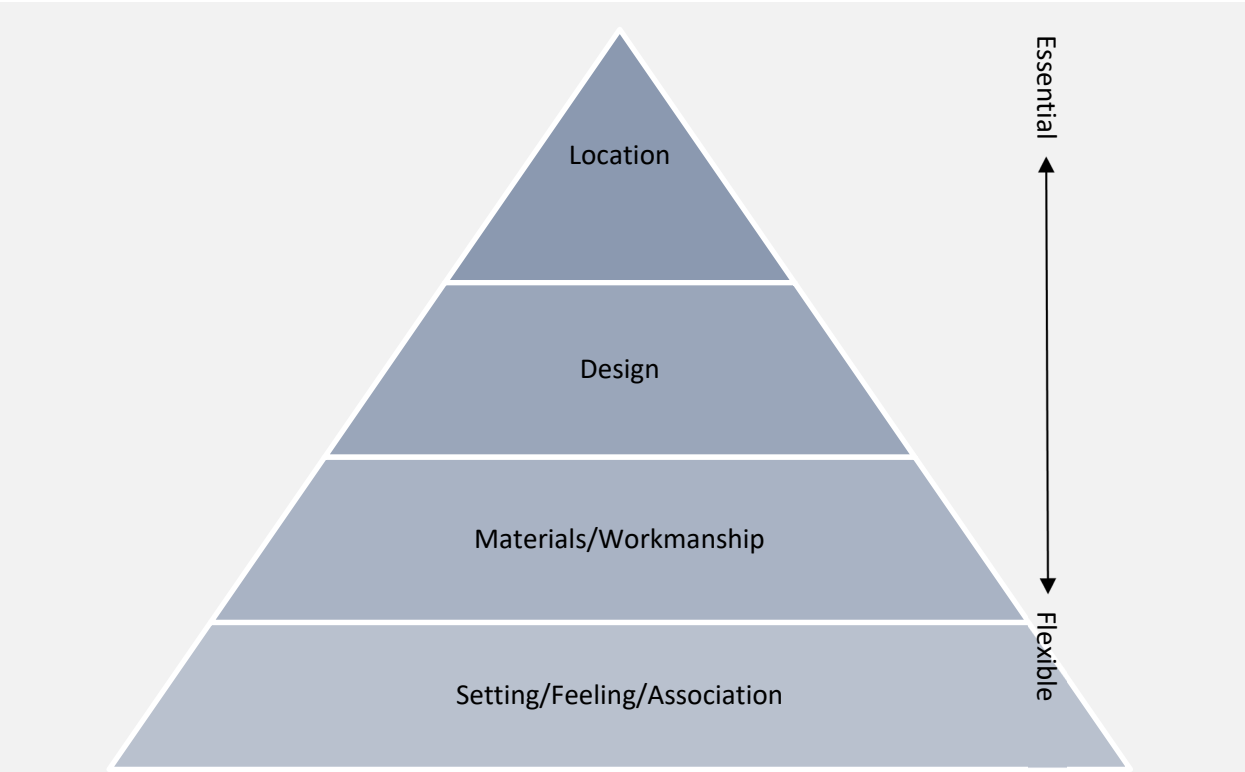

***Figure A1.*** *Chart describing the hierarchy and interrelationships among the seven aspects of integrity. Location and Design stand alone at the top – typically a property cannot be eligible without these aspects. Materials and Workmanship are interrelated in the middle. Setting, Feeling, and Association support one another at the base because they often are interrelated.*

The threshold for alterations to overwhelm integrity varies from building to building. The building's age, architectural style, and building form all affect the character-defining features that should remain intact to protect a building's integrity.

Additionally, the National Register applies different thresholds of integrity to resources on an individual basis versus a grouping of resources within a historic district. An individual resource must convey its story on its own. To do so, an individual resource must retain a high degree of integrity. On the other hand, a historic district contains a collection of resources that each tell a small part of the overall story.

The overall site plan and landscape patterns within the district must retain a high degree of integrity, and the majority of the resources within the district must retain at least a medium degree of integrity. Table A2 below lists common alterations often considered to meet the minimum integrity threshold for individual eligibility, contrasted with alterations typically considered within the permissible integrity threshold for a contributing building in a historic district.

**Keep in mind that a resource's integrity is not fixed. Integrity can be recovered by reversing inappropriate alterations or waiting until alterations are 50 years old.[5]**

***Table A2.*** *Integrity thresholds: common alterations for individual buildings versus contributing buildings in historic districts.*

| Common alteration | Retains integrity at individual threshold? | Retains integrity at contributing threshold? |
|---|---|---|
| Alterations aged 50 years or older | ✓ | ✓ |
| Relocation to a different setting | × | × |
| Relocation to a setting similar to original | ✓ | ✓ |
| Interior alteration | ✓ | ✓ |
| Structural or systems alterations not visible from public view | ✓ | ✓ |
| Compatible addition not visible from public view | ✓ | ✓ |
| Compatible additions visible from public view but set back 15-feet or behind ridgeline | ✓ | ✓ |
| Incompatible addition visible from public view | × | × |
| Changed roof form or pitch | × | × |
| Enclosed or changed size of any openings on front façade(s) | × | ✓ |
| Ordinary maintenance like painting | ✓ | ✓ |
| Replacement of exterior wall materials matching profile, dimension, and finish of original (including use of synthetic replacement materials) | ✓ | ✓ |
| Replacement of exterior wall materials not matching original but reversible | × | ✓ |
| Concealment of original exterior wall materials with permanent masonry veneer | × | × |
| Replacement of windows or doors matching profile, dimension, and finish of original (including use of synthetic replacement materials) | ✓ | ✓ |
| Incompatible replacement of windows or doors | × | ✓ |
| Replacement of porch/canopy supports matching materials, profile, dimension, and finish of original | ✓ | ✓ |
| Incompatible replacement of porch/canopy supports | × | ✓ |
| Replacement in kind of architectural detailing matching original materials, profile, dimensions, and finish | ✓ | ✓ |
| Removal or incompatible replacement of architectural detailing | × | ✓ |
| Severe disrepair | ✓ | ✓ |
| Removal of historic / introduction of new landscape features | ✓ | ✓ |
| Construction of large-scale and incompatible non-historic resources on site | ✓ | ✓ |
| Accumulation of small changes that alter overall feel | × | × |
| Appearance during significant person's residence no longer discernible | × | ✓ |
| Appearance during significant event no longer discernible | × | ✓ |

# APPENDIX B: SURVEY MAPS

The resources identified in the field are presented in the following maps. Resources surveyed individually are identified by their CAD Parcel ID number. Resources surveyed collectively are identified by their Subdivision name. The map distinguishes resources by their Survey Scale, Survey Level, and NRHP eligibility recommendation. Note that resources prepopulated in the database appear as polygons and that resources identified in the field that were not flagged for survey, and therefore were not prepopulated in the database, appear as points in the maps. Individually eligible resources also appear as points.

# APPENDIX C: WINDSHIELD-LEVEL SURVEY INVENTORY

Appendix C presents the inventory of all resources surveyed at the windshield and reconnaissance level. The inventory is sorted by: City, Street name, Street number, Subdivision.

Note that Jefferson Central Appraisal District Property Identification Numbers (CAD PIDN) are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

| Image / ID | Address / City, Unincorporated/Vicinity* | Subdivision / CAD PIDN** | Est. Year Built / Source | History Notes | NRHP Recommendations | Recommendation Justification | Survey Notes |
|---|---|---|---|---|---|---|---|
|  | 826 A&M ST | 114 JOHN DOUTHIT | 1962 | | Not eligible for NRHP | Lacks integrity, Lacks known significance | |
| HHM ID: 121830 | BEAUMONT | 136778 | Appraisal district | | | | |
|  | 800 BLOCK A&M ST | 114 JOHN DOUTHIT | 1970 | | Not eligible for NRHP | Lacks integrity, Lacks known significance | |
| HHM ID: 121829 | BEAUMONT | 136800 | Appraisal district | | | | |
|  | 1266 AGGIE DR | 25 JAS. GERISH JR. | 1940 | | Not eligible for NRHP | Lacks integrity, Lacks known significance | |
| HHM ID: 125491 | BEAUMONT | 129780 | In field estimate | | | | |
|  | 1340 AGGIE DR | 25 JAS. GERISH JR. | 1940 | | Not eligible for NRHP | Lacks known significance | |
| HHM ID: 125490 | BEAUMONT | 129761 | In field estimate | | | | |
|  | 1380 AGGIE DR | 25 JAS. GERISH JR. | 1940 | | Not eligible for NRHP | Lacks known significance | |

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

| Image / ID | Address / City, Unincorporated/Vicinity* | Subdivision / CAD PIDN** | Est. Year Built / Source | History Notes | NRHP Recommendations | Recommendation Justification | Survey Notes |
|---|---|---|---|---|---|---|---|
| HHM ID: 125489 | BEAUMONT | 129852 | In field estimate | | | | |
|  | 1416 AGGIE DR | 25 JAS. GERISH JR. | 1968 | | Not eligible for NRHP | Lacks known significance | |

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. * HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. * HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

* HHM prepopulated city information from CAD. While the survey boundaries exclude the city limits of Beaumont and Port Arthur, a number of resources outside these limits have Beaumont and Port Arthur addresses in CAD. Additionally, because the unincorporated towns are often listed in an incorporated city in CAD, some resources in these areas have Beaumont, Port Arthur, or Winnie addresses. In some instances, though, where no city was prepopulated in the database, surveyors added unincorporated area/vicinity information in the field. In these cases, city information reflects the unincorporated area rather than the city listed in CAD.

** Note that CAD PID Nos. are not listed for resources surveyed at the collective scale due to the large number of parcels typically within a subdivision. To locate the subdivision name for a parcel, search by owner, address, or PID on the Jefferson Central Appraisal District's website: https://esearch.jcad.org/.

# Jefferson County Historic Resources Survey Plan, Historic Resources Survey, and Historic Preservation Plan

Volume III - Historic Preservation Plan

Prepared for the

Jefferson County Historical Commission

Prepared by HHM & Associates, Inc.

March 2024

*Photos courtesy of University of North Texas Libraries and the Texas Historical Commission.*

# Jefferson County Historic Preservation Plan

## EXECUTIVE SUMMARY

The Jefferson County Historic Preservation Plan aims to provide direction for the County Historical Commission (CHC) and Certified Local Government (CLG) over the next ten years by identifying goals, priorities, and concrete action items. The plan received funding from a National Park Service (NPS) grant targeted toward preservation planning in communities impacted by Hurricane Harvey, administered by the Texas Historical Commission. In 2021, the Austin-based preservation consulting firm HHM & Associates, Inc. (HHM) received the contract award for completion of the grant project. Other components of the grant project included development of a countywide historic context statement, completion of a countywide historic resources survey, and facilitation of a series of public meetings, as summarized in Table i below. Throughout the project, HHM collaborated with the CHC, CLG, and preservation stakeholders to understand Jefferson County's vision for preservation and to ensure that this plan reflected the county's values. This plan represents the culmination of outreach and engagement efforts conducted between April 2022 and May 2023. Public outreach efforts identified three core goals for Jefferson County's preservation program:

- Preparing for floods and natural disasters,
- Advocating for rehabilitation, and
- Minimizing neglect and vacancy.

To achieve these goals, the plan defines a series of action items, grouped into three priorities:

- Developing educational materials and events,
- Commenting on development, and
- Listing properties in the National Register.

The plan herein lists specific action items associated with each of these priorities, as well as an implantation timeline for each action item. The timeframe for implementation spans 10 years – from fiscal year 2025 through fiscal year 2034.

*Table i. Abbreviated project task list and schedule.*

| Task | Timeframe |
|---|---|
| Task 1. Project Management Plan | May 2021 |
| Task 2. Draft Investigative Study Research Design, Draft Public Involvement Plan, and Draft Fieldwork Methodology | July 2021 |
| Task 3. Final Investigative Study Research Design and Final Public Involvement Plan | August 2021 |
| Task 4. Research and Analysis | October 2021 |
| Task 5. Draft Historic Context | December 2021 |
| Task 6. Draft Countywide Survey Plan | February 2022 |
| Task 7. First Stakeholder Meeting, Final Countywide Survey Plan, and Final Fieldwork Methodology | May 2022 |
| Task 8. Field Survey and Data Analysis | December 2022 |
| Task 9. Draft Historic Resources Survey Report | March 2023 |
| Task 10. Draft Historic Preservation Plan | June 2023 |
| Task 11. Second Stakeholder Meeting, Pre-Final Historic Contexts, Pre-Final Historic Resources Survey Report, and Pre-Final Historic Preservation Plan | November 2023 |
| Task 12. Final Historic Contexts, Final Historic Resources Survey Report, and Final Historic Preservation Plan | March 2024 |

# ACKNOWLEDGEMENTS

The completion of this plan has relied on the efforts and contributions of many, and the authors wish to extend their sincere appreciation for their assistance through the duration of the project.

Jefferson County Judge Jeff Branick and Jefferson County Commissioners provided the support necessary to apply for NPS grant funding for the project and to implement the project. Their support for the project demonstrates the County's continued commitment to historic preservation. The Jefferson County Historical Commission provided invaluable input and support for the project as well. Chair Theresa Goodness especially provided critical assistance seeking grant funding and implementing the project. The Jefferson County Certified Local Government coordinator, Jennifer Trenbeath, additionally provided crucial input and assistance in bringing this project to life. Texas Historical Commission staff also worked closely with the county and the consulting team throughout the project, and Historic Resources Survey Coordinator Leslie Wolfenden-Guidry and Disaster Assistance Program Coordinator Lisa Hart both deserve special thanks for their guidance throughout the project.

The authors also would like to recognize the many volunteers and individuals who took the time from their busy schedules to attend the public meetings at the outset of the project and then shared their insights into the state of historic preservation in Jefferson County. They also gave much-needed input and feedback to help identify and refine broad goals and priorities that provided greater clarity and direction in support of future preservation planning-related efforts. Their assistance is greatly appreciated.

# LIST OF ACRONYMS

The following are acronyms that are commonly used throughout the document.

| | |
|---|---|
| ACHP | Advisory Council on Historic Preservation |
| CHC | County Historical Commission |
| CLG | Certified Local Government |
| DOE | Determination of Eligibility |
| DOI | Department of the Interior |
| FLHP | Family Land Heritage Property |
| FY | Fiscal Year |
| HHM | HHM & Associates, Inc. |
| HOT | Hotel Occupancy Tax |
| HPO | Historic Preservation Officer |
| HTC | Historic Texas Cemetery |
| HUD | (US Department of) Housing and Urban Development |
| NEPA | National Environmental Policy Act |
| NHL | National Historic Landmark |
| NHPA | National Historic Preservation Act |
| NPI | National Preservation Institute |
| NPS | National Park Service |
| NRHP | National Register of Historic Places |
| NTHP | National Trust for Historic Preservation |
| OTHM | Official Texas Historical Markers |
| RTHL | Recorded Texas Historic Landmark |
| SAL | State Antiquities Landmark |
| SHPO | State Historic Preservation Officer |
| SOI | Secretary of the Interior (*Secretary of the Interior's Professional Qualification Standards*) |
| TARL | Texas Archeological Research Laboratory |
| TCM | Texas Centennial Marker |
| THC | Texas Historical Commission |
| THSC | Texas Health and Safety Code |
| THT | Texas Heritage Trail |
| TMSP | Texas Main Street Program |
| TPTF | Texas Preservation Trust Fund |
| TxDOT | Texas Department of Transportation |
| USACE | US Army Corps of Engineers |

# Key Terms and Definitions

The following are among the most commonly used terms for a variety of preservation-related activities. Each term is briefly defined, and readers can get more information by accessing the website location listed in the applicable endnote or, when using an electronic copy, by clicking the embedded link for terms that are underlined and in blue text. To access the embedded link, place the mouse or cursor over the phrase and click the left mouse button. This action will open a web browser and navigate to the identified website that provides more detailed information. Please note that these links are subject to change. Please note that terms in italics are listed and defined in this section.

Advisory Council on Historic Preservation (ACHP)[1] – an independent federal agency that promotes the preservation, enhancement, and productive use of our nation's historic resources and advises the president and congress on national historic preservation policy

Building[2] – an edifice that is created principally to shelter any type of human activity, such as a house, barn, church, hotel, or similar construction

Certificate of Appropriateness[3] – a step undertaken by some local governments with preservation ordinances that allows commissions and boards to review and approve proposed changes to designated historic buildings; such a review is only authorized by local law and ordinances

Certified Historic Structure[4] – a term used in the *Federal Historic Preservation Tax Incentives Program* that refers to a building that is listed in the *National Register of Historic Places*, either individually or as a *Contributing* resource within a historic district

Certified Local Government[5] – a program established by the *National Park Service* and overseen at the state level by the *Texas Historical Commission* to help local governments promote historic preservation within their jurisdiction

Chapter 26[6] of the Parks and Wildlife Code of Texas State Statutes – a state law that is similar to *Section 4(f)* of the Federal Transportation Act that requires state agencies and political subdivisions within the state to consider how their actions may affect public lands that include historic properties, park and recreation lands, scientific areas, wildlife and waterfowl refuges

Contributing[7] – a feature that adds to or enhances a sense of the past within an associated historic property or historic district

County Historical Commission[8] – a group, established by state law, that oversees a variety of history- and preservation-related activities and serves as a liaison between the *Texas Historical Commission* at the state-level and the county-level government and residents at the local level

Cultural Landscape[9] – a geographic area that includes a cohesive grouping of both natural and man-made features that constitutes a distinct and integrated unit, such as a park, ranch, farm, or groupings of such places

Cultural Resource[10] – a term commonly used in preservation-related compliance procedures (e.g., Section 106) that includes both historic resources and archaeological sites

Design Standards and Guidelines[11] – recommendations that inform property owners and occupants of buildings of appropriate design methods, materials, and approaches that are consistent with, or compatible to, the overall physical and architectural character of a place, city, downtown, or neighborhood

Family Land Heritage[12] – a program operating within the Texas Department of Agriculture that honors families who have owned and operated a continuous agricultural operation for at least 100 years

Federal Tax Credits[13] – a federal tax credit that is worth 20 percent of the eligible rehabilitation costs for buildings that are listed in the *National Register of Historic Places*; the *Texas Historical Commission* oversees the program in Texas

Historic Context[14] – a narrative that examines the broad historical themes, patterns, and events within a geographic area that influenced the physical manmade environment and is related specifically to defined *Property Types*

Historic District[15] – a cohesive grouping of historic buildings, structures, sites, and objects within a well-defined area that is distinct from its surroundings

Historic Integrity – see *Seven Aspects of Integrity*

Historic Resource – a building, structure, site, or object that is at least 50 years old

Historic Resources Survey[16] – the process of identifying, documenting, and assessing historic resources within a defined area

Historical Markers – a common term for *State Historical Markers*

Keeper of the National Register[17] – the official at the *National Park Service* who certifies that a property meets established standards to be listed officially in the *National Register of Historic Places*

National Historic Preservation Act (NHPA)[18] – federal legislation that was enacted in 1966 to establish the *National Register of Historic Places* and oversee the nation's historic preservation programs

National Park Service (NPS)[19] – the federal agency tasked to supervise and help implement the nation's preservation programs and work with *State Historic Preservation Offices*

National Register Criteria[20] – the four attributes used to assess the quality of significance for inclusion in the *National Register of Historic Places* that considers association with historical events, trends, and patterns (Criterion A); significant individuals of the past (Criterion B); physical attributes or design qualities (Criterion C); or information potential (Criterion D)

National Register – a common term that is short for *National Register of Historic Places*

National Register Nomination[21] – a form that presents the necessary documentation to have a historic place listed in the *National Register of Historic Places*; the nomination form adheres to the standards stipulated in the *NHPA*

National Register of Historic Places (NRHP)[22] – the official list of historic buildings, structures, sites, objects, and districts that are worthy of preservation; the NRHP is maintained by the *National Park Service*

Noncontributing[23] – a feature that detracts from or diminishes a sense of the past within an associated historic property or historic district; it can either be a non-historic resource or a historic resource so severely altered that it no longer retains its *Historic Integrity*

Object[24] – a construction that is primarily artistic in nature or is relatively small in scale and simply constructed; although it may be, by nature or design, movable or a feature that is associated with a specific setting or environment, such as a sculpture, fountain, or marker

Parcel – a tract or plot of land

Polygon – a term used to describe groupings of parcels

Preservation[25] – within the context of the treatment of historic properties, one of the four guiding principles that focuses on the maintenance and repair of existing historic materials and retention of a property's form as it has evolved over time

Property Types[26] – the physical representation of the themes, trends, and patterns identified in a historic context, usually grouped by their shared physical characteristics, associative qualities, and geographic location/distribution

Reconstruction[27] – one of the four guiding principles of the treatment of historic properties that recreates vanished or non-surviving portions of a property for interpretive purposes

Rehabilitation[28] – one of the four guiding principles of the treatment of historic properties that acknowledges the need to alter or add to a historic property to meet continuing or changing uses while retaining the property's *Historic Integrity* and character

Restoration[29] – one of the four guiding principles of the treatment of historic properties that depicts a property at a particular period of time in its history, while removing evidence of other periods.

Secretary of the Interior's Standards for the Treatment of Historic Properties[30] – a *National Park Service* publication, commonly referred to as "The Standards," that defines the core principles for historic preservation; they are used by *SHPOs* and many local preservation programs to promote the continued use and viability of historic properties while protecting their important salient features

Section 106[31] – a provision of the *National Historic Preservation Act* that requires any federally funded, licensed, or permitted project to consider impact to properties that are listed in, or are eligible for, inclusion in the *NRHP* and to seek comments from the public

Section 4(f)[32] – a provision of the Transportation Act of 1966 that requires projects that receive funding from or require approval from a governmental agency affiliated with the US Department of Transportation to consider and avoid or minimize impacts to historic properties, park and recreation lands, and wildlife and waterfowl refuges before a project begins; in Texas, projects undertaken or approved by the Texas Department of Transportation typically trigger compliance with the Section 4(f) process

Seven Aspects of Integrity[33] – the qualities that enable a historic place to convey its significance through its location, setting, design, materials, workmanship, feeling, and association

Site[34] – the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historic, cultural, or archaeological value regardless of the value of any existing structure

State Antiquities Landmark[35] – a designation authorized by state law that gives legal protection to cultural resources (historic buildings and archaeological sites) on non-federal public lands

State Board of Review[36] – a group of professionals and experts in history, architecture, and archaeology and related fields who review *National Register nominations* to ensure that the forms provide sufficient documentation to meet the *National Register Criteria* and integrity standards; the SBR meets three to four times per year

State Historic Preservation Officer/State Historic Preservation Office (SHPO)[37] – the individual and associated staff that oversee the implementation of provisions of the *National Historic Preservation Act* at the state level; in Texas, the Executive Director and staff of the *Texas Historical Commission* fulfill these roles

State Historical Markers[38] – a program that the *Texas Historical Commission* administers to commemorate important places, individuals, events, trends, and other subjects throughout Texas

State Historic Tax Credits[39] – a state law enacted in 2015 that allows 25 percent of the eligible rehabilitation costs for buildings that are listed in the *National Register of Historic Places*; the *Texas Historical Commission* oversees the program

Structure[40] – similar to a building but distinguished by its functional construction that is usually made for purposes other than creating human shelter such as a bridge, dam, levee, railroad, or gazebo

Texas Historical Commission (THC)[41] – the state agency that administers and oversees a variety of programs to celebrate the state's history and to promote a better understanding and appreciation of the past; the THC is the leading proponent of historic preservation at the state level

Undertaking[42] – a term used in the *National Historic Preservation Act* to describe a federally funded, licensed, or permitted project that is subject to review and comment in accordance with provisions stated in *Section 106* of the Act

# INTRODUCTION

This countywide preservation plan will guide efforts to identify, designate, preserve, and celebrate significant historic properties. To this end, the plan provides action items for the Jefferson County Historical Commission (CHC) to implement, as well as appendices with information to share with other preservation stakeholders.

The many successes of past historic preservation efforts in Jefferson County demonstrate the ability of preservation advocates and development proponents to work together in a meaningful, cooperative, and mutually beneficial manner. The Jefferson County Historical Commission was founded in 1967, and participating Certified Local Governments within Jefferson County include the county itself, Beaumont, and Port Arthur.[1] Across Jefferson County, past efforts have listed 93 properties in the National Register and as Recorded Texas Historic Landmarks (Table 1). The past work of the Jefferson County Historical Commission has also resulted in 139 Official Texas Historical Markers (OTHMs) countywide (Table 2).

However, these previously designated resources reflect just a fraction of the diversity of properties in the county that illustrate architectural trends, broad historical themes, and the cultural legacy of individuals and groups that influenced the development of Jefferson County. The historic context and historic resources survey completed from 2022 through 2023 identified a wide array of significant themes, as well as an additional 14 historic districts and 90 individual resources that are eligible for listing in the National Register. Additional action is needed to broaden awareness about preservation in Jefferson County and guide preservation of a larger and more diverse inventory of historic resources. To that end, this Historic Preservation Plan includes the following sections:

- Vision and Guiding Principles
- Criteria for Setting Priorities
- Goals and Priorities
- Implementation Plan and Timeline
- Bibliography
- Appendices
    - Appendix A: List of Stakeholders
    - Appendix B: Public Outreach Results
    - Appendix C: Preservation Resources Toolkit
    - Appendix D: Prioritized National Register Recommendations

*Table 1. Properties and districts designated as Recorded Texas Historical Markers (RTHLS) and/or in the National Register of Historic Places (NRHP) in Jefferson County. Sources: Texas Historic Sites Atlas and Historic Resources of Texas Aggregator.*

# VISION AND GUIDING PRINCIPLES

The recommendations within this Historic Preservation Plan reflect comments received from the CHC and the public between April 2022 and May 2023. During that time, HHM and the CHC communicated with stakeholders countywide through a series of meetings, as well as a questionnaire. Key stakeholders are listed in Appendix A, and detailed findings from public outreach are reproduced in Appendix B. Several noteworthy themes arose during public outreach. The first is a deep respect for the CHC's legacy and appreciation for past successes. Many of the action items recommended in this plan represent continuations of longstanding CHC actions, sometimes with incremental enhancements. Another key takeaway was the widespread emphasis on the *holistic* value for all of the action items working together. Questionnaire results and meetings identified three key preservation goals for Jefferson County – preparing for floods and natural disasters, advocating for reuse and rehabilitation, and minimizing neglect and vacancy (each discussed in detail beginning on page 10). Among these, all three ranked equally in terms of importance and urgency. As a result, the implementation timeline within this plan initiates all action items as soon as possible, with staggered implementation only recommended if necessary given logistics. The long-term vision shared by preservation stakeholders in Jefferson County seems to focus on a manageable number of action items, most of which can be implemented concurrently and sustained over a long period of time.

## CRITERIA FOR SETTING PRIORITIES

The priorities and action items set forth within this plan are organized according to criteria derived from CHC input, combined with HHM's experience preparing and implementing similar preservation plans across Texas. The first two criteria are fiscal feasibility and political feasibility. Ideas generated during brainstorming sessions were only incorporated into this plan if they were *both* fiscally feasible based on the current CHC budget and CLG grant opportunities *and* politically feasible given current Texas state law and Jefferson County law and policy. Jefferson County approaches preservation from an incentive-based, advocacy-minded perspective rather than a regulatory stance, and this plan embraces that approach. Ideas that met both of these criteria were then grouped together into three identified priorities – developing educational materials and events, commenting on development, and listing properties in the National Register (each discussed in detail beginning on page 11). These priorities then were ordered according to how many goals they met. Within each priority, specific action items were ordered based on the logistics of implementation. Action items necessary to facilitate or streamline future actions were recommended for implementation soonest, followed by other action items. As noted above, though, many action items are recommended for concurrent implementation given the holistic value for a broad preservation program expressed during public outreach.

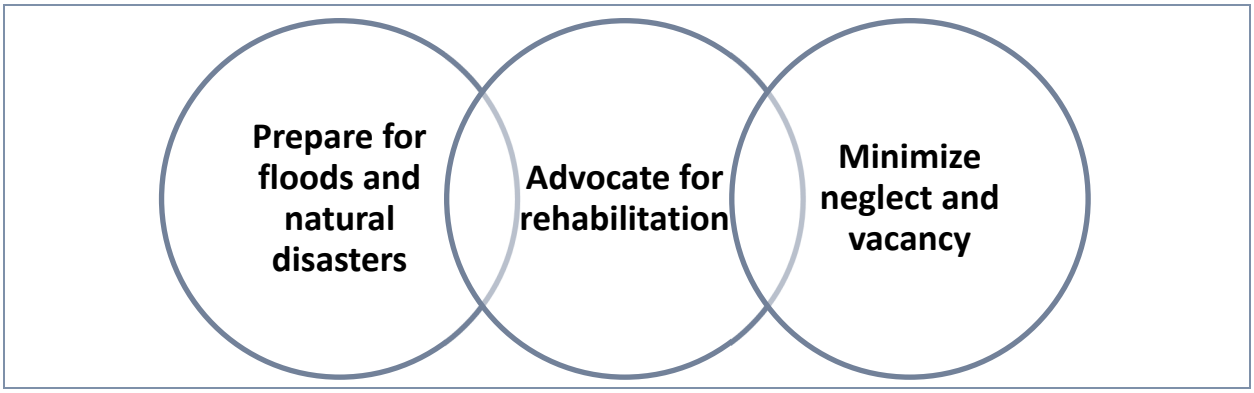

# GOALS, PRIORITIES, AND ACTION ITEMS

## GOALS

During public outreach, the CHC and stakeholders expressed their aim to achieve the following goals through future preservation efforts in Jefferson County:

- Prepare for floods and natural disasters,
- Advocate for rehabilitation, and
- Minimize neglect and vacancy.

Each of these goals arises from the decades of experience that the CHC and CLG have gained implementing preservation efforts in Jefferson County. These three goals are interrelated, and making progress toward one goal inevitably will help advance the other goals also.

The impacts of recent hurricanes and tropical storms indelibly impacted the historic resources of Jefferson County, as well as the mindset of the county's preservation advocates. Most recently, Hurricane Harvey in 2017 caused widespread flooding that resulted in water infiltration and severe deterioration of historic resources countywide. This historic preservation plan received funding from a special National Park Service grant for communities affected by Hurricane Harvey, and stakeholders across the county consistently noted preparing to better withstand future floods and natural disasters as a key goal. During the course of fieldwork for the historic resources survey that accompanied this preservation plan, property owners echoed support for this goal and reiterated the need for documentation of historic resources prior to the next big storm.

The next goal—advocating for rehabilitation—has long been essential to the missions of the CHC and CLG. The devastating impacts of Hurricane Harvey in 2017 and Hurricane Rita in 2005 underscored the importance of this goal. Numerous buildings were abandoned or demolished that likely could have accessed preservation incentives for reuse and rehabilitation. This plan aims to enhance future advocacy for reuse and rehabilitation, hopefully resulting in fewer demolitions of historic resources in turn.

The plan's final, related goal—minimizing neglect and vacancy—acknowledges the relationship between continued use of historic buildings and their ongoing maintenance and preservation. By aiming to keep historic buildings occupied, the plan aims to support continued investment for maintenance and rehabilitation. Keeping buildings in use also helps preserve communities and maintain cultural and ethnic links that have cultural significance in their own right. A value for understanding the connections between people and historic places permeates each goal within this preservation plan, and the priorities and action items outlined below all aim to respect and promote that value.

# PRIORITIES AND ACTION ITEMS

Careful consideration of stakeholder feedback, the financial and political realities of preservation in Jefferson County, and the plan's underlying goals yielded three primary priorities for preservation efforts over the next ten years – developing educational materials and events, commenting on development, and listing properties in the National Register. Each of these priorities supports two or more of the goals defined by Jefferson County, as indicated in Table 3 below. Each of these priorities is described in greater detail below, followed by a list of concrete, measurable action items that will help advance the priority and take steps toward achieving the county's preservation goals.

*Table 3. Comparison of Jefferson County's preservation goals and priorities for achieving those goals.*

| Priorities | Preservation Goals | | |
|---|---|---|---|
| | Prepare for Floods and Natural Disasters | Discourage Demolition | Minimize Neglect and Vacancy |
| 1. Develop Educational Materials and Events | ✓ | ✓ | ✓ |
| 2. Comment on Development | ✓ | ✓ | ✓ |
| 3. List Properties in the National Register | | ✓ | ✓ |

## Priority 1. Develop Educational Materials and Events

**Goals supported by this priority:**

Developing educational materials and events will help broaden public understanding of preservation goals in Jefferson County, aiding to expand the team of preservation partners who will work together to implement later priorities. Action items needed to implement this priority are listed below. Action items were selected based on their effectiveness at supporting *all three* goals listed above – preparing for floods and natural disasters, advocating for reuse and rehabilitation, *and* minimizing neglect and vacancy. Selection of action items also considered the audience that would be reached – with educational materials and events targeting key decision-makers placed first, followed by those that would reach a large public audience, followed by those that might reach a smaller audience but still remain important.

- Action Item 1-1. Share survey data online.
  - Post PDFs of the final countywide historic resources survey and preservation plan on the Jefferson County Historical Commission website.
  - Work with Jefferson County GIS staff to upload the GIS data submitted with the survey to an interactive ESRI ArcGIS Story Map.
  - Post a link to the GIS Story Map on the Jefferson County Historical Commission website.
  - Encourage municipalities and libraries within Jefferson County to add links to the countywide historic resources survey, preservation plan, and GIS Story Map to their websites.
  - If necessary, seek assistance from students, volunteers, or consultants to maintain the online files.

- Action Item 1-2. Train other commissions and agencies about how to use survey data for proactive planning.
    - Develop a video tutorial for how to use the online files and host a link to the video on the Jefferson County Historical Commission website.
    - Share the video tutorial via email and social media. (Also refer to Action Item 1-3 below.)
    - Present the online files, GIS story map, and video tutorial at Jefferson County board and commission meetings.
    - Present the online files, GIS story map, and video tutorial at relevant municipal board and commission meetings.
    - Host a series of "office hours" at local libraries to answer questions and provide hands-on assistance navigating the online files and GIS story map.
- Action Item 1-3. Maintain survey data routinely.
    - When the CHC becomes aware of rehabilitations, alterations, or demolitions, update the GIS Story Map.
    - As necessary, create and update a memo of demolitions of surveyed resources, to be posted on the Jefferson County Historical Commission website alongside the PDF of the survey report.
    - Create a second GIS Story Map of the "Lost Historic Resources of Jefferson County," moving resources from the survey map to this map if/when they are demolished.
    - If necessary, seek assistance from students, volunteers, or consultants to maintain the online files.
- Action Item 1-4. Continue maintaining CHC social media.
    - Develop social media outreach.
    - Continue to maintain the CHC Facebook page.
    - Duplicate Facebook postings on other social media platforms—such as Twitter, Instagram, and LinkedIn—revisiting the list of platforms annually.
    - Establish and enforce community guidelines for social media, aiming to maintain positive and welcoming messaging that broadens the CHC's audience as much as possible.
    - Share online survey files and GIS Story Maps via email and social media – including updates celebrating when surveyed resources are rehabilitated or sharing when historic resources are lost.
    - Create overlap between the CHC's email newsletter and social media postings – posting newsletter information on social media and also including a social media digest summarizing postings within newsletters.
    - Repost information from partner organizations and encourage them to repost CHC information.
    - Create a new collection in the Jefferson County Historical Commission Archives to gather and protect social media postings and newsletters in a format that will ensure preservation of the information for future generations.
- Action Item 1-5. Continue creating new state historical markers.
    - Review themes from the countywide historic context and select priorities.
    - Create a list of potential markers associated with each selected theme, using examples in the historic context and historic survey data.
    - Update the list of potential markers annually to incorporate newly identified themes and places.

  - For identified places on private property, coordinate with property owners for permission to place a marker on the property or nearby.
  - Continue to maintain close communications with the THC marker staff.
  - Create a list of funding sources for markers, such as grants, and update the list annually.
  - Proactively maintain relationships with County Commissioners to streamline the process of funding and installing markers. (Refer to Action Item 2-3.)
- Action Item 1-6. Continue and enhance tours of historic places.
  - Continue to provide cemetery tours, adding themed tours for holidays like Halloween, *Dia de Los Muertos*, Juneteenth, Indigenous Peoples Day, Labor Day, and Memorial Day.
  - Continue to provide County Courthouse tours, coordinating with County Commissioners and other County officials.
  - Record videos of tours and post them on social media to help expand the audience. (Refer to Action Item 1-3: Continue maintaining CHC social media.)
  - Work with partner organizations and tours—like Beaumont Main Street's walking tour—to enhance participation and help reach new audiences.
  - Work with professional groups like realtors, architects, and interior designers to organize special tours of building interiors.
  - Publicize tours using social media and the CHC newsletter.
- Action Item 1-7. Routinely update printed and digital educational materials.
  - Share printed copies of the CHC newsletter with local libraries, archives, museums, universities, and other individuals/groups upon request.
  - Print copies of the Preservation Resource Toolkit (Appendix C) and share upon request.
  - Host booths with printed copies of the newsletter and Resource Toolkit at events like the South Texas State Fair, and routinely communicate with local tourism groups about events that would be a good fit.[8]
- Action Item 1-8. Support archives and museums.
  - Assign members of the CHC to serve as liaisons on the boards of libraries and museums across Jefferson County.
  - Invite staff and board members from libraries and museums to all CHC events.
  - Publicize archive and museum events using the CHC newsletter and social media network.
  - Recognize and thank museum and archives representatives for successes using the CHC newsletter and social media network.

## Priority 2. Comment on Development

**Goals supported by this priority:**

Balancing historic preservation with the need for new development requires thoughtful planning and careful balance. The members of the Jefferson County CHC collectively hold a wealth of knowledge, experience, skill, and insight that can help guide decisions about development projects with potential to

[8] See "Beaumont's Annual Events," Beaumont Convention and Visitors Bureau," accessed July 10, 2023, https://www.beaumontcvb.com/events/annual-events/.

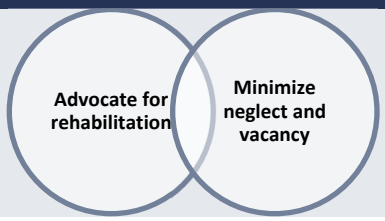

impact historic resources. The role of the CHC is advisory only—not regulatory—but judicious advice can help the CHC achieve *all three* goals listed above – preparing for floods and natural disasters, advocating for reuse and rehabilitation, *and* minimizing neglect and vacancy. Action items needed to implement this priority are listed below. Selection of action items prioritizes the responsibilities of the CHC – Section 106 review and input on County development projects. Action items that entail review of municipal or grassroots development follow, structured with a focus on information-sharing and advocacy.

- Action Item 2-1. Develop a triage plan for review of development projects that considers CHC members' areas of expertise and also aims to distribute responsibility for review so that no single member becomes overwhelmed.
- Action Item 2-2. Continue to review Section 106 undertakings.
    - Assign the County HPO to review each Section 106 undertaking with potential to adversely impact a designated historic resource (listed in the THC Atlas or as a local landmark), an identified eligible historic resource (recommended in the survey report and online survey map), *or* a property flagged as needing right-of-entry and/or intensive-level research for eligibility evaluation in the survey report.
    - Assign the County HPO to provide notice to commission appointees to participate in a 10-day review period before the HPO responds to the applicant.
    - Discuss Section 106 reviews at each bi-monthly CHC meeting. If the HPO/commission members have identified eligible historic resources that might be adversely impacted, call special meeting if necessary to vote on whether to comment and/or request consulting party status.
    - If agreed upon by a majority of CHC members, have the assigned CHC member write a letter providing comments and/or requesting consulting party status.
    - Recognize and thank THC and federal government representatives for successes using the CHC newsletter and social media network.
- Action Item 2-3. Begin reviewing and commenting on County development projects.
    - Meet informally with County staff and officials to encourage them to brief the CHC proactively when new development projects are planned.
    - Hold annual training sessions for County staff and officials to educate them about this preservation plan and the benefits of preservation.
    - Establish a communication protocol between the County Engineer's office, the HPO, and the CHC to ensure timely notification as soon as new subdivision plats are submitted for approval.
    - Attend County commission meetings and develop a list of upcoming development projects that require County funding or approval.
    - Using the triage plan, assign a CHC member to review each County project with potential to adversely impact a designated historic resource (listed in the THC Atlas or as a local landmark), an identified eligible historic resource (recommended in the survey report and online survey map), *or* a property flagged as needing right-of-entry and/or intensive-level research for eligibility evaluation in the survey report.
    - Discuss County project reviews at each bi-monthly CHC meeting and vote on whether to comment and/or speak at an upcoming hearing.
    - If agreed upon by a majority of CHC members, have the assigned CHC member write a letter to the County Commissioners commenting on the project and/or speak at an upcoming County Commission meeting.
    - Recognize and thank County representatives for successes using the CHC newsletter and social media network.

- Action Item 2-4. Support municipal preservation programs.
    - Meet informally with representatives from the South East Regional Planning Commission,
      municipal planning departments, economic development organizations, chambers of commerce, and landmarks commissioners to encourage them to brief the CHC proactively when new development potentially may affect historic resources.
    - Hold annual training sessions for the stakeholders listed above to educate them about this preservation plan and the benefits of preservation.
    - Work with the THC to develop a template for a local preservation ordinance that non-CLG municipalities may adopt.
    - Continue to have CHC members serve as liaisons to the Beaumont and Port Arthur landmarks commission (as well as other municipal landmarks commissions if created).
    - Have liaisons review demolition permit requests and certificate of appropriateness applications.
    - Using the triage plan, assign a CHC member to review each demolition or alteration with potential to adversely impact a designated historic resource (listed in the THC Atlas or as a local landmark), an identified eligible historic resource (recommended in the survey report and online survey map), *or* a property flagged as needing right-of-entry and/or intensive-level research for eligibility evaluation in the survey report.
    - Discuss local development reviews at each bi-monthly CHC meeting and vote on whether to comment and/or speak at an upcoming landmarks commission meeting.
    - If agreed upon by a majority of CHC members, have the assigned CHC member write a letter providing comments and/or speak at an upcoming landmarks commission meeting.
    - Recognize and thank municipal representatives for successes using the CHC newsletter and social media network.
- Action Item 2-5. Consolidate and amplify grassroots comments.
    - Use social media and the CHC newsletter to solicit feedback about development projects.
    - Compile grassroots feedback as an attachment to CHC letters commenting on development.
    - Help notify the public about upcoming public hearings to discuss development projects with preservation implications.
    - Monitor grassroots organizations' concerns about development projects and vote on whether to lend support at bi-monthly CHC meetings.
    - If agreed upon by a majority of CHC members, use social media and the CHC newsletter to help spread the message about grassroots preservation issues and solicit support.

## Priority 3. List Properties in the National Register

**Goals supported by this priority:**

- Action Item 3-1. Review and maintain the prioritized list of recommended National Register nominations included in Appendix D. This list is prioritized based on the following:
    - Tier A: Commercial, industrial, and non-profit properties are given highest priority since National Register listing will enable access to federal and/or state preservation tax credits (as further detailed in Appendix C).
        - Tier A-i: Multi-property district nominations are prioritized first, in order to provide access for the greatest number of property owners.
        - Tier A-ii: Individual properties are prioritized next.
    - Tier B: Public properties are given second priority for National Register nomination. Although typically not able to access federal or state tax credits, these properties often hold value for a large number of people, and National Register nomination can have significant benefits for education and public engagement.
        - Tier B-i: District nominations are prioritized first within this tier.
        - Tier B-ii: A multi-property submission for Post-World War II Public Buildings of Jefferson County is given second priority within this tier.
        - Tier B-iii: Individual properties are prioritized next.
    - Tier C: Residential properties are placed within the third priority level for National Register nomination. Although owner-occupied residences are not eligible for federal and/or state preservation tax credits, rental residences or home offices may be eligible (as further detailed in Appendix C).
        - Tier C-i: District nominations are prioritized first within this tier.
        - Tier C-ii: Individual properties are prioritized next.
- Action Item 3-2. Coordinate with stakeholders about National Register nominations.
    - Work with the THC to develop a fact sheet and brief informational video about the National Register (NR) and associated historic tax credits, to be posted on the CHC website and distributed via social media.
    - Work with the THC to host a meeting explaining the National Register and associated tax credits, and invite owners of NR-eligible properties, as well as representatives from associated municipalities, economic development corporations, chambers of commerce, and the Southeast Texas Economic Development Foundation.
    - Distribute a follow-up survey to owners of NR-eligible properties to gauge interest in NR nominations, revisiting the survey annually since ownership may change.
    - Update the list of NR priorities every two years, based on owner support.
- Action Item 3-3. Seek partnerships to fund and complete National Register nominations.
    - Annually, coordinate with qualified preservation consultants to select nomination(s) that have owner support and can be completed within the limits of the CLG grant program (currently around $80,000).
    - Coordinate with the qualified preservation consultant to identify tasks suitable for volunteer labor, which can supply an in-kind match for CLG grants. Request volunteer assistance to complete identified tasks. Opportunities for outreach include annual

stakeholder training sessions (described in Action Item 2-4 above), as well as annual surveys gauging support among owners of NR-eligible properties (described under Action Item 3-2 above).

- If volunteer labor commitments are not sufficient to provide the 50 percent match required for the CLG grant, consolidate cash matching funds from County government appropriations, municipal government appropriations, or partnering private organizations. If a private organization will be a financial partner in the potential project, contact the THC's CLG coordinator to discuss necessary contractual arrangements.
- Apply annually for CLG grants from THC to complete the selected nomination(s), documenting the consolidated matching labor/funds to demonstrate commitment to the project.
- Complete the nomination(s) according to all THC and NPS requirements.

# IMPLEMENTATION PLAN AND TIMELINE

The table below sets forth a ten-year implementation plan and timeline for all action items identified above. Based on feedback received in meetings, the CHC prefers to keep the implementation plan simple and flexible. As a result, the plan does not assign responsible individuals for action items, nor does it specify anticipated costs. The CHC may use this document as a baseline, modifying the document to add details like responsible individuals and costs gradually over the next ten years.

*Table 4. Implementation plan and timeline for historic preservation plan action items.*

| | FY 2025 | FY 2026 | FY 2027 | FY 2028 | FY 2029 | FY 2030 | FY 2031 | FY 2032 | FY 2033 | FY 2034 |

    - Dohn LaBiche, Architect

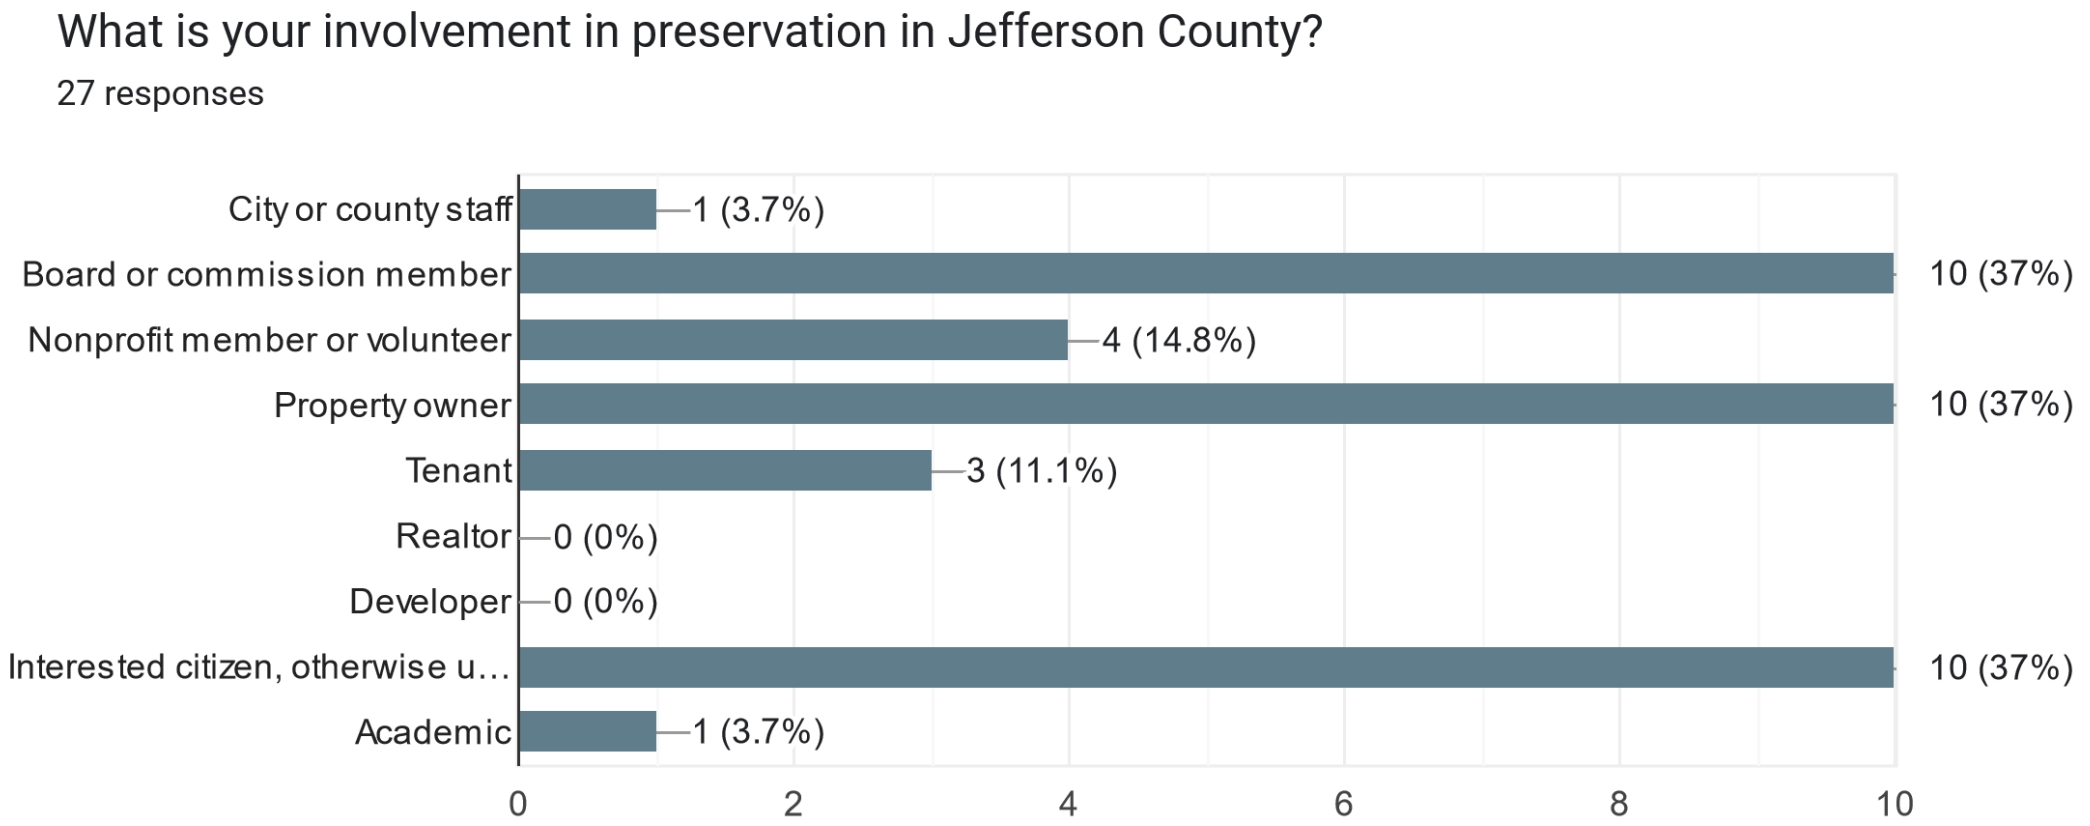

# APPENDIX B: PUBLIC OUTREACH RESULTS

## Summary

# 1 Questionnaire Findings

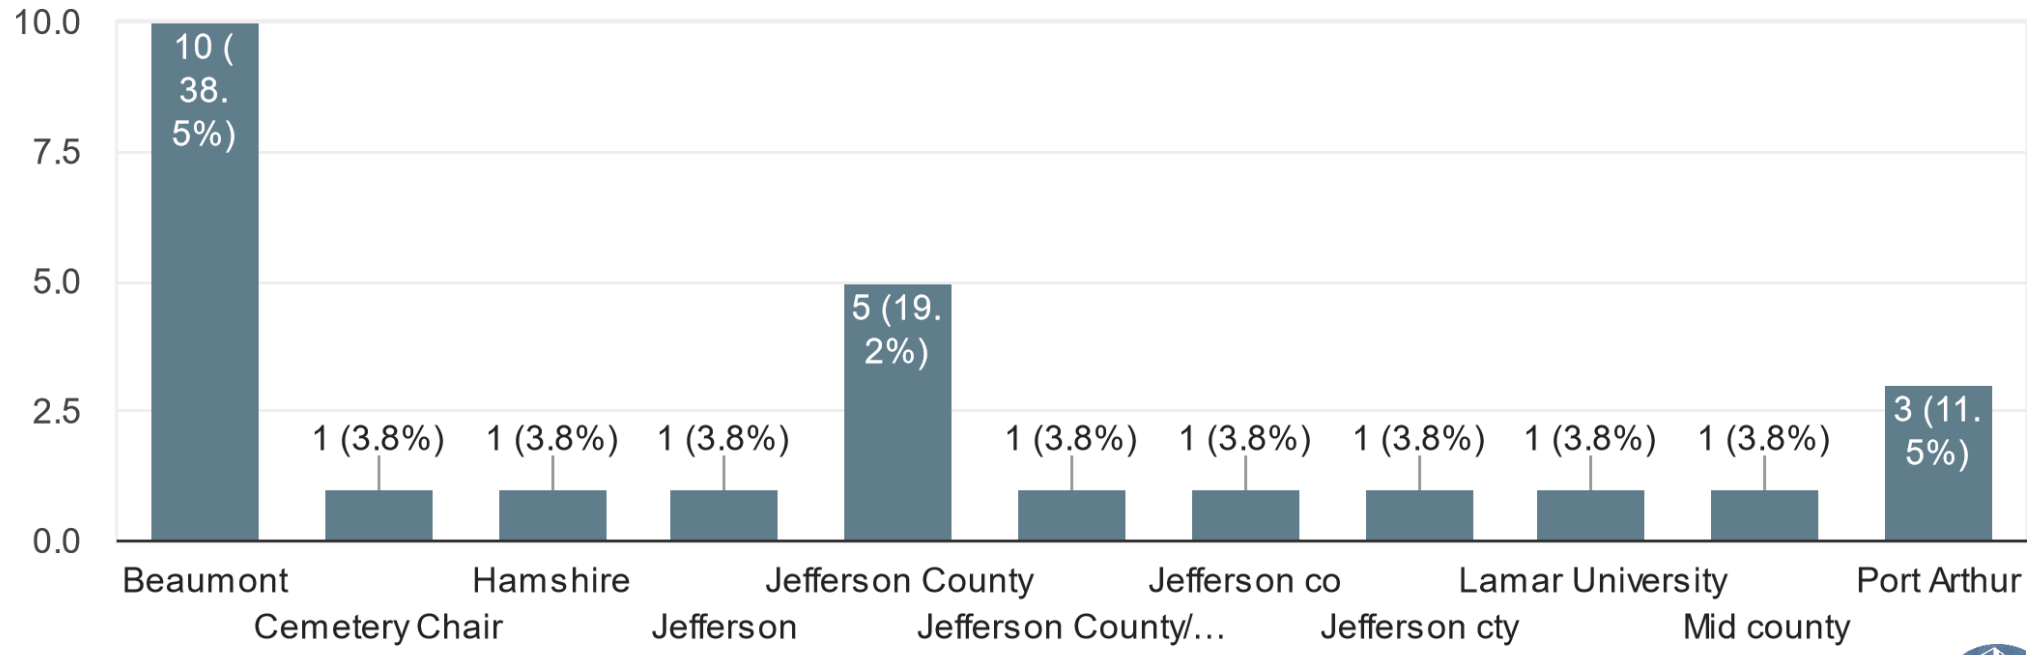

# Questionnaire Results, May 17, 2020

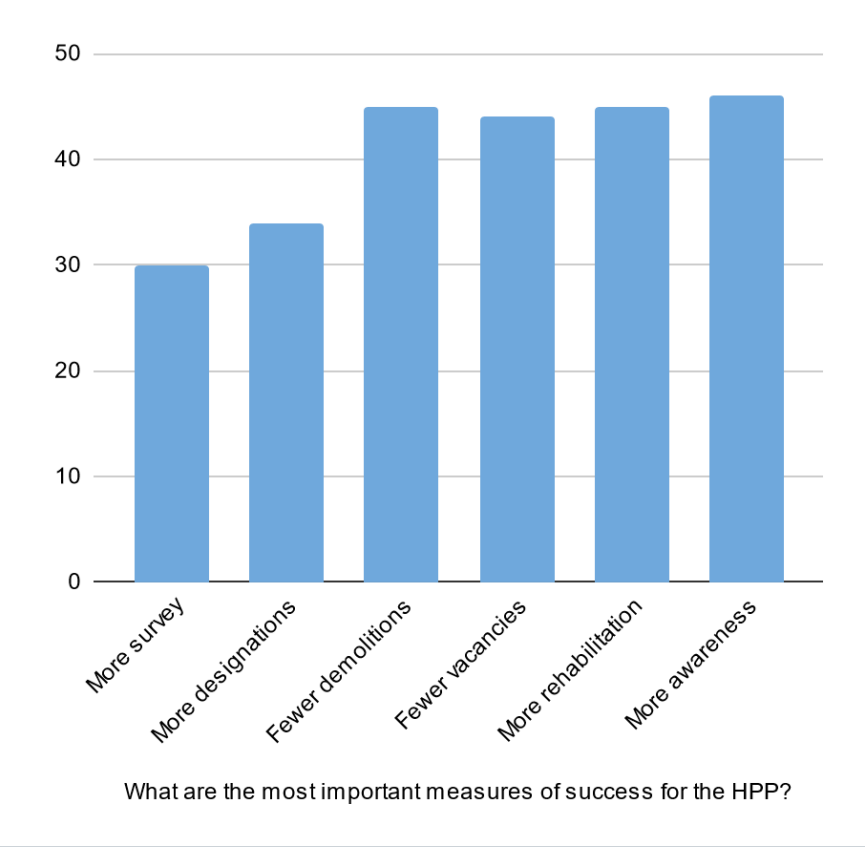

# Questionnaire Results, May 17, 2020

What municipality or area do you represent?

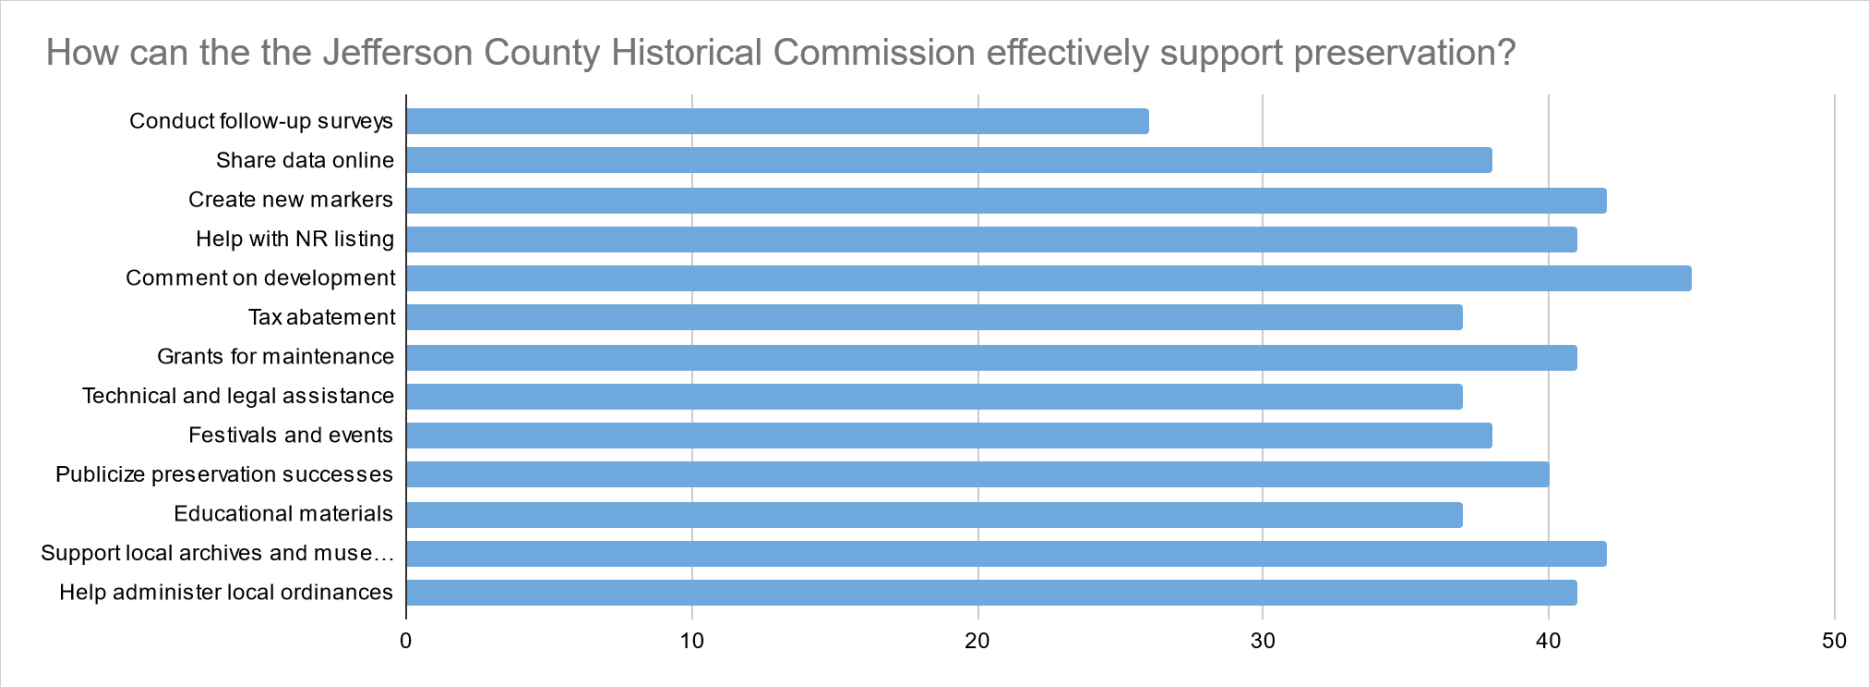

26 responses

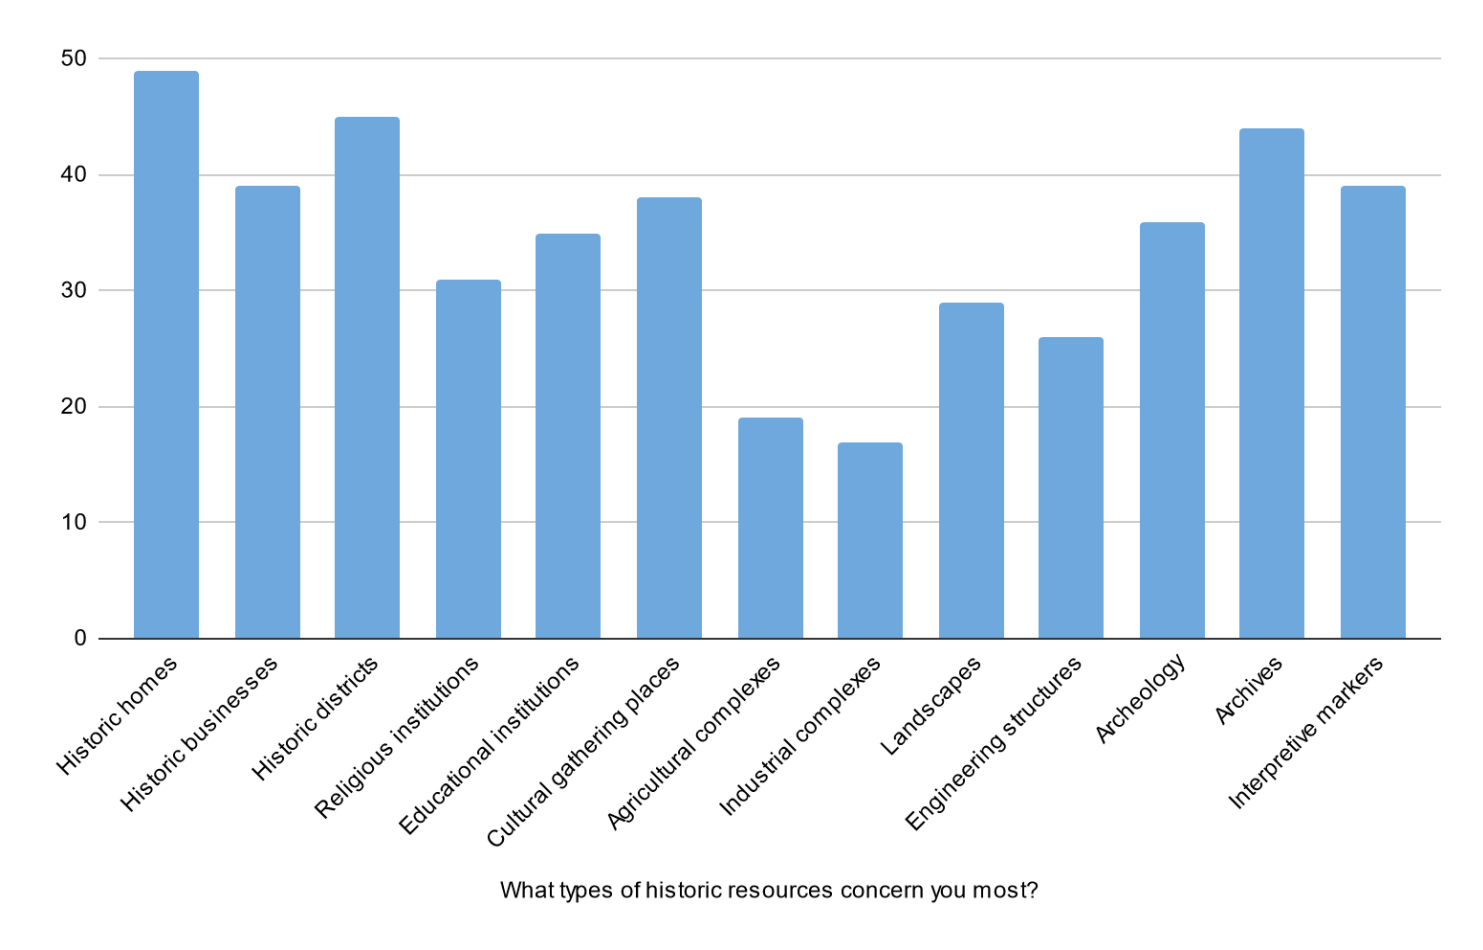

# Questionnaire Results, May 17, 2020

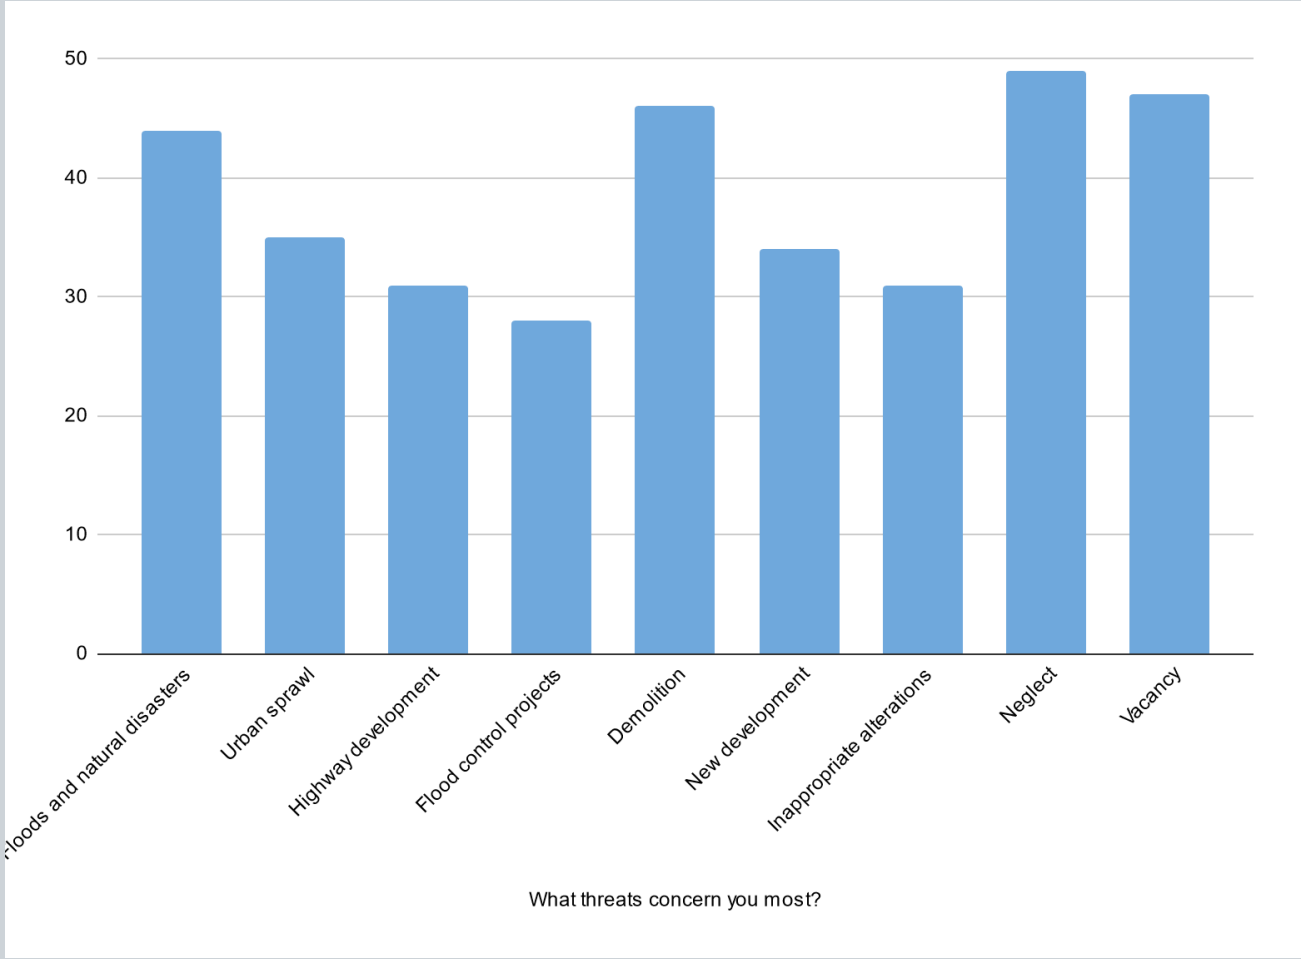

# Questionnaire Results, May 17, 2020

# Questionnaire Results, May 17, 2020

# Questionnaire Results, May 17, 2020

# 2 Key Takeaways

# Key Takeaways

- Wholistic perspective – not huge differences in priorities
- Primary goals include:
  - Minimizing neglect and vacancy
  - Preventing demolition
  - Preparing for floods and natural disasters
- Top priorities include:
  - Commenting on development
  - Creating new markers
  - Supporting archives and museums
  - Helping support local ordinances
- More survey is not a big priority
- Other observations?

## Detailed Results

# Questionnaire: Jefferson County Historic Preservation Plan

The questions below aim to gather information to inform the draft Jefferson County Historic Preservation Plan. Please submit comments no later than **Friday, May 5, 2023**. The draft Historic Preservation Plan will be shared with stakeholders for review and comment in July 2023.

The respondent's email ([redacted] was recorded on submission of this form.

What is your involvement in preservation in Jefferson County?

- [ ] City or county staff
- [x] Board or commission member
- [x] Nonprofit member or volunteer
- [ ] Property owner
- [ ] Tenant
- [ ] Realtor
- [ ] Developer
- [ ] Interested citizen, otherwise unaffiliated
- [ ] Other: _____

What municipality or area do you represent?

Jefferson County

## What are your priorities for preservation?

What types of historic resources concern you most?

| | Low Concern | Medium Concern | High Concern |
|---|---|---|---|
| Historic homes | ○ | ○ | ◉ |
| Historic businesses | ○ | ◉ | ○ |
| Historic districts | ○ | ○ | ◉ |
| Religious institutions | ○ | ◉ | ○ |
| Educational institutions | ○ | ◉ | ○ |
| Cultural gathering places | ○ | ◉ | ○ |
| Agricultural complexes | ○ | ◉ | ○ |
| Industrial complexes | ◉ | ○ | ○ |
| Landscapes | ○ | ◉ | ○ |
| Engineering structures | ○ | ◉ | ○ |
| Archeology | ○ | ○ | ◉ |
| Archives | ○ | ○ | ◉ |
| Interpretive markers | ○ | ○ | ◉ |

What threats to historic preservation concern you most?

| | Low Concern | Medium Concern | High Concern |
|---|---|---|---|
| Floods and natural disasters | ○ | ○ | ◉ |
| Urban sprawl | ○ | ◉ | ○ |
| Highway development | ○ | ◉ | ○ |
| Flood control projects | ○ | ○ | ◉ |
| Demolition | ○ | ○ | ◉ |
| New development | ◉ | ○ | ○ |
| Inappropriate alterations | ○ | ◉ | ○ |
| Neglect | ○ | ○ | ◉ |
| Vacancy | ○ | ○ | ◉ |

What are the most important measures of success for a preservation plan?

| | Low Importance | Medium Importance | High Importance |
|---|---|---|---|
| More survey | ○ | ○ | ◉ |
| More designations | ○ | ◉ | ○ |
| Fewer demolitions | ○ | ○ | ◉ |
| Fewer vacancies | ○ | ○ | ◉ |
| More rehabilitation | ○ | ◉ | ○ |
| More awareness | ○ | ○ | ◉ |

How can the Jefferson County Historical Commission effectively support preservation?

Conduct follow-up surveys

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ○ | ○ | ◉ | Highly effective |

Share and update survey data using an online system

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ○ | ○ | ◉ | Highly effective |

Create new Official Texas Historical Markers

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ○ | ○ | ◉ | Highly effective |

Help list historic properties on the National Register

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ○ | ○ | ◉ | Highly effective |

Comment and consult on development projects that impact historic buildings

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ○ | ○ | ◉ | Highly effective |

Provide property tax abatement for historic properties

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ◉ | ○ | ○ | Highly effective |

Offer grants for maintenance of historic properties

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ○ | ◉ | ○ | ○ | Highly effective |

Offer technical assistance and legal assistance for owners of historic properties

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ◉ | ○ | ○ | ○ | Highly effective |

Host festivals and events that promote preservation

| | 1 | 2 | 3 | 4 | 5 | |
|---|---|---|---|---|---|---|
| Not effective | ○ | ◉ | ○ | ○ | ○ | Highly effective |

Publicize preservation successes across the County

# APPENDIX C: PRESERVATION RESOURCES TOOLKIT

Preservation is a multi-layered and complex field that is built upon a variety of programs and policies. It relies on individuals with a wide range of experience and includes people from many areas of expertise and fields from history and architecture to planning, finance, and public policy. Indeed, preservation means different things to different people, all of whom desire to pursue certain actions suited to their particular needs that fall under the broad heading of "historic preservation."

Empowering people with tools and guidance to learn more about specific steps helps ensure the advancement of preservation in Jefferson County. This toolkit aims to answer common questions encountered when beginning a preservation project. The sources of information within the toolkit represent some of the most reliable, common, and relevant tools available – written in accessible language and intended for both professional preservationists and the general public. These sources of information aim to help anyone interested in beginning a preservation project from designation to tax incentives to the nuts-and-bolts of maintaining historic buildings. A guide for navigating the toolkit is presented below in table C-1.

*Table C-1. Guide for navigating this toolkit (Appendix C). Note that the "Question" column provides a hyperlink to the relevant section.*

| 8. | Where can I find information about the sustainability of historic preservation? | Page C-10 |
| 9. | How can I apply for grants and financial aid for preservation projects? | Page C-11 |
| 10. | How can I participate in the Section 106 consultation process for federal projects? | Page C-13 |
| 11. | How can I learn more about the role of archeology in the preservation process in Texas? | Page C-13 |
| 12. | How can I research the history of a specific property in Jefferson County? | Page C-13 |
| 13. | How to learn more: additional online resources and references | Page C-13 |

**A note about online sources**

In the modern era, the internet functions as the primary means for most people to conduct research and obtain information, and this resource can be accessed from the comfort and convenience of homes or workplaces. A few keystrokes at a search engine website, such as Google, will identify seemingly countless sources of information about a variety of both general and specific preservation topics. The results, however, may be overwhelming. To that end, this section provides guidance to learn about some of the most common preservation-related activities.

Please note that the sources and internet links (noted as underlined blue text) in this section functioned at the time this report was prepared. These links may change over time. If the hyperlinks do not function, please use an internet search engine such as Google using appropriate key words or contact the program or sponsor for the appropriate subject.

## 1. How do I contact the Jefferson County Historical Commission and CLG?

Current contact information for the Jefferson County Historical Commission and CLG are provided below.

- Current phone number: 409-835-8701
- Current website: https://co.jefferson.tx.us/historical_commission/home.html
- Current CHC email: histcomm@jeffcotx.us
- Current CLG email: jennifer.trenbeath@jeffcotx.us

- Current mailing address: 1149 Pearl Street, Third Floor, Beaumont, Texas 77701

## 2. How do I determine if a property is already designated as historic?

- Explore the *Texas Historic Sites Atlas*[1] website that the Texas Historic Commission maintains to show previous historic designations. The *Atlas* is a GIS-based interface that plots the locations of most state-designated historic properties. The information can be viewed on a map or listed by name and address by searching keywords and applicable designation(s).
    - For NHLs, the *Atlas* has a predefined filter that can be viewed at the following website: https://atlas.thc.texas.gov/AdvancedSearch/NHLIndex
    - For NRHP listings, the *Atlas* has a predefined filter that can be further refined by selecting "Jefferson" from the box identified "County" or by any other relevant search parameter, such as "City." To initiate this search, view the following website: https://atlas.thc.texas.gov/AdvancedSearch
- Refer to the inventory appendix within the Historic Resources Survey Report prepared in tandem with this Historic Preservation Plan. The appendix identifies known designated historic properties from multiple sources. Since it was compiled for this preservation plan, with time, the inventory is subject to change once new properties are subject to designation. The final survey report will be posted on the CHC website (https://co.jefferson.tx.us/historical_commission/home.html).
- Check the Jefferson County Historical Commission website for an interactive digital map with updates to the historic resources inventory (https://co.jefferson.tx.us/historical_commission/home.html). The CHC intends to create, host, and regularly update the digital map as part of the implementation of this preservation plan.
- Refer to your local municipality.
- Contact the Jefferson County Historic Preservation and Archives Officer (contact information above).

## 3. How can I learn about municipal preservation policies in Jefferson County?

Within Jefferson County, the municipalities of Beaumont and Port Arthur are independent CLGs and maintain independent historic preservation codes and ordinances, as linked below:

- Beaumont
    - City of Beaumont Planning Department: https://beaumonttexas.gov/departments/community-development/planning/
    - Historic Landmark Commission: https://beaumonttexas.gov/departments/community-development/planning/historic-land-commission/
    - Economic Design Incentives for Downtown Beaumont, including Historic Preservation Loan Program guidelines: https://beaumontmainstreet.org/wp-content/uploads/2021/04/overview-of-invcentives-offered.pdf
    - Code sections related to historic preservation: https://ecode360.com/BE6239/search?query=historic&scope=all&sortOrder=relevance&selections=
- Port Arthur
    - City of Port Arthur Development Services Department: https://library.municode.com/tx/port_arthur/codes/code_of_ordinances?nodeId=PTIICOOR_CH14BOAUCOCO_ARTXIHILACO

[1] https://atlas.thc.state.tx.us/.

- Code sections related to historic preservation: https://library.municode.com/tx/port_arthur/codes/code_of_ordinances?nodeId=PTIICOOR_CH14BOAUCOCO_ARTXIHILACO

## 4. How do I seek appropriate historic designation for a property?

Owners of historic properties can choose from a variety of designations issued at the national, state, and local levels. Each designation has its own requirements, eligibility criteria, and application processes. See figure C-1 below for an overview of most state-sanctioned historic designations and associated benefits.

- **National Historic Landmarks** (NHL) possess national significance and illustrate the nationwide impact of events or persons associated with the property, its architectural type or style, or information potential. The following provide instructions to get this type of designation:
  - Overview - https://www.nps.gov/orgs/1582/index.htm
  - Process - https://www.nps.gov/subjects/nationalhistoriclandmarks/nomination-process.htm
  - Instructions - https://www.nps.gov/subjects/nationalhistoriclandmarks/nhl-bulletin.htm\
- **National Register of Historic Places** (NRHP) is a federal program administered in our state by the THC in coordination with the National Park Service (NPS). The following provide instructions to get this type of designation:
  - Overview - https://www.thc.texas.gov/preserve/designate-historic-properties/national-register-historic-places
  - Process - https://www.thc.texas.gov/preserve/designate-historic-properties/national-register-historic-places/national-register-process
- The NPS provides a series of *National Register Bulletins* designed to guide efforts to complete NRHP nominations. A selected list of *Bulletins* is provided in table C-2. For a complete list, go to: https://www.nps.gov/subjects/nationalregister/publications.htm
- **Recorded Texas Historic Landmarks** (RTHL) are buildings at least 50 years old that are judged worthy of preservation for their architectural and historical associations. It is a state-level program administered by the THC. The following provide instructions to get this type of designation:
  - Overview - https://www.thc.texas.gov/preserve/designate-historic-properties/recorded-texas-historic-landmarks
  - Process - https://beaumontmainstreet.org/wp-content/uploads/2021/04/overview-of-invcentives-offered.pdf
- **Historic Texas Cemeteries** (HTC) are designated cemeteries or burial sites that are at least 50 years old and are worthy of preservation for their historical associations. It is a state-level program administered by the THC. The following provide instructions to get this type of designation:
  - Overview - https://www.thc.texas.gov/preserve/designate-historic-properties/historic-texas-cemetery-designations
  - Process - https://www.thc.texas.gov/sites/default/files/2023-12/HTC_Guidelines_Instructions_2024.pdf
- **Local Landmarks and Historic Districts** are designated by municipalities. Currently, the only municipalities in Jefferson County with ordinances enabling designation of local landmarks and historic districts are Beaumont and Port Arthur. See municipal information under Question #3 above.

## Methods of Protecting Historic Property: Comparison Chart

Updated June 2018

LEGEND

● = yes, comment applies to column heading

O = no, comment does not apply

| | Comments | Preservation Easement or Covenant | Historical Designations & Markers: State Antiquities Landmark (SAL) | National Register of Historic Places (NR) | Recorded Texas Historic Landmark (RTHL) | Educational Subject Markers | Historic Texas Cemetery* (HTC) |

## 5. How do I take advantage of preservation tax incentives?

All levels of government have some type of tax-based incentives to encourage historic preservation, primarily as tax credits. Property owners must adhere to the particular requirements of each program, and coordination with reviewing staff at the earliest possible stage of any rehabilitation will greatly improve the chances of success and ensure compliance. As possible, seek out advice and preliminary input from reviewing authorities during early planning phases before the project gets too far along to avoid or minimize costly modifications and/or delays to adhere to applicable provisions.

- The NPS offers guidance about the federal tax credit program, which is a collaborative effort that the NPS undertakes with State Historic Preservations Offices, such as the THC.
    - *Tax Incentives for Preserving Historic Properties* – describes the program at the federal level; for a brochure that summarizes the incentives, go to: https://www.nps.gov/tps/tax-incentives/taxdocs/about-tax-incentives-2012.pdf
    - *Before You Apply* – provides instructions and strategies for taking advantage of federal tax credits that can be viewed at the following website: https://www.nps.gov/subjects/taxincentives/before-apply.htm. Among the topics explain are the following:
        - Eligibility requirements
        - Qualified expenses
        - IRS information
- The THC maintains a website that presents an overview of federal, state, and local tax incentives for owners of historic properties. For more information, go to: https://www.thc.texas.gov/preserve/projects-and-programs/preservation-tax-incentives. Topics include:

  - *About Preservation Tax Incentives* – contains useful background information. For more information, go to: https://www.thc.texas.gov/preserve/projects-and-programs/preservation-tax-incentives/about-preservation-tax-incentives
  - *Federal Historic Preservation Tax Incentives Program* – offers an income tax credit worth 20 percent of the eligible rehabilitation costs of historic, income-producing buildings. For more information, go to: https://www.thc.texas.gov/federal-rehabilitation-tax-credit-program
  - *Texas Historic Preservation Tax Credit Program* – offers a tax credit equal to 25 percent of eligible rehabilitation costs for qualifying historic buildings. For more information, go to: https://www.thc.texas.gov/preserve/projects-and-programs/preservation-tax-incentives/texas-historic-preservation-tax-credit
  - *How to Submit* – describes the process of submitting documentation for the THC to review tax credit applications for review and approval. For more information, go to: https://www.thc.texas.gov/preserve/projects-and-programs/preservation-tax-incentives/how-submit
  - *Tax Credit FAQ* – commonly asked questions about preservation tax credits. For more information, go to: https://www.thc.texas.gov/preserve/projects-and-programs/preservation-tax-incentives/tax-credit-programs-faq
- Multiple municipalities also offer tax incentives. Refer to municipal contact information above.

## 6. Where can I find information about the economic benefits of preservation?

Various studies have examined the many economic benefits of historic preservation and the way in which it has supported economic development and revitalization efforts across the nation. The THC has been a national leader in the development of detailed analyses that examine the subject in quantitative and data-driven terms. In addition, other national preservation-advocacy groups have also undertaken similar studies that showcase how successful historic preservation can be as a positive force in economic development and revitalization. The following are samples of some of the best known and relevant studies that have been undertaken in recent years.

- The THC has prepared multiple studies to examine how historic preservation has contributed to the state and local economies.
  - In 2015, the THC published "Economic Impact of Historic Preservation in Texas," which documented more than $4.6 billion in annual GDP and more than 79,000 jobs that can be attributed to historic preservation. To view the report, go to: https://www.thc.texas.gov/public/upload/publications/economic-impact-historic-preservation.pdf
  - "Historic Preservation at Work for the Texas Economy" is a publication that examines the economic impact of historic preservation in Texas. In 1999, the THC along with multiple cities including the City of Grapevine, as well as the Grapevine Heritage Foundation, funded the study – one of the early and most comprehensive efforts on the topic in the nation. The report is posted at the THC's website and can viewed at the following location: https://www.thc.texas.gov/public/upload/publications/EconImpact_wnote.pdf
  - "Economic Impact of Historic Preservation in Texas" is an update to the THC's 1999 report and provides still further evidence of the economic benefits of historic preservation in the state. To view the "Technical Analysis," go to: http://www.thc.texas.gov/public/upload/publications/economic-impact-technical-analysis.pdf

  - The Executive Summary of the report can be viewed by going to the following website: http://www.thc.texas.gov/public/upload/publications/economic-impact-historic-preservation.pdf

- The National Park Service assists with the implementation of programs that incentivize the economic benefits of preservation at the federal level and provides information at the agency's website: https://www.nps.gov/index.htm
  - "Tax Incentives for Preservation Historic Properties" explains the 20 percent income tax credit available for certified rehabilitation of income-producing properties that are listed in the NRHP. A discussion of these incentives can be viewed at: https://www.nps.gov/subjects/taxincentives/index.htm
  - The agency also provides an extensive list of Case Studies that highlight numerous tax-incentive projects that include a wide range of property types including neighborhood revitalization, industrial properties, affordable housing, buildings in continued historic use, and buildings rehabilitated into new uses. To choose from a selection of case studies, go to: https://www.nps.gov/subjects/taxincentives/case-studies.htm
- The National Trust for Historic Preservation[2] (NTHP) is a private, non-profit, preservation-advocacy organization that has been quite active promoting the economic benefits of historic preservation and has published numerous studies.
  - "Preservation Basics: Preservation Revolving Funds" is an NTHP publication, published in 1993 and updated in 2006, that examines how the use of a revolving fund can create a pool of capital to preserve and protect historic properties. To view the publication, go to: https://www.slideshare.net/PreservationNation/fj-revolving-fund-book
  - The "Opportunity Zone Resource Roundup" is a collaborative effort by the NTHP and the National Main Street Center that presents a list of useful articles and webinars on a variety of topics touting the economic benefits of historic preservation. For more information, go to: https://ntcic.com/news-blog/opportunityzoneroundup-2/
- The Advisory Council on Historic Preservation[3] (ACHP) is another federal agency involved with historic preservation. Among its most noteworthy reports is "Measuring Economic Impacts of Historic Preservation: A Report of the Advisory Council on Historic Preservation" by Donovan Rypkema and Caroline Cheong. This report studies the national economic impact of historic preservation and how "historic preservation has become a fundamental tool for strengthening American communities." Since its original publication in 2011 (updated in 2013), it has proven to be an effective tool for a wide range of public goals including small business incubation, affordable housing, sustainable development, neighborhood stabilization, center city revitalization, job creation, promotion of the arts and culture, small town renewal, heritage tourism, economic development, and others. To view the report, go to: https://www.achp.gov/sites/default/files/guidance/2018-06/Economic Impacts v5-FINAL.pdf
- PlaceEconomics[4] is a nationally known private consulting firm that has undertaken numerous studies and analyses that show the economic benefits of historic preservation across the country including such topics as:
  - Downtown revitalization
  - Economic impact studies
  - Historic preservation incentives
  - Sustainable development
  - Tax credit studies

## 7. Where can I find technical information and guidance about how to appropriately rehabilitate a historic property?

Knowing how to undertake projects that are respectful to the qualities and character of historic buildings is a popular topic among private property owners, public officials, developers, architects, contractors, and others. The following represent some of the best-known publications that provide technical guidance to ensure that work is undertaken in a manner that is consistent with widely accepted preservation guidelines and standards and in compliance with tax-based incentives.

The NPS maintains a website entitled "Historic Preservation Standards and Guidelines" that provides critical guidance for those in both the public and private sectors to undertake a variety of preservation-related projects. For more information, please go to:
https://www.nps.gov/subjects/historicpreservation/standards.htm

- The *Secretary of the Interior's Standards for the Treatment of Historic Properties* have provided the most complete and thorough guidance for preservation-related work on historic buildings. They offer broad strategies to ensure that these buildings retain their most important and salient physical qualities. They provide a degree of flexibility to consider the countless subtle and sometimes not-so-subtle issues that property owners, architects, contractors, and those in the building trades may encounter. Moreover, the standards are designed to ensure that buildings can be adapted to modern uses and conveniences. A copy of the document can be viewed at: https://www.nps.gov/orgs/1739/upload/treatment-guidelines-2017-part2-reconstruction-restoration.pdf
- The Technical Services Branch of the NPS has prepared a series of *Preservation Briefs* that provide detailed guidance on the preservation, rehabilitation, and restoration of historic buildings. The briefs include topics involved with specific architectural features, finishes, and materials as well as additions, signage, HVAC systems and landscapes. A selected list of the 50 published Preservation Briefs is presented in table C-3. For a complete list, go to: https://www.nps.gov/orgs/1739/preservation-briefs.htm
- The Technical Services Branch of NPS also has developed a set of Interpreting the Standards Bulletins, aimed to clarify interpretation of the Secretary's Standards for common rehabilitation issues. A full list of Interpreting the Standards Bulletins is available at: https://www.nps.gov/orgs/1739/its-bulletins.htm

*Table C-3. Selected list of NPS Preservation Briefs.*

## 8. Where can I find information about the sustainability of historic preservation?

A common adage among preservationists is that "the greenest building is the one that isn't in the landfill." Many historic buildings were designed with intrinsically sustainable features, like passive heating and cooling. In addition, historic buildings embody generations' worth of energy used for construction and maintenance – energy that would be lost and then have to be recreated in a demolition and reconstruction project. A number of preservation organizations have published information documenting the sustainability features of historic buildings, as set forth below.

### SUSTAINABILITY INFORMATION FROM THE NATIONAL PARK SERVICE

*Table C-4. Additional information on sustainability and historic preservation from the National Park Service.*

## 9. How can I apply for grants and financial aid for preservation projects?

Most of the financial assistance for preservation is based on a market-driven approach that offers tax-based incentives to help offset rehabilitation costs. However, some grants are available to the public, but keep in mind that this funding source is limited and highly competitive. Moreover, grants typically are allocated for projects that fit within narrow parameters and support a particular strategic or long-term goal.

- Seek CLG grants from the THC. Jefferson County is eligible for such funding. For more information, go to: https://www.thc.texas.gov/review/certified-local-government/certified-local-government-grants
- If your local municipality does not have CLG status, consider applying for CLG status, taking advantage of the resources below to guide the process:
    - CLG Reference Center – https://www.thc.texas.gov/review/certified-local-government/certified-local-government-reference-center
    - Sample Historic Preservation Ordinance – https://www.thc.texas.gov/public/upload/publications/ModelHis.pdf
- Seek a grant from the THC's *Texas Preservation Trust Fund* (TPTF), which provides funds for eligible historic structures, archaeological sites, and heritage education projects. For more information, go to: https://www.thc.texas.gov/preserve/projects-and-programs/texas-preservation-trust-fund

- Seek funding for a local Main Street Program. For more information, go to: https://www.thc.texas.gov/public/upload/publications/Funding a Local Main Street Program 2013 version.pdf
- Contact the Jefferson County Economic Development staff[5] to discuss using funds from the US Department of Housing and Urban Development (HUD) or Hotel Occupancy Tax funds. For more information, go to: https://www.Jeffersoncounty.com/en/commissioner-3/programs-and-initiatives/economic-development.html
- Seek a grant from the Community Development Block Grant (CDBG) Program, a federal initiative that allocates money to local governments to undertake projects designed to meet the needs of each community. CDBG monies are often used for local housing departments and often target residences in older neighborhoods. A guide from HUD shows "historic preservation can be linked to other eligible activity under Community Development Block Grant Program. The publication focuses on the broad range of historic preservation activity that may be assisted under the CDBG program, not only to save historic structures but to use them in promoting economic development, neighborhood revitalization and the conservation of energy resources as well." For more information, go to: https://www.hudexchange.info/resources/documents/historic-preservation-in-housing-anC-community-development.pdf
- The NTHP offers funds to "encourage preservation at the local level by providing seed money for preservation projects." For more information, go to: https://savingplaces.org/grants
- Seek the African American Cultural Heritage Action Fund, sponsored by the NTHP, which awards funds for interpreting and preserving African American cultural heritage. For more information, go to: https://savingplaces.org/african-american-cultural-heritage
- Seek grants from other sources from the THC's "Grants, Tax Credits, and Funding," which includes informational instructions as well as specific grant opportunities. For more information, go to: http://www.thc.texas.gov/preserve/projects-and-programs/museum-assistance/grants-funding

## 10. How can I participate in the Section 106 consultation process for federal projects?

When crafting the National Historic Preservation Act of 1966, Congress included a provision (Section 106 of the act) that mandated public involvement on federally funded, permitted, or licensed projects that have the potential to have an effect on historic properties. This provision has since become known as the Section 106 Process and is a routine step that agencies such as the Texas Department of Transportation and the US Army Corps of Engineers undertake on a regular basis.

- The ACHP has been active in assisting with the Section 106 Process and has sought to encourage greater public outreach to sponsors of projects that trigger Section 106 reviews, as well as engagement of the general public to encourage their input and participation on project review and comment. The ACHP provides a summary of the Four-Step Review Process associated with the Section 106 Process as a handout that can downloaded at the following website: https://www.achp.gov/sites/default/files/2019-10/106%20Flow%20Chart%20Handout.pdf
    - "A Citizen's Guide to Section 106 Review" is a publication that the ACHP prepared to explain the Section 106 Process to the public. It is written in non-technical and easy-to-understand terms and provides useful sources of information for reference and education. A copy is available at: https://www.achp.gov/sites/default/files/documents/2017-01/CitizenGuide.pdf

[5] https://www.Jeffersoncounty.com/en/administration/staff/economic-development-coordinator.html.

  - ACHP Section 106 Classroom Courses[6] lists workshops and seminars that are open to those in both the public and private sectors to learn more about the Section 106 Process.
- The National Preservation Institute (NPI) offers training on a variety of topics for those involved in the management, preservation and stewardship of cultural heritage. Their website "Protecting the Past Through Preservation"[7] identifies opportunities to attend regional workshops, including those devoted to Section 106, that are held across the nation.

## 11. How can I learn more about the role of archeology in the preservation process in Texas?

- The Texas Historical Commission leads archeology efforts in Texas. A table listing archeological resources published by the Texas Historical Commission is presented in table C-6.
- The Texas Historical Commission helps organize a network of volunteer "Archeological Stewards" across the state. To find a steward near you, contact the THC's Archeology Division by calling (512) 463-6096, or write to Archeology Division, Texas Historical Commission, P.O. Box 12276, Austin, TX 78711-2276.
- The Texas Archeology Society, based at Texas State University, provides additional materials and training workshops. Details are provided at https://www.txarch.org/.

## 12. How can I research the history of a specific property in Jefferson County?

Individual property owners and local historians may seek to research specific properties in Jefferson County. Repositories and sources likely to yield information are listed in Table C-7 below. Note that recommendations regarding eligibility for historic designation in the accompanying Historic Resources Survey report were based on windshield- or reconnaissance-level survey only, and new research findings may suggest that additional properties are eligible for National Register listing and/or local designation. If research reveals that a specific property is associated with a significant historic individual or event, contact the Jefferson County Historical Commission so that they may update the online survey database accordingly.

# APPENDIX D: PRIORITIZED NATIONAL REGISTER RECOMMENDATIONS

As noted above under Action Item 3-1, this historic preservation plan recommends listing eligible resources in the National Register according to the following prioritized tiers:

- Tier A: Commercial, industrial, and non-profit properties are given highest priority since National Register listing will enable access to federal and/or state preservation tax credits (as detailed in Appendix C).
    - Tier A-i: Multi-property district nominations are prioritized first, in order to provide access for the greatest number of property owners.
    - Tier A-ii: Individual properties are prioritized next.
- Tier B: Public properties are given second priority for National Register nomination. Although typically not able to access federal or state tax credits, these properties often hold value for a large number of people, and National Register nomination can have significant benefits for education and public engagement.
    - Tier B-i: District nominations are prioritized first within this tier.
    - Tier B-ii: A multi-property submission for Post-World War II Public Buildings of Jefferson County is given second priority within this tier.
    - Tier B-iii: Individual properties are prioritized next.
- Tier C: Residential properties are placed within the third priority level for National Register nomination. Although owner-occupied residences are not eligible for federal and/or state preservation tax credits, rental residences or home offices may be eligible (as further detailed in Appendix C).
    - Tier C-i: District nominations are prioritized first within this tier.
    - Tier C-ii: Individual properties are prioritized next.

Table D-1 below provides a list of recommended National Register nominations, prioritized according to these tiers. Additional information regarding each recommended nomination is provided within the accompanying Historic Resources Survey Report.

*Table D-1. Prioritized list of National Register nominations.*

| Tier | City | District Name/ Address | Property Type(s) | Subtype(s) | Year(s) built |
